### Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 103.6 (86%), Referenced to phase 4:EBT and 8:WBT, Start of Yellow

Natural Cycle: 60

Control Type: Actuated-Coordinated

Splits and Phases: 4: Vista Grande Dr. & Alessandro Bl.

### Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 103.9 (87%), Referenced to phase 4:EBT and 8:WBT, Start of Yellow

Natural Cycle: 60

Control Type: Actuated-Coordinated

Splits and Phases: 4: Vista Grande Dr. & Alessandro Bl.

### Zone Summary

Zone wide Queuing Penalty: 3

October 1, 2020

Ms. Sonya Hooker  
Ruth Villalobos & Associates, Inc.  
3602 Inland Empire Blvd., Suite C310  
Ontario, CA 91764

**SUBJECT: SYCAMORE HILLS DISTRIBUTION CENTER VEHICLE MILES TRAVELLED (VMT) ANALYSIS**

Dear Ms. Sonya Hooker:

The following Vehicle Miles Travelled (VMT) Analysis has been prepared for the proposed Sycamore Hills Distribution Center (**Project**), which is located north of Alessandro Boulevard and east of Barton Street and west of San Geronio Drive within the Sycamore Canyon Business Park Specific Plan (SP) located in the City of Riverside.

**PROJECT OVERVIEW**

The project proposes subdividing the site into two parcels (Parcels 1 and 2), and three lettered parcels (Parcels A, B, and C). Each parcel is proposed to be developed with a high cube transload short-term warehouse building (Buildings A and B). Building A, a 400,000 square foot warehouse, will be constructed on Parcel 1. Building B, a 203,100 square foot warehouse, will be constructed on Parcel 2. Associated improvements include parking, fire lanes, fencing and walls (including retaining walls), landscaping, and water quality treatment areas.

Parcels A and Parcel B consist of existing Restricted Property of natural land, with a supporting jurisdictional feature, totaling approximately 11.6 acres. A 0.67-acre driveway will be constructed through the Restricted Property to provide street access from Alessandro Boulevard to Parcel 1, which would reduce the Restricted Property to 10.93 acres. However, 1.44 acres will be added to Parcel A to mitigate this loss, resulting in a total of 12.37 acres of Restricted Property (net gain of 0.77 acres). A Conservation Easement is proposed to be placed over the amended 12.37 acres of Restricted Property.

A trailhead parking lot is proposed on Parcel C, totaling 1.18 acres, for access to the Sycamore Canyon Wilderness Park. Improvements include a parking lot, sidewalk, shade structure, bike rack, drinking fountain, fencing, and a Fire Department and access gate. Parcel C will be dedicated to the City. Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10<sup>th</sup> Edition, 2017. (1) The proposed Project is anticipated to generate a total of 847 vehicle trip-ends per day. (2)

## BACKGROUND

Changes to California Environmental Quality Act (CEQA) Guidelines were adopted in December 2018, which requires all lead agencies to adopt VMT as a replacement for automobile delay-based level of service (LOS) as the new measure for identifying transportation impacts for land use projects. This statewide mandate takes effect July 1, 2020. To aid in this transition, the Governor's Office of Planning and Research (OPR) released a Technical Advisory on Evaluating Transportation Impacts in CEQA (December of 2018) (**Technical Advisory**). (3) Based on OPR's Technical Advisory, the Western Riverside Council of Governments (WRCOG) prepared a WRCOG SB 743 Implementation Pathway Document Package (March 2019) to assist its member agencies with implementation tools necessary to adopt analysis methodology, impact thresholds and mitigation approaches for VMT. To add to the previous work effort, WRCOG in February 2020 released its Recommended Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment (**WRCOG Guidelines**), which provides recommendations for specific procedures for complying with the new CEQA requirements for VMT analysis to its member agencies. (4) Utilizing the WRCOG Guidelines, the City of Riverside recently adopted updated Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment (**City Guidelines**). (5) The updated City Guidelines have been utilized to prepare this VMT analysis.

## PROJECT SCREENING

Consistent with City Guidelines, projects that meet certain screening thresholds based on their location and project type may be presumed to result in a less than significant transportation impact. The City of Riverside utilizes the WRCOG VMT Screening Tool (**Screening Tool**) to evaluate the following Project Screening Thresholds:

- Transit Priority Area (TPA) Screening
- Low VMT Area Screening
- Project Type Screening

As noted in the City Guidelines, a land use project need only meet one of the above screening thresholds to result in a less than significant impact.

