Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)		
Violation Notes:			

Returned to compliance on 03/01/2022. No training records were available for review. Provide documentation on training being conducted for the past 1-3 years.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date:	06/02/2021	Violation Source:	CERS
Violation Program:	HW	Violation Division:	Riverside County Department of Env Health
Citation:	40 CFR 1 265.201(c)(5) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.201(c)(5)		
Violation Notes:			

Returned to compliance on 07/13/2021. OBSERVATION: Observed floor stains and absorbent on the side of the stationary tank holding used antifreeze. CORRECTIVE ACTION: Owner/operator shall correct any deficiencies observed during weekly hazardous waste storage area inspections. Eliminate the stains and absorbent on the floor in an approved manner.

Violation Description:

Failure to inspect hazardous waste tanks for the following, when present:
 4) The construction materials of the tank at least weekly to detect corrosion or leaking of fixtures or seams.
 5) The construction materials of, and the area immediately surrounding, discharge confinement structures (e.g., dikes) at least weekly to detect erosion or obvious signs of leakage (e.g., wet spots or dead vegetation).

Title Description Comments:	

VJB rec'd inquiry from Brad Schlack (Spyglass Investment Grp)RE: cleanup status - VJB returned call - left message w/add'l site details and info. on Admin Review process. Rec'd f/u call indicating that he would arrange file review, but also wanted to discuss estimated cost associated with resolution of "environmental concerns". VJB conducted cursory review of available data and left message w/add'l detail on project uncertainties - no recent data - LPH present, soil/GW impacts remain unabated to date, VES pilot test data suggest substantial mass in soil - any development plan should anticipate encountering PHC-impacted soils and plan accordingly for soil mgmt/worker exposure during grading/excavation. Please call if you require add'l information.

Title Description Comments:						
VJB spoke w/Cindy Li to get an update on the status of lawsuits, appeals & community protest related to proposed Chinatown development. Appeal court recently ruled that the Co.'s sale to Jacobs development was legal, so he will retain ownership/right of property development, explains recent promise of cooperation/compliance moving fwd. Note - CEQA docs were determined inadequate - a revised EIR and noticing/comment period are req'd - timeframe & deadlines not established, presumably Jacobs large-scale development project (including C/U site) will hinge on approval of EIR. Cindy will provide add'l update.

Title Description Comments:						
Rec'd email & voice message from Carl (CMH) - RP trust group has paid outstanding debt for previous work and purports to have authorized monies for a comprehensive summary report (req'd 2+ yrs ago) to document periodic efforts of site activity, including LPH removal and GWS. The report will also contain VES information from brief period of operation in 2008. Carl will also provide recommendations w/respect to future corrective action and previously-required/approved SA. RB did not set deadline because they are never met, CMH committed to completing the submittal w/in next few weeks with follow-up mtg. tentatively slated for Oct-end.

Resolution - case evaluation, RP recalcitrant followup &/or enforcement likely req'd to advance C/U.

Action Type: Other Regulatory Actions
Action: File review
Action Date: 4/16/2009
Received Issue Date: 4/16/2009
Doc Link:
Title Description Comments:

Verbal Communication Spoke w/Doug Jacobs (buyer/developer) 951-788-9887- he still intends to proceed w/development and front C/U costs once legal challenges are resolved. He described legal actions/injunctions by opponent group and other issues (CEQA), etc. and expects favorable decision shortly after 6/28 court date. He is requesting more time/extension. He says Betsy has no \$\$\$ and he doesn't want to incur any add'l costs until project is approved/finalized - essentially not motivated to proceed w/any outstanding RB requirements - not even GH2O event. Until GH2O event & add'l assessment are completed and VES is operational, site considered noncompliant.

Work Plan Transmittal & Scope/Proposal

Action Type: Other Regulatory Actions
Action: Meeting
Action Date: 10/12/2017
Received Issue Date: 10/12/2017
Doc Link:
Title Description Comments:

VJB met with IWS (Jim Bunck), Advanced Geo (Rob Loeffler) and court-appointed receiver (Kevin Randolph - Grisham-Savage Law) - conducted site inspection. VES system removed from site, extraction well manifold remains in place - many VES wells/well boxes observed to be damaged - the status of most existing GW wells is also unknown. VJB informed IWS/AdvGeo of most recent report/verbal account by CHJ (Nov 2016), - 3+ feet of LPH was observed in source well MW-1. Discussed outstanding agency directives for GWS, LPH removal and add'l assessment & well replacement activities (e. g. MW-2/MW-5). Phase 1 - IRAP scope (Wells 1, 2, 3, 4, 5, 6, 7, 14, 16 & 17) was installed/tested - discussed VES lab data (no report)- Phase 2 construction (7 wells) was never completed. IWS will inspect all existing wells/monitoring points and submit a proposal for well rehabilitation activities and GW monitoring/sampling scope.

Title Description Comments:						
VJB rec'd email that was forwarded by City - RP Trustee (Mathew Shea) will assume role as primary contact replacing Rachel Wahl - purports to have contracted with CHM Enviro. (Carl Hulick) to address outstanding City code violations and progress cleanup under RWQCB oversight, but similar promises have been made in past - stay tuned....!!

Title Description Comments:						
VJB/Rob conducted site visit - based on visual inspection, SVE-9 thru SVE-13 & SVE-18 are present. The wells were apparently installed and then cold patched with asphalt to protect the points for future connection to system manifold/piping. Per discussion w/Rob, these SVE wells will be recovered during the next field visit and one or more may be incorporated as observation points during upcoming remedial test scope. Also, proposed well MW9 may be relocated north, to evaluate impacts proximate former USTs (2K/6K - gas) located immediately south of site office/bldg. Rob will send a follow-up email to memorialize scope changes.

Title Description Comments:						
VJB spoke w/Rob (AGE) re: GWSA & VES test Work Plan - requested supplemental info./revisions - Rob will forward early next week. Rob also reported that the RP rep/Receivership (Grisham Savage) has been working to get a reassignment of USTCF claim to facilitate future assessment/cleanup activities. If/when the property is sold, GS will remain point-of-contact for CU project.

4th Quarter 2018 Semi-Annual GWS Report

Action Type: Other Regulatory Actions

Action: Meeting

Action Date: 11/8/2016

Received Issue Date: 11/8/2016

Doc Link:

Title Description Comments:

Met w/Ann Lauder milk (CHJ Consultants) to discuss available site data and CU status (or lack thereof) - her company was asked (by Mr. Jacobs) to evaluate site conditions & estimate cleanup cost. We discussed need for further characterization/delineation, GW monitoring & source removal - only phase 1 wells were ever connected to VES system and very brief system operation completed to date - no formal report to document VES or periodic LPH removal. As part of her review/scope, Ann recently visited the site and gauged/inspected existing GW wells - 3+ feet of LPH was reportedly observed in MW-1 - UGH!!! Any scope of CU is beyond CHJ's expertise as geotechnical firm - so she intends to recommend that Mr. Jacob contact another firm w/site CU experience, if he is interested in the property. While Mr. Jacob's has reportedly been "under contract" to purchase the property from Campbell Trust for quite some time, he has not done so due to the legal issues and enviro. impacts issues related to adjacent Chinatown property. As such, Jacobs is not currently a recognized RP - he is neither an owner or discharger - NOT eligible for USTCF or SCAP \$\$\$\$. If he bought the site he would be considered a new viable RP by SA-RWQCB (per CA Water code), which is probably why he has not done so to date.

Action Type: Other Regulatory Actions

Action: File review

Action Date: 11/7/2016

Received Issue Date: 11/7/2016

Doc Link:

Title Description Comments:

VJB rec'd follow-up inquiry from Gary Merk (City - code enforcement) - he was informed by Fire Prevention that the site was an open CU case - he wanted to know if site bldgs. could be safely demo'd to address code issues/vagrancy - also asked about agency's authority to "force" necessary CU, since RP has failed to cooperate voluntarily. VJB provide detailed response re: status, agency authority under CA water code, etc. Site demo could be completed to address code issues, but would need to be done with care not to damage existing VE/GW wells, which still have future value for CU activities/monitoring.

Action Type: Other Regulatory Actions

Action: File review

Action Date: 10/19/2016

Received Issue Date: 10/19/2016

Doc Link:

Title Description Comments:

VJB rec'd email inquiry from Tracy Shaw (City of Riv - fire prevention) - she recently visited property, cited for numerous code violations - conducted inspection and noted existing wells. She would like more info. on site status, as she needs to follow up with City attorneys, who may be considering taking legal action to obtain receivership (acquisition), as means to address repeated/ongoing code violations. - sent detailed email response re: open/active "unremediated" site, recalcitrant RP, etc.and provided add'l info on GEIMS link & file review process

Violation Description:

Failure to comply with one or more of the following: failure to install a spill bucket, have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and/or be resistant to galvanic corrosion.

Violations

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Violation Date: 03/04/2021
Violation Program: UST
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Notes:

Returned to compliance on 03/04/2021. OBSERVATION: Observed that Designated Operator inspections are being improperly performed. DO reports shall be conducted every 30 days. The month of September 2020 was not in the UST binder, therefore there is no record of this occurrence. CORRECTIVE ACTION: Owner/operator shall ensure that the Designated Operator is properly conducting inspections, noting observations, reviewing paperwork and alarm history reports, attaching required documentation and any other DO required functions. Discuss this missing report with the DO, if it occurred, place a copy in the UST binder. Document this discussion and the outcome thereafter.

Violation Description:

For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO.
Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy.
Inspect for the presence of liquid/debris in spill containers.
Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly.
Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit.
Check that all testing and maintenance has been completed and documented.
Verify that all facility employees have been trained in accordance with 23 CCR 2715(c).
For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes:

Returned to compliance on 03/23/2022. OBSERVATION: Observed the UST Monitoring Plan on site with inaccurate information. Observed UST Monitoring Plan for Tank ID #60964197 (30,000 diesel tank) to be inaccurate and/or missing information. The monitoring plan states YES for suction piping, however, the system is under pressure. The UST Monitoring Plan is not approved as submitted. CORRECTIVE ACTION: Owner/operator shall

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

maintain a current UST Monitoring Plan on site that has been accepted in CERS and make available for review.

Violation Description:

Failure to comply with any of the applicable requirements of the permit issued for the operation of the UST system.

Violations

Violation Date: 03/21/2022
Violation Program: UST
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Notes:

OBSERVATION: Observed WEST diesel (5,000 gallon tank) spill bucket to be leaking and would not hold liquid. CORRECTIVE ACTION: Owner/operator shall repair/replace the leaking WEST diesel spill bucket so that bucket is able to hold liquid and contain release until detected.

Violation Description:

"Failure to meet one or more of the following requirements:

Install or maintain a liquid-tight spill container.

Have a minimum capacity of five gallons.

Have a functional drain valve or other method for the removal of liquid from the spill container.

Be resistant to galvanic corrosion.

Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container.

Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer.

Tested by a certified UST service technician.

Maintain records of spill containment testing for 36 months.

"

Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)		
Violation Notes:			

Returned to compliance on 03/04/2021. OBSERVATION: Observed the Audible and Visual alarm to not alarm, when testing the ATG Probe. The alarm was detected at the Veeder Root, but did not signal the light or bell. CORRECTIVE ACTION: The technician repair the functionality of both A/V alarms at the time of this inspection.

Violation Description:

Failure to comply with one or more of the following overfill prevention equipment requirements:
 Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
 Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
 Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
 Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018.

For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter.

For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter.

Inspected within 30 days after a repair to the overfill prevention equipment.

Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer.

Inspected by a certified UST service technician.

Maintain records of overfill prevention equipment inspection for 36 months.

operator. The list of DO trained employees reflect last training date of 3/22/2017. CORRECTIVE ACTION: Owner/operator shall provide list of employees trained by the designated operator and maintain on site readily available for review. Employees are required to be trained within 30 days of hire. Employees hired on/after 10/13/2018 are required to be trained before assuming their duties.

Violation Description:

Failure to maintain a list of employees trained by the designated operator on-site or off-site at a readily available location, if approved by the UPA. For training that occurs on or after October 1, 2018, failure to maintain a copy of the "Facility Employee Training Certificate" on-site or off-site at a readily available location, if approved by the UPA.

Violations

Violation Date: 03/09/2020
Violation Program: UST
Citation: 23 CCR 16 2666(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2666(f)
Violation Notes:

Returned to compliance on 10/26/2020. OBSERVATION: Observed no line leak detector installed on the 2 STP's of T3, the 30,000 gallon tank, therefore unable to trigger a visible and audible alarm when tested. CORRECTIVE ACTION: Owner/operator shall install the required leak detectors and certify that leak detector is capable of producing a visible and audible alarm.

Violation Description:

Failure of the functional line leak detector (LLD) to monitor at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 pounds per square inch and restrict or shut off the flow of product through the piping or triggers a visual and audible alarm.

Violations

Violation Date: 05/20/2019
Violation Program: UST
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Notes:

Returned to compliance on 09/24/2019.

Violation Description:

Failure to comply with one or more of the following overfill prevention equipment requirements:
Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018.

For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter.

For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter.

Inspected within 30 days after a repair to the overfill prevention equipment.

Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer.

Inspected by a certified UST service technician.

Maintain records of overfill prevention equipment inspection for 36 months.

Violations

Violation Date:	10/01/2019	Violation Source:	CERS
Violation Program:	UST	Violation Division:	Riverside County Department of Env Health
Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)		
Violation Notes:			

Returned to compliance on 10/01/2019.

Violation Description:

Failure to comply with one or more of the following overfill prevention equipment requirements:
Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018.

For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter.

For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter.

Inspected within 30 days after a repair to the overfill prevention equipment.

Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer.

Inspected by a certified UST service technician.

Maintain records of overfill prevention equipment inspection for 36 months.

For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements:
 Be performed by an ICC certified DO.
 Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy.
 Inspect for the presence of liquid/debris in spill containers.
 Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly.
 Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit.
 Check that all testing and maintenance has been completed and documented.
 Verify that all facility employees have been trained in accordance with 23 CCR 2715(c).
 For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Failure to electronically update business plan within 30 days of any one of the following events:
 A 100 percent or more increase in the quantity of a previously disclosed material.
 Any handling of a previously undisclosed hazardous materials at or above reportable quantities.
 A change of business address, business ownership, or business name.
 A substantial change in the handler's operations that requires modification to any portion of the business plan.

Violations

Violation Date:	09/15/2020	Violation Source:	CERS
Violation Program:	HMRRP	Violation Division:	Riverside City Fire Department
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)		
Violation Notes:			

Returned to compliance on 10/15/2020. No training records were available for review. Provide documentation on training being conducted for the past 1-3 years.

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date:	10/19/2020	Violation Source:	CERS
Violation Program:	HW	Violation Division:	Riverside County Department of Env Health
Citation:	22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12		
Violation Notes:			

Returned to compliance on 10/22/2020. OBSERVATION: Observed facility using EPA ID CAD981426257 which is not appropriate for this facility. This EPA ID# belongs to the Riverside Office of Education located at 4383 Tequesquite Ave Riverside, CA 92501 CORRECTIVE ACTION: Owner/operator shall obtain new/correct EPA ID number. Hazardous waste shall not be offered for transport until EPA ID is updated. Update CERS with new EPA ID# and resubmit.

Violation Description:

Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.

