**BID DESCRIPTION:** This project entails the construction of an earth retaining structure to stabilize the slope, which consists of drilled reinforced concrete caissons embedded to underlying bedrock and a reinforced concrete retaining wall. A Slope mitigation on the non-retaining side of the wall will consist of grading and hydro-seeding. The retaining side of the wall will require the removal and replacement of road pavement, clean imported fill and the construction of an asphalt berm and grouted rip rap. Mailboxes, bollards and one street light adjacent to the slope will need to be removed and replaced during construction.
