Section 3 – Riverside County Plates .....	C

### 1. Purpose

The purpose of this study is to evaluate the impact of the project on the existing drainage pattern, to quantify any increase in peak runoff rates on the downstream facilities, and to develop the necessary mitigation necessary to offset such impacts.

### 2. Method of Analysis

The site hydrology was based upon Riverside County Flood Control and Water Conversation District Hydrology Manual, from which pertinent soil and rainfall information was obtained.

Storm flows were determined by the "RATIONAL METHOD HYDROLOGY COMPUTER PROGRAM", Riverside County Flood Control & Water Conservation District 1978 Hydrology Manual, produced by Bondamin Engineering.

### 3. Project Description

The proposed mixed-use project consists of multi-family residential dwelling units, multi-tenant commercial buildings, a vehicle fueling station, a drive-thru restaurant, two hotels, a Recreational Vehicle (RV) overnight parking component, and on-site activities (e.g., farmers market, outdoor entertainment).

The residential portion of the project will be constructed on approximately 18.4 acres on the northern half of the project site and includes a total of 482 one-, two- and three- bedroom residential units in 21 three-story buildings. Project plans identify 479,773 square feet of residential space, resulting in a density of 26.2 dwelling units per acre. A total of 886 vehicle parking spaces are proposed for the residential use.

The commercial/retail, vehicle fueling station and drive-thru restaurant portion of the project would be located on approximately 7.6 acres on the southwest corner of the project site and includes a total of 49,500 square feet of multi-tenant lease space for restaurant and commercial retail tenants spread across 8 single-story buildings. The retail areas would generally operate 12 to 15 hours a day, with the exception of the proposed gas station, which would operate 24 hours a day. A total of 417 parking stalls are proposed for the commercial component of the project.

Two hotel buildings would be located on approximately 7.4 acres, near the southeast corner of the project site. The proposed RV Parking is located in the southeast corner of the project site, closest to the I-215/SR 60 interchange, adjacent to the proposed hotels. The RV Parking will contain 23 RV spaces and 23 vehicle stalls. The two, four-story hotels will total 130,000 square feet and contain 229 guest rooms. The hotels will operate independently of each other. The hotels and RV Parking would operate 24 hours a day. A total of 229 parking spaces are proposed for the two hotels.

The proposed development includes provisions for live entertainment and events and a farmers market to serve the proposed residences and surrounding community. The live entertainment would occur within the courtyard in the center of Buildings P1 through P4. The events would occur on occasion, on Fridays, Saturdays, or Sundays.

Events could include farmers market, outdoor entertainment, car shows (demonstration only) and similar type events.

Vehicular access to the project site would be provided by one driveway entrance located east of the site along La Cadena Drive, and two driveways located along the northwest boundary of the site on Orange Street. Residents would primarily access the site through the entrances located at La Cadena Drive and the northern-most driveway along Orange Street; retail customers and hotel visitors would primarily access the site through the driveways along Orange Street.

A Minor Conditional Use Permit has been submitted for freeway oriented signage up to 60 feet in height, as measured from the grade of the adjacent freeway.

As part of the proposed development the applicant has submitted a Parcel Map subdividing 8 parcels into 15 parcels.

A recreational vehicle (RV) parking lot with 27 spaces and 18 associated RV-car spaces would be placed in the southeast end of the project site, south of Hotel 2.

### A. Vicinity Map

## 4. Pre-Development Hydrology

The site is currently vacant and has existing single family residential homes along the North and the Northeast of the site. West of the site is Fremont Elementary School. South and East of the site is Interstate 215 and Highway 60. The University Wash Channel runs through the center of the site and is a trapezoidal Channel with a 10' bottom with 1.5:1 side slopes that is 6.5' deep. Existing RCFC plans (DWG 1-0384) show the channel is designed to convey 1,900 cfs. The University Wash Channel is a RCFC master planned facility, no data is available to support this flow.

Offsite drainage flows from the north and the northeast corner drain into the Channel. Offsite flows located at the northeast corner of the site are from a double 4' x 3' RCB under La Cadena Drive. Existing Caltrans plans (Drainage System No. 35 Drainage Profiles D-79 Contract No. 08-334844 12-31-08) show the existing sizing of the RCB and catch basins with no cfs shown on the plans. Calculations were run for the existing double RCB resulting in 240 cfs. Offsite flows from Knoll Way and Strong Street flow towards the site by a 39" storm drain line (Knoll-Strong Storm Drain Line D-187). The storm drain plans showed no cfs on the plans. Calculations were run for the existing 39" RCP resulting in 46 cfs. Orange Street runoff sumps near Fremont Elementary School and drains into the channel. A map of the existing drainage area is located in Section 1.