Violations

Violation Date:	10/19/2020	Violation Source:	CERS
Violation Program:	HW	Violation Division:	Riverside County Department of Env Health
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)		
Violation Notes:			

Returned to compliance on 10/19/2020. OBSERVATION: Observed incomplete labels on one 55 gallon liquid waste drum. CORRECTIVE ACTION: Owner/operator shall label hazardous waste containers with all the required information. Label shall include at least: the words ""hazardous waste"", generator name and address, accumulation start date, composition and physical state of waste, and hazardous property statement. Operator correctly completed the hazardous waste label at the time of this inspection. Note: This drum is full and requires immediate pick up, once EPA ID # is obtained.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Site History:

*****Data prior to 2005 not uploaded to GeoTracker. See Riv Co Environmental Health site file***** ****Site History/Release Information: July 1997 - Baseline investigation conducted. 8 soil borings (TDD1, TDD2, and TDD4 through TDD9) drilled near pump islands & USTs to 10 - 80 ft. Groundwater (GW) was encountered at 75 feet below ground surface (ft bgs) and borings TDD1 and TDD2 were completed as GW monitoring wells. Hydrocarbon-impacted soil was detected near USTs & dispensers with highest concentrations west of USTs in sample TDD2@20' (6900 ppm TPHg, 5.1 ppm benzene (B), 170 ppm toluene (T), 130 ppm ethylbenzene (E), 880 ppm xylenes (X). Highest MTBE concentration (20 ppm MTBE) was at south dispenser island in TDD7@5'. GW grab samples from TDD1 and TDD2 impacted with highest concentrations in TDD2 (37000 ppb TPHg, 600 ppb B, and <1000 ppb MTBE). Mar 1998 - Three 10,000-gallon gasoline USTs removed/replaced with two 20,000-gallon gasoline USTs. During UST replacements, 21 soil samples collected below USTs and at periphery of site. Max. concentrations detected in T4 from western end of UST cavity (23000 ppm TPHg, 140 ppm B, 610 ppm E, 390 ppm MTBE) and in P5 at east end of southernmost dispenser island (4200 ppm TPHg, 5.5 ppm B, 19 ppm E, and 25 ppm MTBE). Approx 1493 tons hydrocarbon-impacted soil excavated during UST removal activities. Site placed into LOP on May 27, 1998. ****Assessment: Feb/Mar 1999 - Further soil and GW assessment conducted to define extent of hydrocarbon impacts at the site. 6 soil borings (TOC-11 through TOC-16) drilled near dispensers, UST area and at periphery of site. TOC-11 to TOC-14 completed as GW monitoring wells. Highest soil impacts detected north of UST cavity (TOC-15) and north of northernmost dispenser island (TOC-16) with max. concentrations of: 4900 ppm TPHg (TOC-16@15'), 43 ppm B (TOC-16@50') and 7 ppm MTBE (TOC-15@20'). GW from all new monitoring wells impacted with maximum concentrations along eastern and southern property boundaries: 11000 ppb TPHg (TOC-14), 2500 ppb B (TOC-12), 310 ppb T (TOC-12), 330 ppb E (TOC-12), 710 ppb X (TOC-12), and 590 ppb MTBE (TOC-12). June 2000 - Two soil borings were drilled to 78 ft bgs on-site north and east of the dispensers (TOC-19, TOC-20) and two off-site gw monitoring wells (TOC-17, TOC-18) were installed in 14th Street west and south of the site. Maximum soil concentrations were detected below the water table: 3000 ppm TPHg (TOC-18@70'), 0.09 ppm B (TOC-20@70'), 2.83 ppm E (TOC-20@70'), and ND <0.01 MTBE. Highest GW concentrations were detected in TOC-18 with concentrations of: 11,600 ppb TPHg 629 ppb E and ND < 500 ppb MTBE. Based on the data, it appeared that the hydrocarbon source areas were in the northern portion of the UST area and several areas within the dispenser islands. Potential sources of the releases were stopped with the replacement of the UST systems in 1998. Oct 2001 - Eight on-site dual- and triple-nested vapor extraction (VE) wells were installed (VW-1s/d, VW-2 s/m/d and VW-3 s/m/d) and three off-site monitoring wells (TOC-21 to TOC-23) were installed south, southeast and west of the site. Maximum soil concentrations detected were: 25000 ppm TPHg (VW-3@15') 7.31 ppm benzene (VW-3@65.5') and 2.78 ppm MTBE (VW-2@26.5'). GW sample concentrations from TOC-22, located southeast of the site in Market Street, were the highest with 21300 ppb TPHg, 247 ppb B, 1630 ppb E and 4290 ppb X. Aug 2003 - 2 air sparge wells (AS1, AS2) installed to max depth of 85 ft bgs north and east of the dispenser island, 5 on-site dual-completion vapor wells (VW-4- VW-8) were completed to 25 ft bgs (shallow) and 45 ft bgs (deep) respectively, and one on-site GW extraction well (TOC-26) installed in anticipation of future vapor extraction testing/remediation. In addition, 4 off-site monitoring wells (TOC-24, TOC-25, TOC-27 and TOC-28) installed to further delineate GW plume. Soil sampling results from all newly installed wells showed max. hydrocarbon-impacted soil concentrations in AS1 at 40 ft bgs with 5690 ppm TPHg, 192 ppm T, 72.4 ppm E and 480 ppm X. Benzene and MTBE were at or below the detection limits for all samples. GW sampling of new wells (September 2003) with concentrations as high as 22100 ppb TPHg, 1360 ppb B, 1500 ppb T, 1000 ppb E and 3490 ppb X (TOC-24). MTBE maximum concentration of 36 ppb in TOC-26. Aug 2004 - One additional monitoring well installed on-site (TOC-30) and 2 add'l off-site wells installed (TOC-29, TOC-31). GW samples from new wells had max. concentrations of 696 ppb TPHg (TOC-30), and 16 ppb B, 37 ppb T, 20 ppb E, 99 ppb X (TOC-29). Low levels of chlorinated constituents detected in TOC-31 and thought to be

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

attributed to a dry cleaning business formerly located northwest of site, in close proximity to this well. Jan 2006 - Vapor wells VW-9 and VW-10 installed near dispenser area to accommodate remediation in this area. November 2009 – Vent line upgrades/repairs: One soil sample (VL-1-3') collected under vent line riser pipes located on west side of station building during vent line upgrades/repairs. Sample had detections of 180 ppm TPHg, 11 ppm T, 2500 ppm ethanol and other VOCs. Mar 2012 – One soil boring (ASB-1) drilled behind station building to 30 ft bgs to assess area where impacted vent line sample collected. Lab results for all soil samples were non-detect for all constituents tested. ****LPH – Free Product Nov 2009 - Feb 2014 – Free product / Liquid Phase Hydrocarbons (LPH) were first observed in 2009 in TDD1, VW-2d, and VW-3d. A total of 0.48 gallons LPH was removed by February 2010 and LPH was not observed in any of the wells again until August through December 2010. LPH was again present in November 2013 in VW-3d at a thickness of 0.02 feet. LPH was removed by periodic hand bailing. LPH was again present in VW-3d from June 2014 through August 2014 and a recovery sock was placed in the well in August 2014. As of Sept 2014, cumulative volume of LPH recovered from the site is 7.82 gallons.

****Remediation: Mar 1998 – Excavation: During UST removal/replacement activities, 1493 tons of hydrocarbon-impacted soil was excavated and transported off-site to American Remedial Technologies for recycling. Nov 2001 – SVE Pilot Testing: 32-hour SVE test conducted using VW-1s/d, VW-2 s/m/d and VW-3 s/m/d for extraction. Maximum radius of influence (ROI) calculated to be 118 ft for VW-3d but the ROI was unable to be calculated for the shallower wells. The VW-3 well cluster produced the highest concentrations (15000 ppmv TPHg) and results suggested an upgradient contaminant source was possible. A total of 952 lbs of TPHg and 0.595 lbs. MTBE were removed during test. Recent soil sampling observed hydrocarbon impacted soil near TOC-16 at similar depths to VW-3. As no previous contamination had been found in this area, Thrifty states that possibly a more recent hydrocarbon release may have occurred between July 1997 and March 1999, contamination was attributable to the former Miceli property located northeast of the site, or impacts were present, but not detected previously. Nov 2003 – AS Pilot Testing and Aquifer Testing: An air-sparge pilot test and GW pump test were conducted. Wells AS-1 and AS-2 (screened 80-85 ft bgs) were used for sparging and the ROI was calculated to be 20 to 25 feet. Well TOC-26 was used for the 24-hour aquifer test. Dec 2003 to Jun 2004 – Limited SVE and DPE Remediation: Multiple SVE and DPE events were conducted using nested wells VW-1, VW-2, VW-3, VW-6, VW-7, VW-8, and TOC-26 in varying combinations. SVE was operated a total of 15 days and DPE was operated 5 days. VW-3s/m/d was the highest producer of hydrocarbons. A total of 3485 lb vapor-phase hydrocarbons and 4420 gal GW extracted during the events. Maximum vapor concentrations were 23100 ppmv TPHg (VW-3m), 191 ppmv B (VW-3d), 0.065 ppmv MTBE (VW-5m). While the extraction test was found to be effective locally for removing the contaminant mass additional techniques such as air-sparging and GW pumping were determined to be necessary to remediate the plume and submerged soil contamination. 2007 to 2013 – SVE and DPE Remediation: March 2007 to December 2008 - SVE operations conducted using wells all of the vapor wells and TOC-26 in varying combinations. The system was shut down for over a year due to permit problems. Upon re-starting remedial operations in March 2010, dual-phase extraction (DPE) commenced utilizing a combination of SVE and GW extraction. The DPE system continued to operate until March 2012 when GW pumping was halted due to declining water table (~6 ft) conditions. SVE operations continued to operate until August 2013. Cumulatively, the DPE system removed approximately 79039 lbs of vapor-phase hydrocarbon contamination and 6947 gallons of GW. 2009 to 2012 – Periodic Free Product Recovery: In November 2009 free product was first observed in wells TDD-1, TOC-22, and VW-3D and free product recovery using periodic hand-bailing was initiated. Recovery efforts discontinued in February 2010 when free product no longer observed in any wells. In August 2010, LPH was again observed in wells TDD-1, TOC-22, and VW-3D as well as VW-2D. Periodic LPH recovery efforts resumed until December 2010, when LPH was no longer present in any wells. LPH again observed in November 2013 when 0.02 ft LPH measured in VW-3D. In June 2014 to August 2014, LPH was present in VW-3d with a max. thickness of 0.19 ft. August 2014, a hydrocarbon absorbing sock was placed in this well to recover accumulating LPH. A cumulative volume of 7.82 gallons of LPH have been recovered. ****Groundwater Monitoring: 1999 to 2014 – GW monitoring has been conducted regularly at site since 1999. Initially, depth to GW below site was approximately 57 ft bgs and has since dropped below 76 ft bgs. As of Sept 2014, depth to GW is approximately 76 ft bgs. With the drop in the water table, some of wells dry by 2009, however, sampling up to then showed an overall significant decline in dissolved hydrocarbon concentrations with relatively low to non-detect (ND) concentrations for most constituents. The exception was well VW-3D. TPHg concentrations were highest in VW-3D in early 2003 at 94800 ppb TPHg, decreased to ND in November 2005 and, during the most recent GW sampling in September 2014, were 12900 ppb. In May 2012, replacement well TOC-14R was installed near the dispenser island, northeast of the former UST cavity to replace TOC-14, which had been dry since 2009. In June 2014, samples from TOC-14R were at or below the detection limits with "J" values for many of the constituents tested, however, LPH has re-appeared in VW-3d from June through August 2014. In August 2014, an absorbent sock was installed in VW-3d for continuous absorption and removal of LPH. "J" values of tetrachloroethene (TCE) have been observed in upgradient wells TOC-24, TOC-29, TOC-30, TOC-31 and trace concentrations of ethanol in TOC-29, TDD1 and TOC-27. ****Verification: Regular GW monitoring has been conducted since 1999 and shown decline in dissolved hydrocarbon concentrations to either ND or trace concentrations. Replacement well TOC-14R has been sampled ten times since installation in 2012 and has shown a decline in TPHg (5060 ppb to 41.2 J ppb) and X (490 ppb to 2.5 J ppb). Maximum GW concentrations at the site during sampling event in September 2014 were in well VW-3D: 12900 ppb TPHg, 2.9 J ppb B, 130 ppb T, 240 ppb E, 2700 ppb X, ND MTBE, 310 ppb Naphthalene, 2000 ppb 1,2,4-TMB, and 460 ppb 1,3,5-TMB. Soil verification: May 2012 – Four progress borings (PB-1/VW-11s/d, PB-2, PB-3/VW-12, and TOC-14R) were drilled to approx. 85 ft bgs to evaluate current subsurface conditions. PB-1 was located north of the dispensers at property boundary, PB-2 was between station building and USTs, and PB-3 was near northern dispensers. TOC-14R was completed as GW monitoring well to replace well TOC-14, which had been dry since May 2009. PB-1 and PB-3 were converted to dual- and single-completion VE wells (VW-11s/d and VW-12) with short screens across impacted soil zones. Soil samples from PB-2 and TOC-14R were mostly non-detect for all constituents tested and soil samples from borings PB-1 and PB-3 showed elevated hydrocarbon impacts at 15-ft, 45-ft and 75 ft bgs. Maximum concentrations were: 3300 ppm TPHg (PB-1@45), ND B (some samples had elevated detection limits), 30 ppm T (PB-3@15), 42 ppm E (PB-1@45), 300 ppm X (PB-1@45), ND MTBE (some samples had elevated detection limits), 330 ppm 1,2,4-TMB (PB-1@15), 220 ppm 1,3,5-TMB (PB-1@45), 400 ppm Naphthalene (PB-1@45). Vapor verification: Aug 2013 – SVE Pilot Testing - Three 24-hr SVE pilot tests conducted using each of newly installed wells VW-11s/d and VW-12 for a 24-hr period. Benzene and MTBE were not detected and maximum TPHg vapor concentration detected was 120 ppmv from VW-12 at end of test. Mass removal rates during tests were 6.22 lb/day (VW-11s), 5.94 lb/day (VW-11d), and 9.71 lb/day (VW-12). Sept 2013 – SVE Rebound Test - Following a 30-day shut-down, SVE system was re-started for rebound testing on September 18, 2013 using wells VW-1s/d, VW-2s/m/d, VW-3s/m/d, VW-6s/m, VW-7s/d, VW-8s/d, VW-9, VW-10 and TOC-26. Hydrocarbon concentrations rebounded to max. concentration of 330 ppmv at 8 hours after re-start and then decreased to 230 ppmv at end of test. Similarly, mass removal rate in August, prior to system shut down, was 3.24 lbs/day. Following system restart, hydrocarbon removal rates peaked at 39.9 lbs/day after 3 days, then decreased to 31.1 lbs/day after 5 days of operation at the end of test. Feb to Mar 2014 – 30-Day SVE event – Based on vapor concentration trends and elevated mass removal rates of August 2013 pilot test and September 2013 rebound test, additional SVE rebound testing was conducted in February 2014. A 30-day (719-hr) SVE rebound test was conducted utilizing vapor wells VW-2d, VW-3 s/m/d, VW-12 and TOC-26. At start-up, VW-2d had highest vapor concentrations (300 ppmv TPHg, 2.7 ppmv B and 2.0 ppmv MTBE) and at SVE shut-down, VW-3s had highest concentrations (130 ppmv TPHg and 0.04 ppmv B). Decreasing vapor concentration trends were seen in all wells except VW-3M. Although this well showed increasing concentrations, the detected concentrations were within acceptable levels. Overall, vapor concentrations during test revealed minimal rebound with <4 lb/day removal rate and a total of 117 lbs vapor-phase petroleum hydrocarbon recovered. Sept 2014 – 14-Day SVE event – Due to the re-occurrence of LPH in VW-3d and to take advantage of the receding water table exposing additional well screen for vapor extraction, Thrifty conducted an additional SVE event using VW-3s/m/d. VW-3d had the highest initial concentrations of 3100 ppmv TPHg, 58 ppmv B and 23 ppm MTBE. Ending concentrations dropped to 850 ppmv TPHg, 24 ppmv B, and 3.0 ppmv

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

MTBE. The average mass removal rate was 68.4 lb/day with a total of 965 lb TPHg removed during the 337 hours of operation. Cumulative vapor phase hydrocarbon mass removed from the site is 75,684 lb. ****Residual Mass in Soil: Thrifty estimates the mass remaining in-situ is 5,251 lb TPHg, <1 lb B, 34 lb T, 40 lb E, 345 lb X, <1 lb MTBE, <1 lb TBA (2014 Annual Report, TOC, April 2, 2014). ****Well destruction: Oct 2016: 33 wells (24 single completion wells [AS-I, AS-2, TDD-I, TOC-II through TOC-14, TOC-I4R, TOC-I7, TOC-18, TOC-21 through TOC-31, VW-9, VW-IO and VW-12], 7 dual nested wells [VW-1 s/d, VW-4 s/m, VW-5 s/m, VW-6 s/m, VW-7 s/m, VW-8 s/m and VW-II s/m]); and 2 triple-nested wells [VW-2 s/m/d and VW-3 s/m/d] were properly destroyed and the remediation system components and compound were decommissioned and removed. Waste was transported off-site for recycling on Nov 3, 2016. ****RCDEH issued closure/NFA letter Dec 9, 2016.