### TPA SCREENING

Consistent with guidance identified in the City Guidelines, projects located within a Transit Priority Area (TPA) (i.e., within ½ mile of an existing "major transit stop"<sup>1</sup> or an existing stop along a "high-quality

---

<sup>1</sup> Pub. Resources Code, § 21064.3 ("Major transit stop" means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").

transit corridor”<sup>2</sup>) may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

Based on the Screening Tool results presented in Attachment A, the Project site is not located within ½ mile of an existing major transit stop, or along a high-quality transit corridor.

**The TPA screening threshold is not met.**

### **LOW VMT AREA SCREENING**

As described in the City Guidelines, “residential and office projects located within a low VMT-generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary.”<sup>3</sup> The Screening Tool uses the sub-regional Riverside Transportation Analysis Model (RIVTAM) to measure VMT performance within individual traffic analysis zones (TAZ’s) within the City. The Project’s physical location based on parcel number is input into the Screening Tool to determine project-generated VMT as compared to the City threshold. Based on the Screening Tool results (see Attachment A), the Project is not located within a low VMT generating zone.

**The Low VMT Area screening threshold is not met.**

### **PROJECT TYPE SCREENING**

The City Guidelines identify that local serving retail or other types of local serving land use projects that are consistent with the current Sustainable Communities Strategy (SCS) or general plan are presumed to have a less than significant impact. City Guidelines also states projects that generate or attract fewer than 110 trips per day are assumed to cause a less than significant impact. As previously noted, the Project is estimated to generate in excess of 110 daily trips and would therefore not be eligible for the project type screening threshold.

**The Project Type screening threshold is not met.**

Since the Project does not meet the City’s project-level VMT screening thresholds, a VMT analysis has been prepared consistent with City Guidelines.

---

<sup>2</sup> Pub. Resources Code, § 21155 (“For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.”).

<sup>3</sup> Page 24 of the City Guidelines

## VMT ANALYSIS METHODOLOGY

VMT thresholds adopted by City Council on June 16, 2020 have been used to prepare this analysis. Based on the adopted VMT thresholds applicable to the Project, a significant impact for VMT would occur if the following condition is met:

- For new office and industrial projects, utilizing a threshold consistent with 15% below the City's current baseline VMT Per Worker.

## PROJECT GENERATED VMT PER EMPLOYEE

The Riverside Transportation Analysis Model (RIVTAM) is a useful tool to estimate VMT as it considers interaction between different land uses based on socio-economic data such as population, households, and employment. RIVTAM is a travel forecasting model that represents a sub-area of the SCAG model. The model was originally completed in 2009 and was later updated to include a 2012 base year and 2040 forecast horizon year. The model was designed to provide a greater level of detail and sensitivity in the Riverside County area as compared to the regional SCAG model. The City Guidelines identifies RIVTAM as the appropriate tool for conducting VMT analysis for land use projects in the City of Riverside.

Project VMT has been calculated using the most current version of RIVTAM, which includes a 2012 base year model and a 2040 horizon year model. Adjustments in socio-economic data (SED) (i.e., employment) for the Project have been made to a separate traffic analysis zone (TAZ) within the RIVTAM model to reflect the Project's proposed land use (i.e., industrial/warehouse type use). A separate TAZ has been utilized in order to isolate trips to/from the Project. Table 1 summarizes the employment factors and employment estimates for the Project.

**TABLE 1: EMPLOYMENT DENSITY FACTORS**

|                                        | <b>Project</b>      |
|----------------------------------------|---------------------|
| Building Square Footage                | 603,100             |
| Employment Density Factor <sup>4</sup> | 1 employee/1,030 SF |
| Employment                             | 586                 |

Adjustments to employment for the Project's TAZ were made to both the RIVTAM base year model (2012) and the cumulative year model (2040). Project-generated home-based work VMT was then calculated for the base year model (2012) and cumulative year model (2040). The VMT is then normalized by dividing by the number of Project employees. As shown in Table 2, the Project base year (2012) VMT per employee is 15.71 and the Project cumulative year (2040) VMT per employee is 17.34.