## 5. Post-Development Hydrology

The majority of the onsite University Wash Channel will be replaced with a 96" R.C.P. All offsite runoff from the north and the northeast will connect directly to the proposed pipe. Proposed onsite runoff will also connect to the proposed pipe. All onsite runoff will be treated with proposed onsite BMP prior to draining into the proposed pipe. The onsite BMP will have the capacity to bypass the 100yr storm. Catch basins will be installed near Orange Street along the proposed pipe and will act as a bubbler to control the hydraulic grade line in the proposed pipe. A map of the proposed drainage area is located in Section 2.

## 6. Conclusion

The hydrologic calculations provided herein substantiate the design of the proposed project and indicate the following:

- The proposed facilities demonstrate the ability to convey the 100 year storm events as required by the City of Riverside Conditions of Approval
- The post development impacts created by the additional impervious surface will be treated by the project Site Design and Structural BMP's and will have the capacity to bypass the 100yr storm. The on-site hydrodynamic separators were sized according to the Q100 flows determined by the analysis herein.

Therefore, it is our conclusion this project **does not** negatively impact the local community or watershed goals of the Santa Ana River.

 Time of concentration (TC) = 40.24 min.

\*\*\*\*\*  
 Process from Point/Station 7.000 to Point/Station 7.000  
 \*\*\*\* CONFLUENCE OF MINOR STREAMS \*\*\*\*

Along Main Stream number: 2 in normal stream number 2  
 Stream flow area = 5.170(Ac.)  
 Runoff from this stream = 50.623(CFS)  
 Time of concentration = 40.24 min.  
 Rainfall intensity = 1.343(In/Hr)  
 Summary of stream data:

Stream No.	Flow rate (CFS)	TC (min)	Rainfall Intensity (In/Hr)
------------	-----------------	----------	----------------------------

1	7.758	6.63	3.309
2	50.623	40.24	1.343

Largest stream flow has longer time of concentration  
 $Q_p = 50.623 + \text{sum of } Q_b \cdot I_a/I_b$   
 $Q_p = 7.758 * 0.406 = 3.149$   
 $Q_p = 53.773$

Total of 2 streams to confluence:  
 Flow rates before confluence point:  
 7.758 50.623  
 Area of streams before confluence:  
 2.900 5.170

Results of confluence:  
 Total flow rate = 53.773(CFS)  
 Time of concentration = 40.242 min.  
 Effective stream area after confluence = 8.070(Ac.)

\*\*\*\*\*  
 Process from Point/Station 7.000 to Point/Station 4.000  
 \*\*\*\* PIPEFLOW TRAVEL TIME (Program estimated size) \*\*\*\*

Upstream point/station elevation = 835.600(Ft.)  
 Downstream point/station elevation = 833.000(Ft.)  
 Pipe length = 300.00(Ft.) Manning's N = 0.013  
 No. of pipes = 1 Required pipe flow = 53.773(CFS)  
 Nearest computed pipe diameter = 36.00(In.)  
 Calculated individual pipe flow = 53.773(CFS)  
 Normal flow depth in pipe = 25.88(In.)  
 Flow top width inside pipe = 32.37(In.)  
 Critical Depth = 28.57(In.)  
 Pipe flow velocity = 9.89(Ft/s)  
 Travel time through pipe = 0.51 min.  
 Time of concentration (TC) = 40.75 min.

\*\*\*\*\*  
 Process from Point/Station 4.000 to Point/Station 4.000  
 \*\*\*\* CONFLUENCE OF MAIN STREAMS \*\*\*\*

The following data inside Main Stream is listed:

In Main Stream number: 2  
 Stream flow area = 8.070(Ac.)  
 Runoff from this stream = 53.773(CFS)  
 Time of concentration = 40.75 min.  
 Rainfall intensity = 1.335(In/Hr)  
 Summary of stream data:

Stream No.	Flow rate (CFS)	TC (min)	Rainfall Intensity (In/Hr)
------------	-----------------	----------	----------------------------

1	241.703	41.37	1.325
2	53.773	40.75	1.335

Largest stream flow has longer time of concentration

Qp = 241.703 + sum of  

$$Q_b \quad I_a/I_b$$

$$53.773 * 0.993 = 53.370$$

Qp = 295.072

Total of 2 main streams to confluence:

Flow rates before confluence point:

241.703 53.773

Area of streams before confluence:

1.440 8.070

Results of confluence:

Total flow rate = 295.072(CFS)

Time of concentration = 41.365 min.