Site History:						
*****Data prior to 2005 not uploaded to GeoTracker. See Riv Co Environmental Health site file*****						
****Site History/Release Information:						
July 1997 - Baseline investigation conducted. 8 soil borings (TDD1, TDD2, and TDD4 through TDD9) drilled near pump islands & USTs to 10 - 80 ft. Groundwater (GW) was encountered at 75 feet below ground surface (ft bgs) and borings TDD1 and TDD2 were completed as GW monitoring wells. Hydrocarbon-impacted soil was detected near USTs & dispensers with highest concentrations west of USTs in sample TDD2@20' (6900 ppm TPHg, 5.1 ppm benzene (B), 170 ppm toluene (T), 130 ppm ethylbenzene (E), 880 ppm xylenes (X). Highest MTBE concentration (20 ppm MTBE) was at south dispenser island in TDD7@5'. GW grab samples from TDD1 and TDD2 impacted with highest concentrations in TDD2 (37000 ppb TPHg, 600 ppb B, and <1000 ppb MTBE).						
Mar 1998 - Three 10,000-gallon gasoline USTs removed/replaced with two 20,000-gallon gasoline USTs. During UST replacements, 21 soil samples collected below USTs and product lines. Max. concentrations detected in T4 from western end of UST cavity (23000 ppm TPHg, 140 ppm B, 610 ppm E, 390 ppm MTBE) and in P5 at east end of southernmost dispenser island (4200 ppm TPHg, 5.5 ppm B, 19 ppm E, and 25 ppm MTBE). Approx 1493 tons hydrocarbon-impacted soil excavated during UST removal activities. Site placed into LOP on May 27, 1998.						
****Assessment:						
Feb/Mar 1999 - Further soil and GW assessment conducted to define extent of hydrocarbon impacts at the site. 6 soil borings (TOC-11 through TOC-16) drilled near dispensers, UST area and at periphery of site. TOC-11 to TOC-14 completed as GW monitoring wells. Highest soil impacts detected north of UST cavity (TOC-15) and north of northernmost dispenser island (TOC-16) with max. concentrations of: 4900 ppm TPHg (TOC-16@15'), 43 ppm B (TOC-16@50') and 7 ppm MTBE (TOC-15@20'). GW from all new monitoring wells impacted with maximum concentrations along eastern and southern property boundaries: 11000 ppb TPHg (TOC-14), 2500 ppb B (TOC-12), 310 ppb T (TOC-12), 330 ppb E (TOC-12), 710 ppb X (TOC-12), and 590 ppb MTBE (TOC-12).						
June 2000 - Two soil borings were drilled to 78 ft bgs on-site north and east of the dispensers (TOC-19, TOC-20) and two off-site gw monitoring wells (TOC-17, TOC-18) were installed in 14th Street west and south of the site. Maximum soil concentrations were detected below the water table: 3000 ppm TPHg (TOC-18@70'), 0.09 ppm B (TOC-20@70'), 2.83 ppm E (TOC-20@70'), and ND <0.01 MTBE. Highest GW concentrations were detected in TOC-18 with concentrations of: 11,600 ppb TPHg 629 ppb E and ND < 500 ppb MTBE.						
Based on the data, it appeared that the hydrocarbon source areas were in the northern portion of the UST area and several areas within the dispenser islands. Potential sources of the releases were stopped with the replacement of the UST systems in 1998.						
Oct 2001 - Eight on-site dual- and triple-nested vapor extraction (VE) wells were installed (VW-1s/d, VW-2 s/m/d and VW-3 s/m/d) and three off-site monitoring wells (TOC-21 to TOC-23) were installed south, southeast and west of the site. Maximum soil concentrations detected were: 25000 ppm TPHg (VW-3@15') 7.31 ppm benzene (VW-3@65.5') and 2.78 ppm MTBE (VW-2@26.5'). GW sample concentrations from TOC-22, located southeast of the site in Market Street, were the highest with 21300 ppb TPHg, 247 ppb B, 1630 ppb E and 4290 ppb X.						
Aug 2003 - 2 air sparge wells (AS1, AS2) installed to max depth of 85 ft bgs north and east of the dispenser island, 5 on-site dual-completion vapor wells (VW-4- VW-8) were completed to 25 ft bgs (shallow) and 45 ft bgs (deep) respectively, and one on-site GW extraction well (TOC-26) installed in anticipation of future vapor extraction testing/remediation. In addition, 4 off-site monitoring wells (TOC-24, TOC-25, TOC-27 and TOC-28) installed to further delineate GW plume. Soil sampling results from all newly installed wells showed max. hydrocarbon-impacted soil concentrations in AS1 at 40 ft bgs with 5690 ppm TPHg, 192 ppm T, 72.4 ppm E and 480 ppm X. Benzene and MTBE were at or below the detection limits for all samples. GW sampling of new wells (September 2003) with concentrations as high as 22100 ppb TPHg, 1360 ppb B, 1500 ppb T, 1000 ppb E and 3490 ppb X (TOC-24). MTBE maximum concentration of 36 ppb in TOC-26.						
Aug 2004 - One additional monitoring well installed on-site (TOC-30) and 2 add'l off-site wells installed (TOC-29, TOC-31). GW samples from new wells had max. concentrations of 696 ppb TPHg (TOC-30), and 16 ppb B, 37 ppb T, 20 ppb E, 99 ppb X (TOC-29). Low levels of chlorinated constituents detected in TOC-31 and thought to be attributed to a dry cleaning business formerly located northwest of site, in close proximity to this well.						
Jan 2006 - Vapor wells VW-9 and VW-10 installed near dispenser area to accommodate remediation in this area.						
November 2009 - Vent line upgrades/repairs: One soil sample (VL-1-3') collected under vent line riser pipes located on west side of station building during vent line upgrades/repairs. Sample had detections of 180 ppm TPHg, 11 ppm T, 2500 ppm ethanol and other VOCs.						
Mar 2012 - One soil boring (ASB-1) drilled behind station building to 30 ft bgs to assess area where impacted vent line sample collected. Lab results for all soil samples were non-detect for all constituents tested.						
****LPH - Free Product						
Nov 2009 - Feb 2014 - Free product / Liquid Phase Hydrocarbons (LPH) were first observed in 2009 in TDD1, VW-2d, and VW-3d. A total of 0.48 gallons LPH was removed by February 2010 and LPH was not observed in any of the wells again until August through December 2010. LPH was again						

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

present in November 2013 in VW-3d at a thickness of 0.02 feet. LPH was removed by periodic hand bailing. LPH was again present in VW-3d from June 2014 through August 2014 and a recovery sock was placed in the well in August 2014. As of Sept 2014, cumulative volume of LPH recovered from the site is 7.82 gallons.

****Remediation:

Mar 1998 – Excavation: During UST removal/replacement activities, 1493 tons of hydrocarbon-impacted soil was excavated and transported off-site to American Remedial Technologies for recycling.

Nov 2001 – SVE Pilot Testing: 32-hour SVE test conducted using VW-1s/d, VW-2 s/m/d and VW-3 s/m/d for extraction. Maximum radius of influence (ROI) calculated to be 118 ft for VW-3d but the ROI was unable to be calculated for the shallower wells. The VW-3 well cluster produced the highest concentrations (15000 ppmv TPHg) and results suggested an upgradient contaminant source was possible. A total of 952 lbs of TPHg and 0.595 lbs. MTBE were removed during test. Recent soil sampling observed hydrocarbon impacted soil near TOC-16 at similar depths to VW-3. As no previous contamination had been found in this area, Thrifty states that possibly a more recent hydrocarbon release may have occurred between July 1997 and March 1999, contamination was attributable to the former Miceli property located northeast of the site, or impacts were present, but not detected previously.

Nov 2003 – AS Pilot Testing and Aquifer Testing: An air-sparge pilot test and GW pump test were conducted. Wells AS-1 and AS-2 (screened 80-85 ft bgs) were used for sparging and the ROI was calculated to be 20 to 25 feet. Well TOC-26 was used for the 24-hour aquifer test.

Dec 2003 to Jun 2004 – Limited SVE and DPE Remediation: Multiple SVE and DPE events were conducted using nested wells VW-1, VW-2, VW-3, VW-6, VW-7, VW-8, and TOC-26 in varying combinations. SVE was operated a total of 15 days and DPE was operated 5 days. VW-3s/m/d was the highest producer of hydrocarbons. A total of 3485 lb vapor-phase hydrocarbons and 4420 gal GW extracted during the events. Maximum vapor concentrations were 23100 ppmv TPHg (VW-3m), 191 ppmv B (VW-3d), 0.065 ppmv MTBE (VW-5m). While the extraction test was found to be effective locally for removing the contaminant mass additional techniques such as air-sparging and GW pumping were determined to be necessary to remediate the plume and submerged soil contamination.

2007 to 2013 – SVE and DPE Remediation: March 2007 to December 2008 - SVE operations conducted using wells all of the vapor wells and TOC-26 in varying combinations. The system was shut down for over a year due to permit problems. Upon re-starting remedial operations in March 2010, dual-phase extraction (DPE) commenced utilizing a combination of SVE and GW extraction. The DPE system continued to operate until March 2012 when GW pumping was halted due to declining water table (~6 ft) conditions. SVE operations continued to operate until August 2013. Cumulatively, the DPE system removed approximately 79039 lbs of vapor-phase hydrocarbon contamination and 6947 gallons of GW.

2009 to 2012 – Periodic Free Product Recovery: In November 2009 free product was first observed in wells TDD-1, TOC-22, and VW-3D and free product recovery using periodic hand-bailing was initiated. Recovery efforts discontinued in February 2010 when free product no longer observed in any wells. In August 2010, LPH was again observed in wells TDD-1, TOC-22, and VW-3D as well as VW-2D. Periodic LPH recovery efforts resumed until December 2010, when LPH was no longer present in any wells. LPH again observed in November 2013 when 0.02 ft LPH measured in VW-3D. In June 2014 to August 2014, LPH was present in VW-3d with a max. thickness of 0.19 ft. August 2014, a hydrocarbon absorbing sock was placed in this well to recover accumulating LPH. A cumulative volume of 7.82 gallons of LPH have been recovered.

****Groundwater Monitoring:

1999 to 2014 – GW monitoring has been conducted regularly at site since 1999. Initially, depth to GW below site was approximately 57 ft bgs and has since dropped below 76 ft bgs. As of Sept 2014, depth to GW is approximately 76 ft bgs. With the drop in the water table, some of wells dry by 2009, however, sampling up to then showed an overall significant decline in dissolved hydrocarbon concentrations with relatively low to non-detect (ND) concentrations for most constituents. The exception was well VW-3D. TPHg concentrations were highest in VW-3D in early 2003 at 94800 ppb TPHg, decreased to ND in November 2005 and, during the most recent GW sampling in September 2014, were 12900 ppb. In May 2012, replacement well TOC-14R was installed near the dispenser island, northeast of the former UST cavity to replace TOC-14, which had been dry since 2009. In June 2014, samples from TOC-14R were at or below the detection limits with "J" values for many of the constituents tested, however, LPH has re-appeared in VW-3d from June through August 2014. In August 2014, an absorbent sock was installed in VW-3d for continuous absorption and removal of LPH. "J" values of tetrachloroethene (TCE) have been observed in upgradient wells TOC-24, TOC-29, TOC-30, TOC-31 and trace concentrations of ethanol in TOC-29, TDD1 and TOC-27.

****Verification:

GW verification: Regular GW monitoring has been conducted since 1999 and shown decline in dissolved hydrocarbon concentrations to either ND or trace concentrations. Replacement well TOC-14R has been sampled ten times since installation in 2012 and has shown a decline in TPHg (5060 ppb to 41.2 J ppb) and X (490 ppb to 2.5 J ppb). Maximum GW concentrations at the site during sampling event in September 2014 were in well VW-3D: 12900 ppb TPHg, 2.9 J ppb B, 130 ppb T, 240 ppb E, 2700 ppb X, ND MTBE, 310 ppb Naphthalene, 2000 ppb 1,2,4-TMB, and 460 ppb 1,3,5-TMB.

Soil verification: May 2012 – Four progress borings (PB-1/VW-11s/d, PB-2, PB-3/VW-12, and TOC-14R) were drilled to approx. 85 ft bgs to evaluate current subsurface conditions. PB-1 was located north of the dispensers at property boundary, PB-2 was between station building and USTs, and PB-3 was near northern dispensers. TOC-14R was completed as GW monitoring well to replace well TOC-14, which had been dry since May 2009. PB-1 and PB-3 were converted to dual- and single-completion VE wells (VW-11s/d and VW-12) with short screens across impacted soil zones. Soil samples from PB-2 and TOC-14R were mostly non-detect for all constituents tested and soil samples from borings PB-1 and PB-3 showed elevated hydrocarbon impacts at 15-ft, 45-ft and 75 ft bgs. Maximum concentrations were: 3300 ppm TPHg (PB-1@45), ND B (some samples had elevated detection limits), 30 ppm T (PB-3@15), 42 ppm E (PB-1@45), 300 ppm X (PB-1@45), ND MTBE (some samples had elevated detection limits), 330 ppm 1,2,4-TMB (PB-1@15), 220 ppm 1,3,5-TMB (PB-1@45), 400 ppm Naphthalene (PB-1@45).