---

<sup>4</sup> Employee Density Factor was obtained from the County of Riverside General Plan Appendix E-2: Socioeconomic Build-Out Assumptions and Methodology (see Table E-5, Commercial Employment Factors, Page 3).

**TABLE 2: PROJECT VMT PER EMPLOYEE**

|                | 2012 Project | 2040 Project |
|----------------|--------------|--------------|
| VMT            | 9,206        | 10,159       |
| Employment     | 586          | 586          |
| VMT / Employee | 15.71        | 17.34        |

## **CITY OF RIVERSIDE VMT PER EMPLOYEE**

The City of Riverside's current baseline VMT per employee for current baseline conditions is 13.24. As noted in the City Guidelines this information is available through the WRCOG Screening Tool and is shown in Attachment A of this report.

## **PROJECT LEVEL VMT ASSESSMENT**

Table 3 illustrates the comparison between the Project generated VMT per employee to the City of Riverside's current baseline VMT per employee. As shown, the Project would exceed the threshold of 15% below the current baseline City of Riverside VMT per employee for both the baseline and cumulative Project generated VMT. As such, the Project's impact is potentially significant.

**TABLE 3: VMT PER EMPLOYEE COMPARISON**

|                                        | 2012 VMT/Employee | 2040 VMT/Employee |
|----------------------------------------|-------------------|-------------------|
| City of Riverside Current VMT/Employee | 13.24             | 13.24             |
| Project VMT/Employee                   | 15.71             | 17.34             |
| Percent Change                         | +18.66%           | +30.97%           |
| Potentially Significant?               | Yes               | Yes               |

## **PROJECT'S EFFECT ON VMT**

Consistent with City Guidelines, projects that are found to have a potentially significant impact using efficiency-based metrics (such as VMT per employee) should also provide an additional assessment to evaluate a project's effect on VMT. As noted in the City Guidelines, this analysis is performed using the boundary method, which includes all vehicle trips with one or both trip-ends within a specific geographic area of interest (i.e., the City of Riverside). As shown on Table 4, the Project is anticipated to result in a base year (2012) net decrease of 0.200 VMT per employee and a cumulative year (2040) net decrease of 0.091 VMT per employee. The Project's effect on VMT is less than significant.

**TABLE 4: PROJECT'S EFFECT ON CITY OF RIVERSIDE VMT**

|                          | 2012 Without Project | 2012 With Project | 2040 Without Project | 2040 With Project |
|--------------------------|----------------------|-------------------|----------------------|-------------------|
| VMT                      | 5,730,358            | 5,734,341         | 8,723,408            | 8,724,916         |
| Employment               | 119,544              | 120,130           | 228,619              | 229,205           |
| VMT/Employee             | 47.935               | 47.735            | 38.157               | 38.066            |
| Change in VMT            | -0.200               |                   | -0.091               |                   |
| Potentially Significant? | No                   |                   | No                   |                   |

## POTENTIAL VMT REDUCTION STRATEGIES

Transportation demand management (TDM) strategies have been evaluated for the purpose of reducing VMT. The purpose of TDM strategies is to reduce the need for single occupancy automobile trips. The effectiveness of TDM strategies available to individual land use projects in Riverside County was thoroughly evaluated by the SB 743 Implementation TDM Strategy Assessment (February 26, 2019, Fehr & Peers) (**WRCOG Report**) prepared for WRCOG, which evaluated the TDM measures identified in the Quantifying Greenhouse Gas Mitigation Measures (CAPCOA, 2010) (**CAPCOA**) for their relevance to projects in the WRCOG area.

The WRCOG Report indicates that of the 50 transportation measures presented by CAPCOA, only 41 are applicable at a building and site level. The remaining 9 measures are functions of, or depend on, site location and/or actions by local and regional agencies or funders. Based on a review of the 41 transportation measures identified by CAPCOA, the WRCOG Report identifies that only a few of those measures have the potential to be effective at the project level in the predominantly suburban context of the WRCOG area. Evaluation of potentially applicable TDM strategies in the context of the proposed Project is summarized below.