Vapor verification: Aug 2013 – SVE Pilot Testing - Three 24-hr SVE pilot tests conducted using each of newly installed wells VW-11s/d and VW-12 for a 24-hr period. Benzene and MTBE were not detected and maximum TPHg vapor concentration detected was 120 ppmv from VW-12 at end of test. Mass removal rates during tests were 6.22 lb/day (VW-11s), 5.94 lb/day (VW-11d), and 9.71 lb/day (VW-12).

Sept 2013 – SVE Rebound Test - Following a 30-day shut-down, SVE system was re-started for rebound testing on September 18, 2013 using wells VW-1s/d, VW-2s/m/d, VW-3s/m/d, VW-6s/m, VW-7s/d, VW-8s/d, VW-9, VW-10 and TOC-26. Hydrocarbon concentrations rebounded to max. concentration of 330 ppmv at 8 hours after re-start and then decreased to 230 ppmv at end of test. Similarly, mass removal rate in August, prior to system shut down, was 3.24 lbs/day. Following system restart, hydrocarbon removal rates peaked at 39.9 lbs/day after 3 days, then decreased to 31.1 lbs/day after 5 days of operation at the end of test.

Feb to Mar 2014 – 30-Day SVE event – Based on vapor concentration trends and elevated mass removal rates of August 2013 pilot test and September 2013 rebound test, additional SVE rebound testing was conducted in February 2014. A 30-day (719-hr) SVE rebound test was conducted utilizing vapor wells VW-2d, VW-3 s/m/d, VW-12 and TOC-26. At start-up, VW-2d had highest vapor concentrations (300 ppmv TPHg, 2.7 ppmv B and 2.0 ppmv MTBE) and at SVE shut-down, VW-3s had highest concentrations (130 ppmv TPHg and 0.04 ppmv B). Decreasing vapor concentration trends were seen in all wells except VW-3M. Although this well showed increasing concentrations, the detected concentrations were within acceptable levels.

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Overall, vapor concentrations during test revealed minimal rebound with <4 lb/day removal rate and a total of 117 lbs vapor-phase petroleum hydrocarbon recovered.

Sept 2014 – 14-Day SVE event – Due to the re-occurrence of LPH in VW-3d and to take advantage of the receding water table exposing additional well screen for vapor extraction, Thrifty conducted an additional SVE event using VW-3s/m/d. VW-3d had the highest initial concentrations of 3100 ppmv TPHg, 58 ppmv B and 23 ppm MTBE. Ending concentrations dropped to 850 ppmV TPHg, 24 ppmv B, and 3.0 ppmv MTBE. The average mass removal rate was 68.4 lb/day with a total of 965 lb TPHg removed during the 337 hours of operation. Cumulative vapor phase hydrocarbon mass removed from the site is 75,684 lb.

****Residual Mass in Soil: Thrifty estimates the mass remaining in-situ is 5,251 lb TPHg, <1 lb B, 34 lb T, 40 lb E, 345 lb X, <1 lb MTBE, <1 lb TBA (2014 Annual Report, TOC, April 2, 2014).

****Well destruction: Oct 2016: 33 wells (24 single completion wells [AS-I, AS-2, TDD-I, TOC-II through TOC-14, TOC-I4R, TOC-I7, TOC-18, TOC-21 through TOC-31, VW-9, VW-IO and VW-12], 7 dual nested wells [VW-1 s/d, VW-4 s/m, VW-5 s/m, VW-6 s/m, VW-7 s/m, VW-8 s/m and VW-II s/m]); and 2 triple-nested wells [VW-2 s/m/d and VW-3 s/m/d] were properly destroyed and the remediation system components and compound were decommissioned and removed. Waste was transported off-site for recycling on Nov 3, 2016.

****RCDEH issued closure/NFA letter Dec 9, 2016.

Violations

Violation Date:	03/04/2020	Violation Source:	CERS
Violation Program:	UST	Violation Division:	Riverside County Department of Env Health
Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)		
Violation Notes:			

Returned to compliance on 03/19/2020.

Violation Description:

Failure to comply with one or more of the following overfill prevention equipment requirements:
 Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
 Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
 Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
 Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018.

For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter.

For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter.

Inspected within 30 days after a repair to the overfill prevention equipment.

Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer.

Inspected by a certified UST service technician.

Maintain records of overfill prevention equipment inspection for 36 months.

Facility Type:

Composting Method:

Gndwater Monitoring Freque: # OF WELLS MONITORED - QUARTERLY : 11

REASONS FOR QUARTERLY OR MONTHLY OR OTHER GROUNDWATER MONITORING:

Assessment Incomplete - add'l lateral soil/GW assessment req'd

WDR Permit Requirement - pending ISCO as GW remedy

Well Being Sampled During Remedial Action for Progress Assessment - VES/AS pending AQMD moratorium & per-ozone sparging proposed

Well Being Sampled For Free Product Evaluation and Reduction Verification - Historical LPH in MW-1, MW-3 & MW-6

Well Has Not Shown Reliable Consistency Yet To Warrant Reduction in Sampling Frequency - LPH/GW concs. fluctuate significantly qtr to qtr.

Designated Beneficial Use

Desc:

Site History:

Municipal and Domestic Supply, Agricultural Supply, Industrial Service Supply, Industrial Process Supply

RB(VJB/KRW)met w/RP (City) representatives & env. consultant (URS - Paul Peterson) to discuss results from "fall-off" VES test completed on new vapor points (e.g SB-1/SVE-1 & SB-4/SVE-2) installed during CSB. URS has recommended site closure, but RB has concerns about the significant mass that was readily recovered - estimated mass of 8,700 POUNDS in just 3-4 months - begs the question of what really remains in close proximity of underlying GW (within ~15') - memo.

Action Type: Response Requested - Other
Action: Request for Closure - Regulator Responded
Action Date: 6/30/2014
Received Issue Date: 11/4/2014

Project Update - Spoke w/City (Kaitlyn) - City council approved the short-term VES test. URS will forward workplan proposal for RB review/approval

Action Type: Other Regulatory Actions
Action: Meeting
Action Date: 10/29/2013
Received Issue Date: 10/29/2013
Doc Link:
Title Description Comments:

RB met w/City personnel & consultant (URS) to discuss agency concerns w/recent findings - City has limited funding mechanisms for completing add'l testing. SVS results suggest no significant (VI) threat at surface, though CU may be necessary for unrestricted use/redevelopment. The City currently has no interested buyers. RB/stakeholders discussed very elevated residual PHCs encountered proximate GW during CSB - developed conceptual scope for short-term vapor testing (8-24hr) on newly-installed vapor points (SB-1/SB-4) to evaluate recoverable mass/loading and associated threat to underlying GW resource. One add'l round of post-remedy GWS was previously req'd for closure, but City may not have adequate funding. KRW/VJB discussed using 2013-2014 lab contract to collect post-remediation GWS data needed to evaluate contaminant "rebound" & quantify current GW

Title Description Comments:

Spoke w/City re: recent discovery of LPH in newly-installed wells. RB expressed concern that proposed GH2O remedy (air-sparging) was not aggressive enough. Installation of a free product skimmer/recovery system is required and VES installation should be expedited., but AS may not be considered adequate at this time. If data from the new GH2O wells shows that significant migration has occurred, then GH2O extraction may be required for hydraulic control.

Title Description Comments:						
Spoke w/ Bill (URS). Field personnel encountered free product in several of the newly-installed wells (MW-6; 3'LPH)& existing (MW-1; 1'LPH) /replacement (MW-3R; 1'LPH) wells. GH2O has dropped more than 7 feet since last sampling event (Jan 05). RB cannot approve AS, if LPH is present. Bill plans to purge several wells to help quantify LPH, but he believes that LPH can be reduced/removed through skimmer/recovery, in order to facilitate AS later. RB is concerned that AS may not be aggressive enough, but will evalaute RAP findings and make a final determination.

Spoke w/RP rep. from City (Kaitlyn Nguyen) - add'l historical info. needed for UST removal/disposal and LPH removal program (manifest docs)- also discussed GEIMS uploads - particularly EDF lab data - incomplete records &/or accessibility for data compilation has delayed closure processing & public noticing. Per RP request, VJB sent follow-up email to memorialize add'l actions needed by RP & consultant (AECOM). Kaitlyn was not aware that AECOM had not uploaded all available site data, but she will see that matter is addressed ASAP. She will also try to track down disposal records/documentation.

Title Description Comments:						
VJB/KRW discussed case w/SB personnel - Pat Cullen, Bob Trommer & Lola Barba of Orphan Site Fund Mgr - RB very concerned about substantial mass (8,700#) that was removed during "fall-off" test" that was intended to prove PHCs were tied up/not recoverable/not mobile leach source - instead showed substantial recoverable mass was still present and extractable - represents significant threat to GW immediately below. City already prepared to conduct 2-week VES event to follow up on high residual PHCs encountered in CSBs. Field work delayed briefly due to AQMD permit issue, but anticipated to be resolved quickly. As such, SB & RB staff agreed to reconvene to discuss findings in ~ 2 months - early Oct.. According to SB Fund staff accounting, site has not exhausted total allowable OSCA/grant \$\$\$ - as was believed. SB will verify expenditures and inform RB RE: whether add'l monies are potentially available to City. Per SB OSCF personnel, the City site rec'd \$1,395,715. Although old program has been terminated/replaced - City could still be eligible to receive ~\$100K before reaching their \$1.5M cap. As such, OSCF recommended RP (City) re-apply by submitting an application under new OSCF. VJB to notify City of opportunity.

Action Type: Other Regulatory Actions Action: Technical Correspondence / Assistance / Other Action Date: 4/15/2015 Received Issue Date: 4/15/2015 Doc Link: Title Description Comments: VJB contacted Brent & Paul (AECOM) - discussed VES Test WP scope - proposes VE-5/6 be utilized for testing. RB assumes VE-5/6 "B" zone wells (this was not explicitly stated). Per mtg./discussion other existing wells (e.g. AS wells and MW-3R/6) would also to be evaluated for testing (WP did not explicitly state that this was done). Paul said the nearby AS wells (70-75') and MW's (60-80') were gauged - contained GW - thus, they felt not to be useful for extraction. RB also noted that WP proposal states VE-8(B) was eliminated as a potential extraction point (despite history of high vapor concs.) due to "low flow rates" - VJB unable to locate well performance data to confirm/verify - Paul said flow rates for individual wells were "field notes" only - never tabulated, he recalls that VE-8(B) exhibited substantially lower (single digit) cfm, as compared to most others (e.g SVE-1/2, VE-5/6B, etc) which averaged around 30-50 cfm. Based on phone conversation, it would appear that test scope was fully evalaute/considered to develop proposal, as req'd by RB directives.

Title Description Comments:		Soil Vapor Extraction Fall-off Test Report - FOT results showed moderate PHCs, which declined during 2-week event, suggests that significant extractable hydrocarbon mass has been depleted, residual PHCs are tied up in finer-grained lithology. RB noted that mass removal for recent effort was not cited - sent email to AECOM requesting add'l info. needed for case record and closure support. Upon review of case fi/e/supplemental information, staff determined EFC. and issued email notification to RP.

Doc Link:

Title Description Comments:

RB requested project update. RB Driveby - system installation is not complete, startup was supposedly schedule for Dec. 1st. RB also inquired about analytical data and system as-built spec.

Action Type: Enforcement/Orders

Action: Verbal Enforcement

Action Date: 11/17/2008

Received Issue Date: 11/17/2008

Doc Link:

Title Description Comments:

RB requested project update.

Action Type: Response Requested - Other

Action: Verbal Communication

Action Date: 11/17/2008

Received Issue Date: 11/17/2008

Doc Link:

Title Description Comments:

Verbal Communication - URS update - VES/AS points have been installed. Procurement of the system and permits has delayed the process by a few weeks. URS hope to initiate corrective action by Dec. 1st.

Action Type: Other Regulatory Actions

Action: Site Visit / Inspection / Sampling

Action Date: 11/12/2008

Received Issue Date: 11/12/2008

Doc Link:

Title Description Comments:

RB site visit - A/G components - system manifold/unit have not been installed - compound has not even been erected. What happened to mid-Oct-2008 start-up?

Action Type: Response Requested - Reports

Action: Remedial Progress Report

Action Date: 10/30/2008

Received Issue Date: 12/5/2008

Cleanup Sites from GeoTracker Cleanup Sites Data Download - Facilities Detail

RB Case No: 083300555T
Local Case No: 90009
Begin Date: 12/19/1989
Lead Agency: SANTA ANA RWQCB (REGION 8)
Local Agency: RIVERSIDE COUNTY LOP
CUF Case: YES
CalEnvScreen Score:
EPA Region: 9
Qty Rlsd Gallons:
Potential COC: * Solvents, Other Solvent or Non-Petroleum Hydrocarbon
How Discovered: Tank Closure
Stop Method:
Stop Description:
Case Worker: CFM
Military DoD Site: No
Leak Reported Dt: 1990-01-10 00:00:00
No Further Action Dt: 2011-06-14 00:00:00
Potential Media of Concern: Aquifer used for drinking water supply
How Discovered Description:
Calwater Watershed Name: Santa Ana River - Middle Santa Ana River - Riverside (801.27)
DWR GW Subbasin Name: Upper Santa Ana Valley - Riverside-Arlington (8-002.03)
Disadvantaged Community:
Coordinate Source: * Historical Geocode - Exact Address Match
Discharge Cause: Corrosion
Discharge Source: Tank
Facility Project Sub Type:
Calenviroscreen 3 Score: 96-100% (highest scores)
Calenviroscreen 4 Score: 95-100% (highest scores)

Sites from GeoTracker Search - Cleanup Action Report (as of Oct 17, 2022)

Action Type:	SOIL VAPOR EXTRACTION (SVE)
Begin Date:	6/8/2000
End Date:	1/20/2003

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
Phase:		Other (See Description), Other (See Description)				
Contaminant Mass Removed:		80 Pounds				
Description:		PCE estimated from assuming 90 cfm and 5336 hrs operation. Assumed remainder of recovered liquids to be misc petroleum hydrocarbons.				
Action Type:		SOIL VAPOR EXTRACTION (SVE)				
Begin Date:		7/2/2010				
End Date:		12/20/2010				
Phase:		Other (See Description), Water				
Contaminant Mass Removed:		13 Pounds				
Description:		2400 gallons of liquid condensate collected during SVE operations. Probably a combination of water and other petroleum hydrocarbons.

Title Description Comments:		Telephone Call I talked to Kaitlyn Nguyen of the Riverside Redevelopment Agency (826-2430) and Matthew Hart of Lor Geotechnical (653-1760), their consultant. They are awaiting approval from EPA regarding their Sample Analysis Plan and tring to finalize right of entry. They anticiapte work to be completed within the next few months. The PERC site is one of four lots for the planned redevelopment. The scope of work for the PERC site is two soil vapor probes in the upper parking area and two behind the building in the lower parking area.

Action:		Meeting				
Action Date:		2/14/2011				
Received Issue Date:		2/14/2011				
Doc Link:						
Title Description Comments:		Meeting with SEIU regarding closure of PERC site Kendall/Adams recalculated vapor recovery and estimated about 1 gallon PCE recovered instead of the reported 200 gallons. Given the lower volume recovered, Board staff more inclined to grant closure. Staff requested revised SVE recovery report and contacts for adjacent property owners for 30-day closure notice.

Site History:	

An unauthorized release of gasoline occurred at the site. The release was discovered on June 14, 1990 in response to complaints of nuisance conditions created from a piping leak. Product was observed seeping out of cracks in the concrete surface. The piping leak was caused by corrosion of the piping section near the eastern dispenser island. Samples collected from the excavation repair trench on June 15, 1990 indicated 180,000 milligrams per kilogram (mg/kg) of total petroleum hydrocarbons as gasoline (TPH-g) in soil at 6 feet. This represents the worst case conditions at the site prior to remediation as shown on the table in Section III above. However, the samples were not analyzed for volatile organics. The piping leak was repaired with excavated soil returned as backfill. From August 14 to 24, 1990, a preliminary assessment was performed consisting of four vertical borings around the dispensers and one slant boring beneath the eastern dispenser piping (ESE, October 5, 1990). The highest concentrations of the detected aromatic volatile organic compounds: benzene, toluene, ethylbenzene and xylenes (BTEX) are shown on the table in Section III above. Although these were the highest concentrations of BTEX detected, they may not represent the worst case conditions prior to remediation. For example, benzene was 240 mg/kg and the sample contained 8,000 mg/kg of TPH-g. The samples were not analyzed for the full suite of volatile organic compounds. In January and May 1992, corrective action plans were submitted. From January to November 1992, A Phase II Environmental Assessment was conducted that consisted of installing four vapor extraction wells, two vapor monitoring well clusters, three groundwater monitoring wells and several cone penetrometer borings, conducting a vapor extraction test and performing multiple phases of soil vapor sampling (ESE, January 18, 1993). The highest concentration of benzene detected was 1,200 micrograms per liter (Ijg/l) in the groundwater sample collected from MW2 on November 28, 1992. The compound, 1,1,1-trichloroethane, was detected at its highest concentration represented on the table. In April 1993, one groundwater monitoring well and four vapor wells were installed (ESE, October 15, 1993). The wells were designed to meet additional assessment requirements and provide support to the existing vapor

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

extraction system. Groundwater monitoring was conducted from November 1992 until May 2000. The groundwater beneath the site has ranged from a depth of approximately 60 to 77 feet below surface. Low levels (less than 50 micrograms per liter [IJg/l]) of chlorinated hydrocarbons have been detected in the groundwater historically at this site. The highest concentrations of TPH-g and benzene reported were 19,000 and 4,000 IJg/1 in December 1993. According to the groundwater monitoring report, dated May 30, 2000, TPH-g (410 IJg/l) and benzene (0.96 IJg/l) were detected in one well. No other fuel constituents were detected in groundwater in May of 2000. MtBE and the other fuel oxygenates have never been detected in groundwater. Post remedial groundwater monitoring was conducted on May 6, 2008. TPH-g and BTEX were not detected. Low levels of chlorinated compounds were detected at concentrations less than 5 IJg/1. Vapor extraction was conducted intermittently from September 1992 until May 10, 1999 (total operation period of 5 years and 4 months). This vapor extraction effort removed 3,336 pounds of hydrocarbon Riverside County Garage - 5 - July 1, 2010 vapors from the subsurface. During vapor extraction efforts, the highest concentration of benzene reported was 760 ppmv in August 1993 and the highest TPH-g was 15,000 ppmv in January 1994. During a 3-day vapor extraction test conducted in August 2000, neither benzene nor MTBE were detected in the vapor samples collected from the four vapor wells throughout the test. The highest concentration of TPH-g was 1,638 parts per million by volume ppmv. Since 1997, the highest concentration of benzene in the vapor was 8.8 ppmv in April 1998. The only reported MtBE in vapor was 2.4 ppmv on June 10, 1997. From June 21 to 22, 2008 a vapor extraction rebound test was conducted using a new well, SVE-1 installed on June 20, 2008 to facilitate testing in the area found to contain residual concentrations of petroleum hydrocarbons in the dispenser area during post remediation soil verification sampling. Benzene and MtBE were not detected in the vapor samples collected during the test. The highest concentration of TPH-g was 1,600 ppmv. In August 1999, the tanks and piping were removed or upgraded. A limited amount of soil was removed and transported offsite as non-hazardous waste. During the tank removal and upgrade, sampling indicated generally decreased concentrations of petroleum hydrocarbons. Methyl tertiary butyl ether (MtBE) was reported for six soil samples using EPA Method 8021 B; however, it was not confirmed using EPA Method 8260. The highest concentration reported was 12 mg/kg in a soil sample collected from beneath the eastern dispenser piping as shown on the table in Section III above. The results of post remedial soil verification sampling in May 2008 are presented on the after column in the table in Section III above. The petroleum hydrocarbon concentrations have significantly reduced and the worst case results are limited beneath the canopy of the existing fuel dispensing area. Based on the results of the assessment and remediation activities conducted to date:

- The source of gasoline in soil was identified and repaired or replaced;
- The site is currently an active fueling facility;
- The active underground storage tank and fuel dispensing systems were upgraded in 1999;
- The soil and groundwater contaminant plumes have been defined;
- MtBE was detected in a limited number of soil, vapor and groundwater samples collected at the site;
- Soil vapor extraction removed more than 3,000 pounds of petroleum hydrocarbons from the subsurface;
- Soil, vapor and groundwater verification sampling indicated significant decreases in residual petroleum hydrocarbon concentrations; and
- Petroleum hydrocarbon concentrations in groundwater confirmation samples were within acceptable limits for closure. Therefore, no further action is recommended at this site.

Site History:						

An unauthorized release of gasoline occurred at the site. The release was discovered on June 14, 1990 in response to complaints of nuisance conditions created from a piping leak. Product was observed seeping out of cracks in the concrete surface. The piping leak was caused by corrosion of the piping section near the eastern dispenser island. Samples collected from the excavation repair trench on June 15, 1990 indicated 180,000 milligrams per kilogram (mg/kg) of total petroleum hydrocarbons as gasoline (TPH-g) in soil at 6 feet. This represents the worst case conditions at the site prior to remediation as shown on the table in Section III above. However, the samples were not analyzed for volatile organics. The piping leak was repaired with excavated soil returned as backfill.

From August 14 to 24, 1990, a preliminary assessment was performed consisting of four vertical borings around the dispensers and one slant boring beneath the eastern dispenser piping (ESE, October 5, 1990). The highest concentrations of the detected aromatic volatile organic compounds: benzene, toluene, ethylbenzene and xylenes (BTEX) are shown on the table in Section III above. Although these were the highest concentrations of BTEX detected, they may not represent the worst case conditions prior to remediation. For example, benzene was 240 mg/kg and the sample contained 8,000 mg/kg of TPH-g. The samples were not analyzed for the full suite of volatile organic compounds.

In January and May 1992, corrective action plans were submitted. From January to November 1992, A Phase II Environmental Assessment was conducted that consisted of installing four vapor extraction wells, two vapor monitoring well clusters, three groundwater monitoring wells and several cone penetrometer borings, conducting a vapor extraction test and performing multiple phases of soil vapor sampling (ESE, January 18, 1993). The highest concentration of benzene detected was 1,200 micrograms per liter (IJg/l) in the groundwater sample collected from MW2 on November 28, 1992. The compound, 1,1,1-trichloroethane, was detected at its highest concentration represented on the table.

In April 1993, one groundwater monitoring well and four vapor wells were installed (ESE, October 15, 1993). The wells were designed to meet additional assessment requirements and provide support to the existing vapor extraction system. Groundwater monitoring was conducted from November 1992 until May 2000. The groundwater beneath the site has ranged from a depth of approximately 60 to 77 feet below surface. Low levels (less than 50 micrograms per liter [IJg/l]) of chlorinated hydrocarbons have been detected in the groundwater historically at this site. The highest concentrations of TPH-g and benzene reported were 19,000 and 4,000 IJg/l in December 1993. According to the groundwater monitoring report, dated May 30, 2000, TPH-g (410 IJg/l) and benzene (0.96 IJg/l) were detected in one well. No other fuel constituents were detected in groundwater in May of 2000. MtBE and the other fuel oxygenates have never been detected in groundwater. Post remedial groundwater monitoring was conducted on May 6, 2008. TPH-g and BTEX were not detected. Low levels of chlorinated compounds were detected at concentrations less than 5 IJg/l.

Vapor extraction was conducted intermittently from September 1992 until May 10, 1999 (total operation period of 5 years and 4 months). This vapor extraction effort removed 3,336 pounds of hydrocarbon Riverside County Garage - 5 - July 1, 2010 vapors from the subsurface. During vapor extraction efforts, the highest concentration of benzene reported was 760 ppmv in August 1993 and the highest TPH-g was 15,000 ppmv in January 1994. During a 3-day vapor extraction test conducted in August 2000, neither benzene nor MTBE were detected in the vapor samples collected from the four vapor wells throughout the test. The highest concentration of TPH-g was 1,638 parts per million by volume ppmv. Since 1997, the highest concentration of benzene in the vapor was 8.8 ppmv in April 1998. The only reported MtBE in vapor was 2.4 ppmv on June 10, 1997. From June 21 to 22, 2008 a vapor extraction rebound test was conducted using a new well, SVE-1 installed on June 20, 2008 to facilitate testing in the area found to contain residual concentrations of petroleum hydrocarbons in the dispenser area during post remediation soil verification sampling. Benzene and MtBE were not detected in the vapor samples collected during the test. The highest concentration of TPH-g was 1,600 ppmv.

In August 1999, the tanks and piping were removed or upgraded. A limited amount of soil was removed and transported offsite as non-hazardous waste. During the tank removal and upgrade, sampling indicated generally decreased concentrations of petroleum hydrocarbons. Methyl tertiary butyl ether (MtBE) was reported for six soil samples using EPA Method 8021 B; however, it was not confirmed using EPA Method 8260. The highest concentration reported was 12 mg/kg in a soil sample collected from beneath the eastern dispenser piping as shown on the table in Section III above. The results of post remedial soil verification sampling in May 2008 are presented on the after column in the table in Section III above. The petroleum hydrocarbon concentrations have significantly reduced and the worst case results are limited beneath the canopy of the existing fuel dispensing area.

Based on the results of the assessment and remediation activities conducted to date:

- The source of gasoline in soil was identified and repaired or replaced;
-

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

The site is currently an active fueling facility;

-

The active underground storage tank and fuel dispensing systems were upgraded in 1999;

-

The soil and groundwater contaminant plumes have been defined;

-

MtBE was detected in a limited number of soil, vapor and groundwater samples collected at the site;

-

Soil vapor extraction removed more than 3,000 pounds of petroleum hydrocarbons from the subsurface;

-

Soil, vapor and groundwater verification sampling indicated significant decreases in residual petroleum hydrocarbon concentrations; and

-

Petroleum hydrocarbon concentrations in groundwater confirmation samples were within acceptable limits for closure. Therefore, no further action is recommended at this site.

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS)
TPH-DIESEL
TETRACHLOROETHYLENE (PCE)
TRICHLOROETHYLENE (TCE)

Site History:

The site is located east and adjacent to the Riverside Downtown Metrolink Station in Riverside, California (Figures 1 and 2). The site is comprised of multiple known addresses, including: 3034 and 3084 10th Street, 3010 11th Street, and 3009, 3021, and 3087 12th Street in Riverside, California. Assessor Parcel Nos. include 211-201-004, -006, -007, -008, -026, -027, -028, -030, -037, -039 (County of Riverside). The site is comprised of multiple industrial structures, vacant lots, and two residential structures. The site is divided into the following areas for clarity

Area A, former So. Cal. Gas (current Mad Atom LLC) at 3084 East 10th Street in northwest portion of the site.

,h Area B, former Home Oil and Royal Citrus/MLM Trucking (current storage yard for Mad Atom LLC) at 3034 East 10th Street in the northeast portion of the site.

,h Area C, former Food Machinery and Chemical Corporation (FMC Corp.) (current Mad Atom LLC) at 3075 and 3087 12th Street in southwest portion of the site.

,h Area D, former Campbell Oil and Poma Distributing at 3010 11th Street in southeast portion of the site.

,h Area E, residential at 3009 and 3021 12th Street in southeast portion of the site.

The on-site Southern California Gas Company (So. Cal. Gas)/Riverside Gas and Electric Light Company at 3084 East 10th Street (Area A) was reported as a small-quantity generator of hazardous materials and a manufactured gas plant (MGP). It operated from 1888 to 1911 and changed ownership from the Riverside Gas and Electric Light Company to the Edison Electric Company and to So. Cal. Gas. From 1911 to 1959, So. Cal. Gas utilized the site for the storage of natural gas with a gas booster pump house. FMC Corp. acquired the site in 1959 and reportedly handled waste oil and solvents during its use of the site until 1980. A number of evaluations were conducted to establish the presence of the MGP-related contaminants: first in 1993 (Preliminary Endangerment

Assessment), then in 2002 and 2004. The evaluations encountered impacts from polynuclear aromatic hydrocarbons (PAHs) and volatile organic compound (VOC) impacts at the site, as well as other contaminants such as lead, arsenic, and cyanide.

A health risk assessment was conducted to evaluate the contaminant drivers for human health risks at the site. It was concluded that levels of PAHs, benzidine, tetrachloroethylene (PCE), naphthalene, polychlorinated biphenyls (PCBs), arsenic, and lead were present in some locations at concentrations that could be detrimental to future residential populations. The primary contaminant of concern was concluded to be PAHs in soil. The selected remedial action for the site was excavation and transport of soils for ex-situ treatment at a thermal desorption facility. A Remedial Action Plan (RAP) and Remedial Design and Implementation Plan were approved between 2007 and 2010 by the DTSC. Field activities implementing the RAP were conducted between July 2010 and February 2011.

Excavations varied from two feet below ground surface (bgs) in shallow-impacted areas to 52 feet bgs in deep total petroleum hydrocarbons (TPH)-impacted areas. Approximately 45,042 tons of non-hazardous soil was excavated during the remedial implementation. After excavation and backfilling, a soil gas monitoring program was established. The soil gas monitoring indicated a stabilizing trend for benzene, PCE, trichloroethylene (TCE), and naphthalene. Concentrations of contaminants of concern, primarily PAHs exceeding the health screening levels, were left in-place in soil in inaccessible areas of the site. The on-site facility FMC Corp. at 3087 and 3075 12th Street (Area C) was listed under the SLIC database for an open, inactive case with the Santa Ana Regional Water Quality Control Board (RWQCB). According to GeoTracker, VOCs were detected in several emergency supply wells owned by the City of Riverside in the early 1980s in the proximity of the former FMC Corp. Several evaluations at the former FMC Corp., both on-site and offsite, were conducted; the evaluations concluded that FMC Corp. could not be considered the primary responsible party of the contaminated groundwater plume.

The on-site facility Glen Campbell/Former Poma Distributing Company at 3010 11th Street (Area D) was listed under the SLIC database for an open, inactive case with the Santa Ana RWQCB.