- Measure 1: Increase Diversity of Land Uses (LUT-3). Having different types of land uses near one another can decrease VMT since trips between land use types are shorter and may be accommodated by non-auto modes of transportation. For example, when residential areas are in the same neighborhood as retail and office buildings, a resident does not need to travel outside of the neighborhood to meet his/her trip needs.

Remarks: The Project proposes the construction of two high-cube short-term transload warehouse buildings, totaling 603,100 square feet. In order for the above measure to apply, at least three of the following will be located on-site, or off-site within ¼ mile of the Project: Residential Development, Retail Development, Park, Open Space, or Office. There is residential and limited retail located off-site within ¼ mile south of the Project, and park/open space (Sycamore Canyon Wilderness Park) within a ¼ mile north of the Project. As the proposed Project does not include a mix of land uses within the development site, but is instead located within a sphere of influence to a mix residential and retail uses (i.e., ¼ mile radius), this particular TDM measure would provide a low reduction and is therefore not evaluated further as a means of providing a reduction in Project VMT.

- Measure 2: Provide Pedestrian Network Improvements (SDT-1). Providing a pedestrian access network to link areas of the Project site encourages people to walk instead of drive assuming that desirable destinations are within walking distance of the Project. This mode shift results in people driving less and a reduction in VMT.  
Remarks: There are existing sidewalks along Alessandro Boulevard and Barton Street. The Project is proposing to improve the pedestrian network along the Project frontage and at the intersection of Vista Del Grande & Alessandro Boulevard. As noted in the WRCOG Report and by CAPCOA, this measure would provide a nominal reduction in Project VMT due to the limited new pedestrian connections created.
- Measure 3: Provide Traffic Calming Measure (SDT-2). Providing traffic calming measures encourages people to walk or bike instead of using a vehicle. This mode shift will result in a decrease in VMT. Traffic calming features may include: marked crosswalks, count-down signal timers, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, and others.  
Remarks: The Alessandro Boulevard corridor provides for sidewalk and bike lane enhancements. There is limited opportunity for the Project to implement meaningful enhanced mitigation in this area. This measure is therefore not evaluated further as means of providing a reduction in Project VMT.
- Measure 4: Implement Car-Sharing Program (TRT-9). Implementing a car-sharing program would allow individuals to have on-demand access to a shared fleet of vehicles on an as-needed basis. User costs are typically determined through mileage or hourly rates, with deposits and/or annual membership fees.  
Remarks: It is possible that employers within the Project site could implement car-sharing programs. This may provide car access for employees on an as-needed basis, and thereby alleviate some of the costs and responsibilities of individual car ownership. The effectiveness of this measure is dependent on the ultimate building tenant(s) which are unknown currently. As such, this measure is therefore not evaluated further as means of providing a reduction in Project VMT.
- Measure 5: Increase Transit Service Frequency and Speed (TST-4). This measure serves to reduce transit-passenger travel time through more reduced headways and increased speed and reliability. This makes transit service more attractive and may result in a mode shift from auto to transit which reduces VMT.  
Remarks: The study area is currently served by Riverside Transit Agency (RTA), a public transit agency serving various jurisdictions within Riverside County. RTA Routes 20 and 26 currently provide proximate service (within one-quarter mile) of the Project site. Transit service is reviewed and updated by RTA periodically to address ridership, budget and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. It is recommended that the Applicant work in conjunction with the Lead Agency and RTA to coordinate potential bus service to the Project site. Since implementation of this strategy would require agency implementation it is not applicable for individual development projects. This measure is therefore not evaluated further as means of providing a reduction in Project VMT.
- Measure 6: Encourage Telecommuting and Alternative Work Schedule (TRT-6). Encouraging telecommuting and alternative work schedules reduces the number of commute trips and therefore VMT traveled by employees. Alternative work schedules could take the form of staggered starting times, flexible schedules, or compressed work weeks.

Remarks: The effectiveness of this measure is dependent on the ultimate building tenant(s) which are unknown currently. As such, this measure is therefore not evaluated further as means of providing a reduction in Project VMT.

- Measure 7: Provide Ride-Sharing Programs (TRT-3). This strategy focuses on encouraging carpooling and vanpooling but its ultimate implementation is limited as Measure 6 above.

Remarks: The effectiveness of this measure is dependent on the ultimate building tenant(s) which are unknown currently. As such, this measure is therefore not evaluated further as means of providing a reduction in Project VMT.