Comments:		DTSC approved the RAP and the Negative Declaration for the site. The site's soil is contaminated with elevated levels of polycyclic aromatic hydrocarbons (PAHs), total petroleum hydrocarbons (TPHs), volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs), benzidine, lead and arsenic. The selected remedial alternative is the excavation of all contaminated soil above site target criteria. The excavated soil will be removed and transported off-site for treatment/recycling or disposal. It is expected that approximately 100,000 tons on contaminated soil will be removed from the site. The excavated area will be restored by backfilling with clean imported soil, followed by compacting and grading.

A numeric estimate of the relative severity of a hazardous substance release or potential release based on: (1) the relative potential of substances to cause hazardous situations; (2) the likelihood and rate at which the substances

may affect human and environmental receptors; and (3) the severity and magnitude of potential effects. The score is computed using the hazard ranking system (HRS).

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program:

DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List:

NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jul 26, 2022

National Priority List - Proposed:

PROPOSED NPL

Sites proposed - by the EPA, the state agency, or concerned citizens - for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jul 26, 2022

Deleted NPL:

DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jul 26, 2022

SEMS List 8R Active Site Inventory:[SEMS](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Nov 23, 2022

SEMS List 8R Archive Sites:[SEMS ARCHIVE](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Nov 23, 2022

Inventory of Open Dumps, June 1985:[ODI](#)

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

Comprehensive Environmental Response, Compensation and Liability Information System -[CERCLIS](#)**CERCLIS:**

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands:[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action:[RCRA CORRACTS](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Sep 5, 2022

RCRA non-CORRACTS TSD Facilities:[RCRA TSD](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Sep 5, 2022

RCRA Generator List:[RCRA LQG](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Sep 5, 2022

RCRA Small Quantity Generators List:[RCRA SQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Sep 5, 2022

RCRA Very Small Quantity Generators List:[RCRA VSQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Sep 5, 2022

RCRA Non-Generators:[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Sep 5, 2022

RCRA Sites with Controls:[RCRA CONTROLS](#)

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Sep 5, 2022

Federal Engineering Controls-ECs:[FED ENG](#)

This list of Engineering controls (ECs) is provided by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Oct 27, 2022

Federal Institutional Controls- ICs:

FED INST

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Oct 27, 2022**Land Use Control Information System:**

LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006**Institutional Control Boundaries at NPL sites:**

NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Jul 26, 2022**Emergency Response Notification System:**

ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986**Emergency Response Notification System:**

ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989**Emergency Response Notification System:**

ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Nov 6, 2022**The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:**

FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 13, 2022**FEMA Underground Storage Tank Listing:**

FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan:

FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Delisted Facility Response Plans:

DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Historical Gas Stations:

HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries:

REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Aug 30, 2022

Petroleum Product and Crude Oil Rail Terminals:

BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jun 29, 2022

LIEN on Property:

SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Nov 23, 2022

Superfund Decision Documents:

SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Sep 28, 2022

State**State Response Sites:**

RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Oct 17, 2022

EnviroStor Database:

ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Oct 17, 2022

Delisted State Response Sites:

DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Oct 17, 2022

Solid Waste Information System (SWIS):

SWF/LF

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Nov 7, 2022

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels:

SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Waste Management Unit Database:

WMUD

The Waste Management Unit Database System tracks and inventories waste management units. CCR Title 27 contains criteria stating that Waste Management Units are classified according to their ability to contain wastes. Containment shall be determined by geology, hydrology, topography, climatology, and other factors relating to the ability of the Unit to protect water quality. Water Code Section 13273.1 requires that operators submit a water quality solid waste assessment test (SWAT) report to address leak status. The WMUDS was last updated by the State Water Resources control board in 2000.

Government Publication Date: Jan 1, 2000

EnviroStor Hazardous Waste Facilities:

HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Oct 17, 2022

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report:

SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Construction and Demolition Debris Recyclers:

C&D DEBRIS RECY

This listing of Construction and Demolition Debris Recyclers is maintained by the California Intergrated Waste Management Board-common C&D materials include lumber, drywall, metals, masonry (brick, concrete, etc.), carpet, plastic, pipe, rocks, dirt, paper, cardboard, or green waste related to land development.

Government Publication Date: Jun 20, 2018

Recycling Centers:

RECYCLING

This list of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Oct 11, 2022

Listing of Certified Processors:

PROCESSORS

This list of Certified Processors that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Oct 11, 2022

Listing of Certified Dropoff, Collection, and Community Service Programs:

CONTAINER RECY

This list of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Oct 11, 2022

Land Disposal Sites:

LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Nov 16, 2022

Leaking Underground Fuel Tank Reports:

LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Nov 16, 2022

Delisted Leaking Storage Tanks:

DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Nov 16, 2022

Permitted Underground Storage Tank (UST) in GeoTracker:

UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Oct 14, 2022

Proposed Closure of Underground Storage Tank Cases:

UST CLOSURE

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

Government Publication Date: May 5, 2021

Historical Hazardous Substance Storage Information Database:

HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Statewide Environmental Evaluation and Planning System:

UST SWEEPS

The Statewide Environmental Evaluation and Planning System (SWEEPS) is a historical listing of active and inactive underground storage tanks made available by the California State Water Resources Control Board (SWRCB).

Government Publication Date: Oct 1, 1994

Aboveground Storage Tanks:

AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

SWRCB Historical Aboveground Storage Tanks:

AST SWRCB

A list of aboveground storage tanks made available by the California State Water Resources Control Board (SWRCB). Effective January 1, 2008, the Certified Unified Program Agencies (CUPAs) are vested with the responsibility and authority to implement the Aboveground Petroleum Storage Act (APSA).

Government Publication Date: Dec 1, 2007

Oil and Gas Facility Tanks:

TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

Government Publication Date: Oct 6, 2022

Delisted Storage Tanks:

DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Nov 15, 2022

California Environmental Reporting System (CERS) Tanks:

CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Oct 7, 2022

Delisted California Environmental Reporting System (CERS) Tanks:

DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Oct 7, 2022

Historical Hazardous Substance Storage Container Information - Facility Summary:

HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in the 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions:

LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Oct 17, 2022

CALSITES Database:

CALSITES

This historical database was maintained by the Department of Toxic Substance Control (DTSC) for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

Government Publication Date: May 1, 2004

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions:

HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Feb 18, 2021

Deed Restrictions and Land Use Restrictions:

DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Nov 16, 2022

Voluntary Cleanup Program:

VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Oct 17, 2022

GeoTracker Cleanup Program Sites:

CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Delisted Cleanup Program Sites:

[DELISTED CLEANUP](#)

A list of Cleanup Program sites which were once included - and have since been removed from - the list of Cleanup Program Sites in GeoTracker. GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Government Publication Date: Nov 16, 2022

Delisted County Records:

[DELISTED COUNTY](#)

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Dec 16, 2022

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands:

[INDIAN LUST](#)

LUSTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Apr 8, 2022

Underground Storage Tanks (USTs) on Indian Lands:

[INDIAN UST](#)

USTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Apr 8, 2022

Delisted Tribal Leaking Storage Tanks:

[DELISTED ILST](#)

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Oct 14, 2022

Delisted Tribal Underground Storage Tanks:

[DELISTED IUST](#)

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Oct 14, 2022

County

Riverside County - Local Oversight Program List:

[LOP RIVERSIDE](#)

A list of Leaking Underground Storage Tank (LUST) facilities in Riverside County. This list is made available by Riverside County Department of Environmental Health. Environmental Cleanup Program provides oversight of assessments and cleanups at properties that have been, or may have been, contaminated with hazardous substances from LUSTs or releases associated with other commercial/industrial use.

Government Publication Date: Jul 5, 2022

Riverside County - Underground Storage Tanks List:

[UST RIVERSIDE](#)

A list of registered Underground Storage Tank (UST) sites in Riverside County. This list is made available by Riverside County Department of Environmental Health. The Hazardous Materials Management Branch (HMMB) regulates and oversees the inspections of constructions, repairs, upgrades, system operation and removal of UST systems.

Government Publication Date: Jul 5, 2022

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index:

[FINDS/FRS](#)

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 2, 2020

Toxics Release Inventory (TRI) Program:

TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Aug 24, 2021

Perfluorinated Alkyl Substances (PFAS) Releases:

PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Aug 24, 2021

PFOA/PFOS Contaminated Sites:

PFAS NPL

List of National Priorities List (NPL) and related Superfund Alternative Agreement (SAA) sites where PFOA or PFOS contaminants have been found in water and/or soil. The site listing is provided by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Oct 4, 2022

Perfluorinated Alkyl Substances (PFAS) Water Quality:

PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

SSEHRI PFAS Contamination Sites:

PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Access the following for the most current informations <https://pfasproject.com/pfas-contamination-site-tracker/>

Government Publication Date: Dec 12, 2019

National Response Center PFAS Spills:

ERNS PFAS

National Response Center (NRC) calls from 1990 to the most recent complete calendar year where there is indication of Aqueous Film Forming Foam (AFFF) usage. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Data made available by the US Environmental Protection Agency (EPA). Disclaimer: dataset may include initial or misidentified incident data not yet validated or investigated by a federal/state response agency.

Government Publication Date: Feb 23, 2022

Hazardous Materials Information Reporting System:

HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs:

NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Toxic Substances Control Act:

[TSCA](#)

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA:

[HIST TSCA](#)

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing:

[FTTS ADMIN](#)

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing:

[FTTS INSP](#)

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List:

[PRP](#)

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Nov 23, 2022

State Coalition for Remediation of Drycleaners Listing:

[SCRD DRYCLEANER](#)

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS):

[ICIS](#)

The U.S. Environmental Protection Agency's Enforcement and Compliance History Online system incorporates data from the Integrated Compliance Information System - National Pollutant Discharge Elimination System (ICIS-NPDES). ICIS-NPDES is an information management system maintained by the Office of Compliance to track permit compliance and enforcement status of facilities regulated by the NPDES under the Clean Water Act. This data includes permit, inspection, violation and enforcement action information for applicable ICIS records.

Government Publication Date: Oct 15, 2022

Drycleaner Facilities:

[FED DRYCLEANERS](#)

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jun 25, 2022

Delisted Drycleaner Facilities:

DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Jun 25, 2022

Formerly Used Defense Sites:

FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset.

Government Publication Date: Jul 12, 2022

Former Military Nike Missile Sites:

FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents:

PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Jul 7, 2020

Material Licensing Tracking System (MLTS):

MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites:

HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File:

MINES

The Master Index File (MIF) is provided by the United State Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Aug 3, 2022

Surface Mining Control and Reclamation Act Sites:

SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Aug 18, 2022

Mineral Resource Data System:

MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites:

[LM SITES](#)

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Title II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWP). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 1, 2022

Alternative Fueling Stations:

[ALT FUELS](#)

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG) fuel type locations.

Government Publication Date: Oct 10, 2022

Superfunds Consent Decrees:

[CONSENT DECREES](#)

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Sep 15, 2022

Air Facility System:

[AFS](#)

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments:

[SSTS](#)

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 30, 2022

Polychlorinated Biphenyl (PCB) Transformers:

[PCBT](#)

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers:

[PCB](#)

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

State

Dry Cleaning Facilities:

DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Dec 20, 2021

Delisted Drycleaners:

DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Feb 28, 2020

Non-Toxic Dry Cleaning Incentive Program:

DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Feb 28, 2020

Per- and Polyfluoroalkyl Substances (PFAS):

PFAS

List of FAA Part 139 Airports, Selected Landfills, and Chrome Plating Facilities from California Water Boards PFAS Investigations, as well as sites from the State Water Resources Control Board (SWRCB)'s GeoTracker at which one or more of the potential contaminants of concern are in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Feb 15, 2022

PFOA/PFOS Groundwater:

PFAS GW

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.

Government Publication Date: Nov 11, 2022

Hazardous Waste and Substances Site List - Site Cleanup:

HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: May 20, 2021

Toxic Pit Cleanup Act Sites:

TOXIC PITS

The Toxic Pits Cleanup Act (TPCA) list identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. This list was maintained by the State Water Resources Control Board (SWRCB), is no longer maintained, and updates are not planned.

Government Publication Date: Jul 1, 1995

List of Hazardous Waste Facilities Subject to Corrective Action:

DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement:

INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Apr 29, 2021

School Property Evaluation Program Sites:

SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Oct 17, 2022

California Hazardous Material Incident Report System (CHMIRS):

CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Aug 15, 2022

Historical California Hazardous Material Incident Report System (CHMIRS):

HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Handlers from Hazardous Waste Manifest Data:

HAZNET

A list of handlers not otherwise classified as Treatment, Storage, Disposal facilities (TSDF) or generators from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Oct 24, 2016

Generators from Hazardous Waste Manifest Data:

HAZ GEN

List of handlers listed as having generated waste from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Dec 31, 2017

TSDF from Hazardous Waste Manifest Data:

HAZ TSD

List of Treatment, Storage, and Disposal Facilities (TSDFs) from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Dec 31, 2017

Historical Hazardous Waste Manifest Data:

HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

DTSC Registered Hazardous Waste Transporters:

HW TRANSPORT

The California Department of Toxic Substances Control (DTSC) maintains this list of Registered Hazardous Waste Transporters.

Government Publication Date: Dec 9, 2022

Registered Waste Tire Haulers:

WASTE TIRE

This list of registered waste tire haulers is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Oct 11, 2022

California Medical Waste Management Program Facility List:

MEDICAL WASTE

This list of Medical Waste Management Program Facilities is maintained by the California Department of Public Health. The Medical Waste Management Program (MWMP) regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations. This list contains transporters, treatment, and transfer facilities.

Government Publication Date: Oct 31, 2022

Historical Cortese List:

HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders:[CDO/CAO](#)

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Dec 6, 2021

California Environmental Reporting System (CERS) Hazardous Waste Sites:[CERS HAZ](#)

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Oct 7, 2022

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites:[DELISTED HAZ](#)

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker:[GEOTRACKER](#)

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Nov 16, 2022

Mines Listing:[MINE](#)

This list includes mine site locations extracted from the Mines Online database, maintained by the California Department of Conservation. Mines Online (MOL) is an interactive web map designed with GIS features that provide information such as the mine name, mine status, commodity sold, location, and other mine specific data. Please note: Mine location information is provided to assist experts in determining the location of mine operators in accordance with California Civil Code section 1103.4 and reflects information reported by mine operators in annual reports provided under Public Resources Code section 2207. While the Division of Mine Reclamation (DMR) attempts to populate MOL with accurate location information, the DMR cannot guarantee the accuracy of operator reported location information.

Government Publication Date: Jun 23, 2022

Recorded Environmental Cleanup Liens:[LIEN](#)

The California Department of Toxic Substance Control (DTSC) maintains this list of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

Government Publication Date: Aug 3, 2022

Waste Discharge Requirements:[WASTE DISCHG](#)

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Nov 16, 2022

Toxic Pollutant Emissions Facilities:[EMISSIONS](#)

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2020

Clandestine Drug Lab Sites:[CDL](#)

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/ clandestine drug laboratories.

Government Publication Date: Jan 19, 2021

Tribal

No Tribal additional environmental record sources available for this State.

County

Riverside County - Hazardous Waste Generator Sites List:

[HWG RIVERSIDE](#)

A list of Hazardous Waste Generator Sites in the County of Riverside. This list is made available by Riverside County Department of Environmental Health which has been designated as the CUPA for the County.