The effectiveness of the above-noted TDM measures would be dependent in large part on future Project occupancies, which are unknown at this time. Beyond Project tenancy considerations, land use context is a major factor relevant to the potential application and effectiveness of TDM measures. More specifically, the land use context of the Project is characteristically suburban center. Of itself, the Project's suburban center context acts to limit the range of feasible TDM measures and moderates their potential effectiveness. Relevant discussion in this regard is presented in *WRCOG SB 743 Implementation Pathway Document Package* (Fehr & Peers [for WRCOG]) March 2019, excerpted in pertinent part below:

The Technical Advisory relies on the Quantifying Greenhouse Gas Mitigation Measures, (CAPCOA) 2010 resource document to help justify the 15 percent reduction in VMT threshold stating, “. . . fifteen percent reduction in VMT are achievable at the project level in a variety of place types . . .”. A more accurate reading of the CAPCOA document is that a fifteen percent is the maximum reduction when combining multiple mitigation strategies for the *suburban center*<sup>5</sup> place type. For *suburban*<sup>6</sup> place types 10 percent is the maximum and requires a project to contain a diverse land use mix, workforce housing, and project-specific transit. It is also important to note that the maximum percent reductions were not based on data or research comparing the actual performance of VMT reduction strategies in these place types. Instead, the percentages were derived from a limited comparison of aggregate citywide VMT performance for Sebastopol, San Rafael, and San Mateo where VMT performance ranged from 0 to 17 percent below the statewide VMT/capita average based on data collected prior to 2002. Little evidence exists about the long-term performance of similar TDM strategies in different land use contexts. As such, VMT reductions from TDM strategies cannot be guaranteed in most cases (*WRCOG SB 743 Implementation Pathway Document Package*, pp. 65 – 66).

As indicated in the preceding discussion, even under the most favorable circumstances, projects located

---

<sup>5</sup> **Suburban Center:** A project typically involving a cluster of multi-use development within dispersed, low-density, automobile dependent land use patterns (a suburb). The center may be an historic downtown of a smaller community that has become surrounded by its region's suburban growth pattern in the latter half of the 20th Century. The suburban center serves the population of the suburb with office, retail and housing which is denser than the surrounding suburb (*Quantifying Greenhouse Gas Mitigation Measures*, p. 60).

<sup>6</sup> **Suburban:** A project characterized by dispersed, low-density, single-use, automobile dependent land use patterns, usually outside.

Ms. Sonya Hooker  
Ruth Villalobos & Associates, Inc.

Page 9 of 10

within a suburban center context, such as the proposed Project evaluated here, could realize a maximum 15 percent reduction in VMT through implementation of feasible TDM measures. The Project is estimated to exceed the current City of Riverside VMT per employee by 18.66% in base year (2012) and 30.97% in cumulative year (2040). Given that the maximum percent reduction is 15% through feasible TDM measures, the Project cannot reduce the Project-generated VMT to below the threshold of 15% below the current City of Riverside VMT per employee.

The Project VMT impact is therefore considered ***significant and unavoidable***.

Within a Transit Priority Area (TPA)?  
No (Fail)

Within a low VMT generating TAZ based on Total VMT?  
No (Fail)  
Jurisdictional average 2012 daily total VMT per service population = 27.77  
Project TAZ 2012 daily total VMT per service population = 32.62

Within a low VMT generating TAZ based on Residential Home-Based VMT?  
No (Fail)  
Jurisdictional average 2012 daily residential home-based VMT per capita = 10.77  
Project TAZ 2012 daily residential home-based VMT per capita = 15.23

Within a low VMT generating TAZ based on Home-Based Work VMT?  
No (Fail)  
Jurisdictional average 2012 daily home-based work VMT per worker = 13.24  
Project TAZ 2012 daily home-based work VMT per worker = 15.91

Notes:

- TPA designation is based on October 2016 conditions.
- Screening results are based on location of parcel centroids. If results are deemed considering the full parcel, please refer to the associated map layers to visually review parcel and TAZ boundary relationship.
- If VMT screening is desired for current baseline conditions, contact WRCOG for 2012 and 2040 VMT data. Interpolated VMT results can be obtained using the complete data set.
- VMT results do not account for full length of trips that occur beyond the SCAG region.