Government Publication Date: Jul 5, 2022

Riverside County - Disclosure Facility List:

[HZH RIVERSIDE](#)

A list of facilities disclosed to Riverside County Department of Environmental Health (DEH). This list is made available by Riverside County DEH which has been designated as the CUPA for the County. A business is required to establish and submit a Business Plan if the facility handles hazardous material equal to or greater than 55 gallons, 500 pounds or 200 cubic feet at any time during the year.

Government Publication Date: Jul 5, 2022

Riverside County - Medical Waste Facilities:

[MED WST RIVERSIDE](#)

This list of active and inactive medical waste facilities is maintained by the County of Riverside Department of Environmental Health.

Government Publication Date: Feb 9, 2022

Riverside County - California Accidental Release Prevention Program Sites:

[RMP RIVERSIDE](#)

This list of Riverside County California Accidental Release Prevention Program sites is maintained by the County of Riverside Department of Environmental Health. AB 3777 was enacted in 1986 to minimize potential emergencies involving acutely hazardous materials by requiring facilities which handle these materials to submit Risk Management Prevention Plans. The Riverside County Department of Environmental Health Hazardous Materials Branch began implementation of this Program County-wide in January 1991. All cities within Riverside County are included in this list.

Government Publication Date: Jul 5, 2022

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Topographic Information

Current USGS Topo (2015)

Quadrangle(s): Riverside East, CA; Riverside West, CA

Source: USGS 7.5 Minute Topographic Map

Topographic Information

The previous topographic map(s) are created by seamlessly merging and cutting current USGS topographic data. Below are shaded relief map(s), derived from USGS elevation data to show surrounding topography in further detail.

Topographic information at project property:

Elevation: 798.12 ft
Slope Direction: SSW

Hydrologic Information

Wetland

This map shows wetland existence using data from US Fish & Wildlife. Data coverage is shown to the right. Gray indicates no data available in the area.

 Estuarine and Marine Deepwater	 Freshwater Pond
 Estuarine and Marine Wetland	 Lake
 Freshwater Emergent Wetland	 Other
 Freshwater Forested/Shrub Wetland	 Riverine

Geologic Information

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Q

Unit Name:	Quaternary alluvium and marine deposits
Unit Age:	Pliocene to Holocene
Primary Rock Type:	alluvium
Secondary Rock Type:	terrace
Unit Description:	Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly nonmarine, but includes marine deposits near the coast.

Soil Information

SSURGO Soils

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit AoD (2.82%)

Map Unit Name:	Arlington fine sandy loam, deep, 8 to 15 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Arlington(85%)	
horizon H1(0cm to 28cm)	Fine sandy loam
horizon H2(28cm to 127cm)	Sandy loam
horizon H3(127cm to 152cm)	Cemented
horizon H4(152cm to 178cm)	Coarse sandy loam
horizon H4(152cm to 178cm)	Loamy coarse sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: AoD - Arlington fine sandy loam, deep, 8 to 15 percent slopes

Component: Arlington (85%)

The Arlington component makes up 85 percent of the map unit. Slopes are 8 to 15 percent. This component is on alluvial fans. The parent material consists of alluvium derived from granite. Depth to a root restrictive layer, duripan, is 40 to 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD029CA Loamy (1975) ecological site. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Hanford (5%)

Generated brief soil descriptions are created for major soil components. The Hanford soil is a minor component.

Component: Greenfield (5%)

Generated brief soil descriptions are created for major soil components. The Greenfield soil is a minor component.

Component: Ramona (5%)

Generated brief soil descriptions are created for major soil components. The Ramona soil is a minor component.

Map Unit ArB (2.36%)

Map Unit Name:	Arlington loam, deep, 0 to 5 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Arlington(85%)	
horizon H1(0cm to 28cm)	Loam

Soil Information

horizon H2(28cm to 127cm)	Sandy loam
horizon H3(127cm to 152cm)	Cemented
horizon H4(152cm to 178cm)	Coarse sandy loam
horizon H4(152cm to 178cm)	Loamy coarse sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: ArB - Arlington loam, deep, 0 to 5 percent slopes

Component: Arlington (85%)

The Arlington component makes up 85 percent of the map unit. Slopes are 0 to 5 percent. This component is on alluvial fans. The parent material consists of alluvium derived from granite. Depth to a root restrictive layer, duripan, is 40 to 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD029CA Loamy (1975) ecological site. Nonirrigated land capability classification is 3e. Irrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Ramona (5%)

Generated brief soil descriptions are created for major soil components. The Ramona soil is a minor component.

Component: Hanford (5%)

Generated brief soil descriptions are created for major soil components. The Hanford soil is a minor component.

Component: Greenfield (5%)

Generated brief soil descriptions are created for major soil components. The Greenfield soil is a minor component.

Map Unit BuC2 (54.09%)

Map Unit Name:	Buren fine sandy loam, 2 to 8 percent slopes, eroded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Moderately well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Buren(85%)

horizon H1(0cm to 30cm)	Fine sandy loam
horizon H2(30cm to 71cm)	Loam
horizon H3(71cm to 94cm)	Loam
horizon H4(94cm to 145cm)	Cemented

Component Description:

Minor map unit components are excluded from this report.

Map Unit: BuC2 - Buren fine sandy loam, 2 to 8 percent slopes, eroded

Component: Buren (85%)

The Buren component makes up 85 percent of the map unit. Slopes are 2 to 8 percent. This component is on alluvial fans. The parent material consists of alluvium derived from mixed sources. Depth to a root restrictive layer, duripan, is 37 to 40 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD029CA Loamy (1975) ecological site. Nonirrigated land capability classification is 3e. Irrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 1 percent. There are no saline horizons within 30 inches of the soil surface.

Soil Information

Component: Buren (3%)

Generated brief soil descriptions are created for major soil components. The Buren soil is a minor component.

Component: Arlington (3%)

Generated brief soil descriptions are created for major soil components. The Arlington soil is a minor component.

Component: Cajalco (3%)

Generated brief soil descriptions are created for major soil components. The Cajalco soil is a minor component.

Component: Unnamed (2%)

Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Component: Wyman (2%)

Generated brief soil descriptions are created for major soil components. The Wyman soil is a minor component.

Component: Hanford (2%)

Generated brief soil descriptions are created for major soil components. The Hanford soil is a minor component.

Map Unit Cf (3.06%)

Map Unit Name:	Chino silt loam, drained, saline-alkali
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	0cm
Drainage Class - Dominant:	Somewhat poorly drained
Hydrologic Group - Dominant:	C/D - These soils have moderately high runoff potential when drained and high runoff potential when undrained.

Major components are printed below

Chino(85%)

horizon H1(0cm to 36cm)	Silt loam
horizon H2(36cm to 69cm)	Silty clay loam
horizon H3(69cm to 152cm)	Silty clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Cf - Chino silt loam, drained, saline-alkali

Component: Chino (85%)

The Chino component makes up 85 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains. The parent material consists of alluvium derived from granite. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is rarely flooded. It is not ponded. A seasonal zone of water saturation is at 0 inches during January, February, March. Organic matter content in the surface horizon is about 2 percent. This component is in the R019XD068CA Silty Basin ecological site. Nonirrigated land capability classification is 4w. Irrigated land capability classification is 3w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. The soil has a moderately saline horizon within 30 inches of the soil surface.

Component: Unnamed (5%)

Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Component: Chino (5%)

Generated brief soil descriptions are created for major soil components. The Chino soil is a minor component.

Component: Unnamed (3%)

Soil Information

Map Unit CkF2 (5.66%)

Map Unit Name:	Cieneba rocky sandy loam, 15 to 50 percent slopes, eroded
Bedrock Depth - Min:	36cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Somewhat excessively drained
Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.

Major components are printed below

Cieneba(75%)

horizon H1(0cm to 36cm)	Sandy loam
horizon H2(36cm to 56cm)	Weathered bedrock

Component Description:

Minor map unit components are excluded from this report.

Map Unit: CkF2 - Cieneba rocky sandy loam, 15 to 50 percent slopes, eroded

Component: Cieneba (75%)

The Cieneba component makes up 75 percent of the map unit. Slopes are 15 to 50 percent. This component is on uplands, hills. The parent material consists of residuum weathered from igneous rock. Depth to a root restrictive layer, bedrock, paralithic, is 14 to 22 inches. The natural drainage class is somewhat excessively drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD060CA Shallow Loamy (1975) ecological site. Nonirrigated land capability classification is 7e. This soil does not meet hydric criteria.

Component: Rock outcrop (10%)

Generated brief soil descriptions are created for major soil components. The Rock outcrop soil is a minor component.

Component: Unnamed (3%)

Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Component: Friant (3%)

Generated brief soil descriptions are created for major soil components. The Friant soil is a minor component.

Component: Escondido (3%)

Generated brief soil descriptions are created for major soil components. The Escondido soil is a minor component.

Component: Vista (3%)

Generated brief soil descriptions are created for major soil components. The Vista soil is a minor component.

Component: Fallbrook (3%)

Generated brief soil descriptions are created for major soil components. The Fallbrook soil is a minor component.

Map Unit FaD2 (0.65%)

Map Unit Name:	Fallbrook sandy loam, 8 to 15 percent slopes, eroded
Bedrock Depth - Min:	61cm
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Fallbrook(85%)

horizon H1(0cm to 36cm)	Sandy loam
horizon H2(36cm to 61cm)	Sandy clay loam
horizon H3(61cm to 71cm)	Bedrock

Soil Information

Component Description:

Minor map unit components are excluded from this report.

Map Unit: FaD2 - Fallbrook sandy loam, 8 to 15 percent slopes, eroded

Component: Fallbrook (85%)

The Fallbrook component makes up 85 percent of the map unit. Slopes are 8 to 15 percent. This component is on uplands, hills. The parent material consists of residuum weathered from granodiorite and/or residuum weathered from tonalite. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD029CA Loamy (1975) ecological site. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 4e. This soil does not meet hydric criteria.

Component: Buren (3%)

Generated brief soil descriptions are created for major soil components. The Buren soil is a minor component.

Component: Cienega (3%)

Component: Vista (3%)

Generated brief soil descriptions are created for major soil components. The Vista soil is a minor component.

Map Unit GyC2 (4.11%)

Map Unit Name:	Greenfield sandy loam, 2 to 8 percent slopes, eroded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Greenfield(85%)

horizon H1(0cm to 66cm)	Sandy loam
horizon H2(66cm to 109cm)	Fine sandy loam
horizon H3(109cm to 152cm)	Loam
horizon H4(152cm to 183cm)	Stratified loamy sand to sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: GyC2 - Greenfield sandy loam, 2 to 8 percent slopes, eroded

Component: Greenfield (85%)

The Greenfield component makes up 85 percent of the map unit. Slopes are 2 to 8 percent. This component is on alluvial fans, terraces. The parent material consists of alluvium derived from granite. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD029CA Loamy (1975) ecological site. Nonirrigated land capability classification is 3e. Irrigated land capability classification is 2e. This soil does not meet hydric criteria.

Component: Pachappa (3%)

Soil Information

Generated brief soil descriptions are created for major soil components. The Pachappa soil is a minor component.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *RIVERSIDE* County: **2**

- Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L*
- Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L*
- Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L*

Federal Area Radon Information for *RIVERSIDE* County

No Measures/Homes:	24
Geometric Mean:	0.3
Arithmetic Mean:	0.3
Median:	0.5
Standard Deviation:	0.8
Maximum:	1.7
% >4 pCi/L:	0
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the EPA/State Residential Radon Survey of California conducted during 1989-90. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Federal Sources

FEMA National Flood Hazard Layer

FEMA FLOOD

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data

INDOOR RADON

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data

PWSV

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level

RADON ZONE

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS)

SDWIS

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database

SSURGO

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data

US WETLAND

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo

US TOPO

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology

US GEOLOGY

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System

FED USGS

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

Wells from NWIS

FED USGS

The U.S. Geological Survey's National Water Information System (NWIS) is the nation's principal repository of water resources data. The NWIS includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIW dataset contains select Site Types from the overall NWIS Sites data, limited to the following Group Site Types only: Groundwater Group Site Types: Well, Collector or Ranney type well, Hyporheic-zone well,

Appendix

Interconnected Wells, Multiple wells; Spring Group Site Type: Spring; and Other Group Site Types: Aggregate groundwater use, Cistern.

State Sources

Oil and Gas Wells

OGW

A list of Oil and Gas well locations. This is provided by California's Department of Conservation Division of Oil, Gas and Geothermal Resources.

Periodic Groundwater Level Measurement Locations

MONITOR WELLS

Locations of groundwater level monitoring wells in the Department of Water Resources (DWR)'s Periodic Groundwater Levels dataset. The DWR Periodic Groundwater Levels dataset contains seasonal and long-term groundwater level measurements collected by the Department of Water Resources and cooperating agencies.

Well Completion Reports

WATER WELLS

List of wells from the Well Completion Reports data made available by the California Department of Water Resources' (DWR) Online System for Well Completion Reports (OSWCR). Please note that the majority of well completion reports have been spatially registered to the center of the 1x1 mile Public Land Survey System section that the well is located in.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. COUNTY OF RIVERSIDE DEPARTMENT OF HEALTH

4065 COUNTY CIRCLE DR. RIVERSIDE, CA. 92503 (Mailing Address - P.O. Box 7600 92513-7600)

September 27, 1989

Mr. David Adams
Riverside Community Hospital
4445 Magnolia
Riverside, CA 92501

Dear Mr. Adams:

This letter confirms the completion of site investigation and remedial action at the above site. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is our position that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at this site. Nor does it relieve you of the responsibility to cleanup existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

If you have any questions regarding this matter, please contact our office at (714) 358-5055.

Sincerely,

Wendy G. Sheridan
Hazardous Materials Specialist

State FOIA Request: 4440 Brockton Ave, Riverside, CA

RSB Assessments <assessments@rsbenv.com>

Thu 1/12/2023 6:40 AM

To: PRARRequests@calepa.ca.gov <PRARRequests@calepa.ca.gov>

Cc: RSB Assessments <assessments@rsbenv.com>

Hello,

RSB Environmental is currently conducting the Phase I Environmental Site Assessment for the property located at *4440 Brockton Ave, Riverside, CA*

The ASTM Practice E1527-13 Standard Practice of Environmental Site Assessments requires that a records search be conducted with local regulatory departments for information regarding the subject property. Of particular interest are the following items:

- Records regarding hazardous materials usage/storage/incidents or known environmental concerns/contamination which may have affected the property.
- Records regarding above ground or underground storage tank (UST) systems, which are currently or historically located at the property.
- Record of septic systems installation and repairs at the subject property.
- Records of wells in connection with the subject property.

Please call (832.291.3473) or email (assessments@rsbenv.com) me to discuss the file information or if you require further information. Thank you for your time and attention regarding this matter.

Regards,

Sachin Butala, P.E.

Riverside Public Records Request :: W012525-011223

Riverside Records Portal <riversideca@mycusthelp.net>

Thu 1/12/2023 6:49 AM

To: RSB Assessments <assessments@rsbenv.com>

Dear Sachin:

Thank you for your interest in public records of the City of Riverside. Your request was received by the Public Records Advocate on 1/12/2023 and given the reference number W012525-011223 for tracking purposes.

Record(s) Requested: Hello, RSB Environmental is currently conducting Phase I Environmental Site Assessment for the below mentioned property: Located at: 4440 Brockton Ave, Riverside, CA As a part of these assessment, we wish to determine whether government agencies possess records on the subject property that may include potential concerns. We request the following information: Copies of any records of outstanding or open building or fire code violations at the property. Copies of any records indicating the installation and/or removal of an above ground or underground storage tank at the property. Copies of any records indicating that the fire department has responded to the property for the purpose of cleaning up a release of hazardous materials. Copies of any building permits or any open building permits at the property. Copies of Certificates of Occupancy for the property. Please call (832.291.3473) or email (assessments@rsbenv.com) me to discuss the file information or if you require further information. Thank you for your time and attention regarding this matter.

The request will be forwarded to appropriate department(s) for processing.

Monitor request progress at the link below. The Public Records Advocate will email you when the request is complete. Thank you for using the Riverside Records Portal.

Carmen Soto
City Clerk's Office
3900 Main Street
Riverside, CA 92522

RE: Limited Phase II Environmental Site Assessment for:

4468 Brockton Avenue

Riverside, Riverside County, California 98501

RSB Project No. 2203037

To Whom It May Concern:

Enclosed please find copy of the Limited Phase II Environmental Site Assessment that was completed for property located at 4468 Brockton Avenue, Riverside, Riverside County, California 98501.

Services performed under this contract were conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing under similar conditions. In preparing this report, RSB Environmental has relied on information derived from secondary sources and personal interviews. Except as set forth in this report, RSB Environmental has made no independent investigation as to the accuracy or completeness of the information derived from the secondary sources and personal interviews and has assumed that such information was accurate and complete.

RSB Environmental appreciates the opportunity to provide you professional environmental services. Should you have any questions regarding this report or the property, please feel free to contact us at (832) 291-3473.

Respectfully submitted,

Sachin Butala, P.E.

EXECUTIVE SUMMARY

RSB Environmental (RSB) was retained by Pixis, LLC, to perform a Limited Phase II Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations set forth by RSB's proposal dated March 4, 2022 for the property located at 4468 Brockton Avenue, Riverside, Riverside County, California 98501 (the "Subject Property").

The Limited Phase II ESA on-site field activities were performed on March 18, 2022. The project objective was to assess potential subsurface contamination based on the recognized environmental conditions (RECs) identified on Phase I Environmental Site Assessment performed by RSB Environmental, dated January 24, 2022.

Subject Property Improvements and Current Use

The Subject Property is a currently improved with One (1) building approximately 1,742 square feet (SF). Based on the information obtained from Riverside County Assessor's Office, the existing building was developed on the Subject Property in 1939. Since then the Subject Property has been used for commercial purposes.

RSB Environmental identified the following *recognized environmental condition (REC)* in connection with the Subject Property:

- Based on the review of the City Directory, the Subject Property has been an automotive facility at least from 1941 till 1965, and 1991 till the present, and a Rug Cleaning facility at least from 1966 until 1969. Tetrachloroethylene was identified as the chemical used during rug cleaning operations. These solvents, even when properly stored and disposed of, can be released from these facilities in small, frequent releases through floor drains, cracked concrete, and sewer systems. Chlorinated solvents are highly mobile chemicals that can easily accumulate in the soil. Reviewing local agency records is not likely to produce any additional information as the dry cleaners operated during a time period with little or no regulatory oversight. Additionally, any auto repair facilities are an environmental concern due to their typical usage of hazardous substances such as petroleum and hydraulic fluids and halogenated solvents. During the site reconnaissance, RSB observed staining in the auto repair area. Based on the historic use of the property as a rug cleaning facility, long-term (55 years) association of the Subject Property with automotive repair and servicing operations, unknown housekeeping practices the potential exists that spills/leaks might have occurred and not been reported; and impacted the subsurface condition at the Subject Property. This is considered a *Recognized Environmental Condition (REC)*.

Laboratory Analysis

For the Subject Property, a total of Four (4) soil samples were submitted to the Pace Analytical Laboratory in Mt. Juliet, TN for initial analysis. Pace Analytical, which is accredited by the National Environmental Laboratory Accreditation Program (NELAP), analyzed the samples for Volatile Organic Compounds (VOCs) using EPA Test Method 8260 and Total Petroleum Hydrocarbons (TPH) GRO, DRO and Oil & Grease using EPA Test Method 8015 and 1664A. The laboratory analytical report is provided in **Appendix B**.

Findings, Conclusions and Recommendations

According to the laboratory analytical results, none of the chemical of concerns exceeded the California Regional Water Quality Control Board screening levels for soil samples.

Based on the findings of subsurface investigation through Limited Phase II ESA, it can be concluded that no further investigation or cleanup is necessary to further assess the subsurface condition at the Subject Property.

1.0 INTRODUCTION

RSB Environmental (RSB) was retained by Pixis, LLC, to perform a Limited Phase II Environmental Site Assessment (ESA) for the property located at 4468 Brockton Avenue, Riverside, Riverside County, California 98501. The Limited Phase II ESA on-site field activities were performed on March 18, 2022. The project objective was to evaluate potential impacts to subsurface of the subject property.

The scope of work for this Limited Phase II ESA was based on the recognized environmental conditions (RECs) identified on Phase I Environmental Site Assessment performed by RSB Environmental, dated January 24, 2022. The project objective was to evaluate potential impacts to subsurface of the subject property. **Figure 1** shows general site location. **Figure 2** shows the sampling locations at the Subject Property.

1.1 Purpose

The purpose of the Phase II ESA was to evaluate potential impacts to subsurface of the subject property.

1.2 Limitation of Investigation

This report has been prepared in accordance with generally accepted environmental methodologies referred to in ASTM E1903-19, and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report. The findings and conclusions of this investigation is restricted within the area of sampling. No Phase II ESA can eliminate all uncertainty. Furthermore, any sample, either surface or subsurface, taken for chemical testing may or may not be representative of a larger population. Professional judgment and interpretation are inherent in the process, and even when exercised in accordance with objective scientific principles, uncertainty is inevitable. Additional assessment beyond that which was reasonably undertaken may reduce the uncertainty.

1.3 User Reliance

This Phase II Environmental Site Assessment Report was prepared for the sole use of Pixis, LLC and their respective affiliates, investors, and attorneys. No other party should rely on the information contained herein without prior written consent of RSB Environmental and Pixis, LLC.

2.0 SITE DESCRIPTION

2.1 Ownership and Location

According to the Riverside County Assessor's Office, the Subject Property is currently owned by Daddys Auto Group Inc.

The Subject Property is located at 4468 Brockton Avenue, Riverside, Riverside County, California 98501. The Subject Property includes one (1) rectangular shaped parcel, identified by the Riverside County Assessor's Office as 217060009 totaling approximately 0.17 acres. The Subject Property is located approximately 450 feet on the southeast intersection of Brockton Avenue and 14th Street.

2.2 Subject Property Improvements and Current Use

Subject Property Improvements and Current Use
The Subject Property is a currently improved with One (1) building approximately 1,742 square feet (SF). Based on the information obtained from Riverside County Assessor's Office, the existing building was developed on the Subject Property in 1939. Since then the Subject Property has been used for commercial purposes. RSB Environmental identified the following <i>recognized environmental condition (REC)</i> in connection with the Subject Property: Based on the review of the City Directory, the Subject Property has been an automotive facility at least from 1941 till 1965, and 1991 till the present, and a Rug Cleaning facility at least from 1966 until 1969. Tetrachloroethylene was identified as the chemical used during rug cleaning operations. These solvents, even when properly stored and disposed of, can be released from these facilities in small, frequent releases through floor drains, cracked concrete, and sewer systems. Chlorinated solvents are highly mobile chemicals that can easily accumulate in the soil. Reviewing local agency records is not likely to produce any additional information as the dry cleaners operated during a time period with little or no regulatory oversight. Additionally, any auto repair facilities are an environmental concern due to their typical usage of hazardous substances such as petroleum and hydraulic fluids and halogenated solvents. During the site reconnaissance, RSB observed staining in the auto repair area. Based on the historic use of the property as a rug cleaning facility, long-term (55 years) association of the Subject Property with automotive repair and servicing operations, unknown housekeeping practices the potential exists that spills/leaks might have occurred and not been reported; and impacted the subsurface condition at the Subject Property. This is considered a <i>Recognized Environmental Condition (REC)</i>.

3.0 SAMPLING AND ANALYSIS

3.1 Scope of Work

The Limited Phase II ESA involved the evaluation and sampling of subsurface soil at Four (4) locations. The depths of borings were between 13 feet to 15 feet below ground surface (bgs) which were based on the recognized environmental conditions stated in Phase I Environmental Site Assessment report performed by RSB Environmental. Geoprobe® was used for soil borings. Soil was continuously sampled throughout the depth of the soil borings. All soil samples were visually inspected, and field screened for potential petroleum hydrocarbons exhibiting the greatest potential for impacts (i.e. staining, odor or highest PID reading).

Note: RSB advanced the borings up to 15 feet and encountered refusal. Groundwater was not encountered till 15 feet bgs. Therefore, no groundwater samples were collected.

3.2 Subsurface Sampling

Field activities included collection of subsurface soil to assess the subsurface condition at the Subject Property. The Limited Phase II ESA field work was conducted on March 18, 2022 and in accordance with standard environmental engineering practices.

RSB retained GeoRockers Drilling under a subcontractor agreement for drilling work. Mr. Jim Bean, Professional Geologist collected subsurface soil samples. Four (4) soil borings were drilled to different depths ranging from 13 feet to 15 feet.

The Final Limited Phase II ESA sampling locations are shown in **Figure 2**. The field investigation activities that include subsurface samplings are:

- Four (4) soil samples collected from Four (4) borings

The soil cores were examined in the field to document lithology, color, moisture content, and visual or olfactory evidence of chemical impact. In addition, the samples were scanned with an Organic Vapor Monitor (OVM) equipped with a Photoionization Detector (PID) to detect the presence of volatile organic vapors. Based on the PID readings and visual or olfactory evidence, one or two soil samples were collected from each boring. The soil samples were placed in laboratory-supplied, method-specified containers. The samples were immediately stored on ice in coolers, and transported under chain-of-custody control to Pace Analytical, a National Environmental Laboratory Accreditation Program (NELAP)-certified laboratory for analysis. At the completion of field activities, the soil cores were backfilled with unused soil cores along with bentonite chips and hydrated with water.

Please refer to **Table 1** for the sampling location and **Table 2** for a summary of analytical results of soil samples. Non-dedicated equipment and downhole tools were decontaminated before the start of drilling operations and between each boring location. Continuous soil samples from the ground surface to the final completion depth were evaluated at each boring location. A representative portion of every sample was evaluated to determine sampling location depth. Mr. Jim Bean, Professional Geologist, was present at the Subject Property during drilling operation to monitor the quality of work.

The samples were shipped to Pace Analytical Laboratory in Mt. Juliet, TN.

3.3 *Laboratory Analysis*

Laboratory Analysis

For the Subject Property, a total of Four (4) soil samples were submitted to the Pace Analytical Laboratory in Mt. Juliet, TN for initial analysis. Pace Analytical, which is accredited by the National Environmental Laboratory Accreditation Program (NELAP), analyzed the samples for Volatile Organic Compounds (VOCs) using EPA Test Method 8260 and Total Petroleum Hydrocarbons (TPH) GRO, DRO and Oil & Grease using EPA Test Method 8015 and 1664A. The laboratory analytical report is provided in *Appendix B*.

4.0 FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

4.1 *Findings, Conclusions and Recommendations*

Findings, Conclusions and Recommendations
According to the laboratory analytical results, none of the chemical of concerns exceeded the California Regional Water Quality Control Board screening levels for soil samples. Based on the findings of subsurface investigation through Limited Phase II ESA, it can be concluded that no further investigation or cleanup is necessary to further assess the subsurface condition at the Subject Property.

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Lori A Vahrenkamp
Project Manager

Laboratory Data Package Cover Page

This data package consists of this signature page, the laboratory review checklist, and the following reportable data as applicable:

- R1 - Field chain-of-custody documentation;
- R2 - Sample identification cross-reference;
- R3 - Test reports (analytical data sheets) for each environmental sample that includes:
 - a. Items consistent with NELAC Chapter 5,
 - b. dilution factors,
 - c. preparation methods,
 - d. cleanup methods, and
 - e. if required for the project, tentatively identified compounds (TICs).
- R4 - Surrogate recovery data including:
 - a. Calculated recovery (%R), and
 - b. The laboratory's surrogate QC limits.
- R5 - Test reports/summary forms for *blank* samples;
- R6 - Test reports/summary forms for laboratory control samples (LCSs) including:
 - a. LCS spiking amounts,
 - b. Calculated %R for each analyte, and
 - c. The laboratory's LCS QC limits.
- R7 - Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a. Samples associated with the MS/MSD clearly identified,
 - b. MS/MSD spiking amounts,
 - c. Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d. Calculated %Rs and relative percent differences (RPDs), and
 - e. The laboratory's MS/MSD QC limits
- R8 - Laboratory analytical duplicate (if applicable) recovery and precision:
 - a. The amount of analyte measured in the duplicate,
 - b. The calculated RPD, and
 - c. The laboratory's QC limits for analytical duplicates.
- R9 - List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 - Other problems or anomalies.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception Reports. By my signature below, I affirm to the best of my knowledge all problems/anomalies observed by the laboratory have been identified in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Lori A Vahrenkamp
Project Manager

Laboratory Review Checklist: Reportable Data

Laboratory Name: Pace Analytical National		LRC Date: 03/10/2022 17:31				
Project Name: 2202034-Phase II_La Mesa CA 91941		Laboratory Job Number: L1467563-01, 02, 03, 04 and 05				
Reviewer Name: Lori A Vahrenkamp		Prep Batch Number(s): WG1827934, WG1827216, WG1828383, WG1828209, WG1828208, WG1829169, WG1828817 and WG1829747				

# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?			X		
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?	X				
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?	X				
		Were % moisture (or solids) reported for all soil and sediment samples?	X				
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?	X				
		If required for the project, are TICs reported?			X		
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?		X			1
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?		X			2
		Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		Was the LCSD RPD within QC limits?	X				
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?	X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?	X				
		Were MS/MSD RPDs within laboratory QC limits?	X				
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?	X				
		Were analytical duplicates analyzed at the appropriate frequency?	X				
		Were RPDs or relative standard deviations within the laboratory QC limits?	X				
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Was applicable and available technology used to lower the SDL to minimize the matrix interference effects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices and methods associated with this laboratory data package?	X				

1. Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.
2. O = organic analyses; I = inorganic analyses (and general chemistry, when applicable);
3. NA = Not applicable;
4. NR = Not reviewed;
5. ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Review Checklist: Supporting Data

Laboratory Name: Pace Analytical National		LRC Date: 03/10/2022 17:31					
Project Name: 2202034-Phase II_La Mesa CA 91941		Laboratory Job Number: L1467563-01, 02, 03, 04 and 05					
Reviewer Name: Lori A Vahrenkamp		Prep Batch Number(s): WG1827934, WG1827216, WG1828383, WG1828209, WG1828208, WG1829169, WG1828817 and WG1829747					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB):					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS)					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC Section 5.5.10)					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs)					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chapter 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs)					
		Are laboratory SOPs current and on file for each method performed	X