Effective stream area after confluence = 9.510(Ac.)

\*\*\*\*\*

## Existing 39" RCP Strong Street Worksheet for Circular Channel

Project Description	
Worksheet	Existing 39" RCP Strong Street
Flow Element	Circular Channel
Method	Manning's Formula
Solve For	Discharge
Input Data	
Mannings Coefficient	0.013
Slope	0.003000 ft/ft
Depth	3.25 ft
Diameter	39 in
Results	
Discharge	45.22 cfs
Flow Area	8.3 ft <sup>2</sup>
Wetted Perimeter	10.21 ft
Top Width	7.6e-8 ft
Critical Depth	2.14 ft
Percent Full	100.0 %
Critical Slope	0.005027 ft/ft
Velocity	5.45 ft/s
Velocity Head	0.46 ft
Specific Energy	3.71 ft
Froude Number	9.2e-5
Maximum Discharge	48.65 cfs
Discharge Full	45.22 cfs
Slope Full	0.003000 ft/ft
Flow Type	Subcritical

NOTE: Existing 39" RCP Knoll-Strong Storm Drain Line (D-187). Pipe was run full per information provided in plan. 46 cfs will be used at discharge point for existing and proposed condition.

HYDROLOGIC SOILS GROUP MAP  
FOR  
RIVERSIDE-EAST

RUNOFF INDEX NUMBERS OF HYDROLOGIC SOIL-COVER COMPLEXES FOR PERVIOUS AREAS-AMC II

Cover Type (3)	Quality of Cover (2)	Soil Group			
		A	B	C	D
<u>NATURAL COVERS -</u>					
Barren (Rockland, eroded and graded land)		78	86	91	93
Chaparral, Broadleaf (Manzanita, ceanothus and scrub oak)	Poor	53	70	80	85
	Fair	40	63	75	81
	Good	31	57	71	78
Chaparral, Narrowleaf (Chamise and redshank)	Poor	71	82	88	91
	Fair	55	72	81	86
Grass, Annual or Perennial	Poor	67	78	86	89
	Fair	50	69	79	84
	Good	38	61	74	80
Meadows or Cienegas (Areas with seasonally high water table, principal vegetation is sod forming grass)	Poor	63	77	85	88
	Fair	51	70	80	84
	Good	30	58	72	78
Open Brush (Soft wood shrubs - buckwheat, sage, etc.)	Poor	62	76	84	88
	Fair	46	66	77	83
	Good	41	63	75	81
Woodland (Coniferous or broadleaf trees predominate, Canopy density is at least 50 percent)	Poor	45	66	77	83
	Fair	36	60	73	79
	Good	28	55	70	77
Woodland, Grass (Coniferous or broadleaf trees with canopy density from 20 to 50 percent)	Poor	57	73	82	86
	Fair	44	65	77	82
	Good	33	58	72	79
<u>URBAN COVERS -</u>					
Residential or Commercial Landscaping (Lawn, shrubs, etc.)	Good	32	56	69	75
Turf (Irrigated and mowed grass)	Poor	58	74	83	87
	Fair	44	65	77	82
	Good	33	58	72	79
<u>AGRICULTURAL COVERS -</u>					
Fallow (Land plowed but not tilled or seeded)		76	85	90	92

HYDROLOGY MANUAL

**RUNOFF INDEX NUMBERS  
FOR  
PERVIOUS AREA**

ACTUAL IMPERVIOUS COVER

Land Use (1)	Range-Percent	Recommended Value For Average Conditions-Percent (2)
Natural or Agriculture	0 - 10	0
Single Family Residential: (3)		
40,000 S. F. (1 Acre) Lots	10 - 25	20
20,000 S. F. (1/2 Acre) Lots	30 - 45	40
7,200 - 10,000 S. F. Lots	45 - 55	50
Multiple Family Residential:		
Condominiums	45 - 70	65
Apartments	65 - 90	80
Mobile Home Park	60 - 85	75
Commercial, Downtown Business or Industrial	80 - 100	90

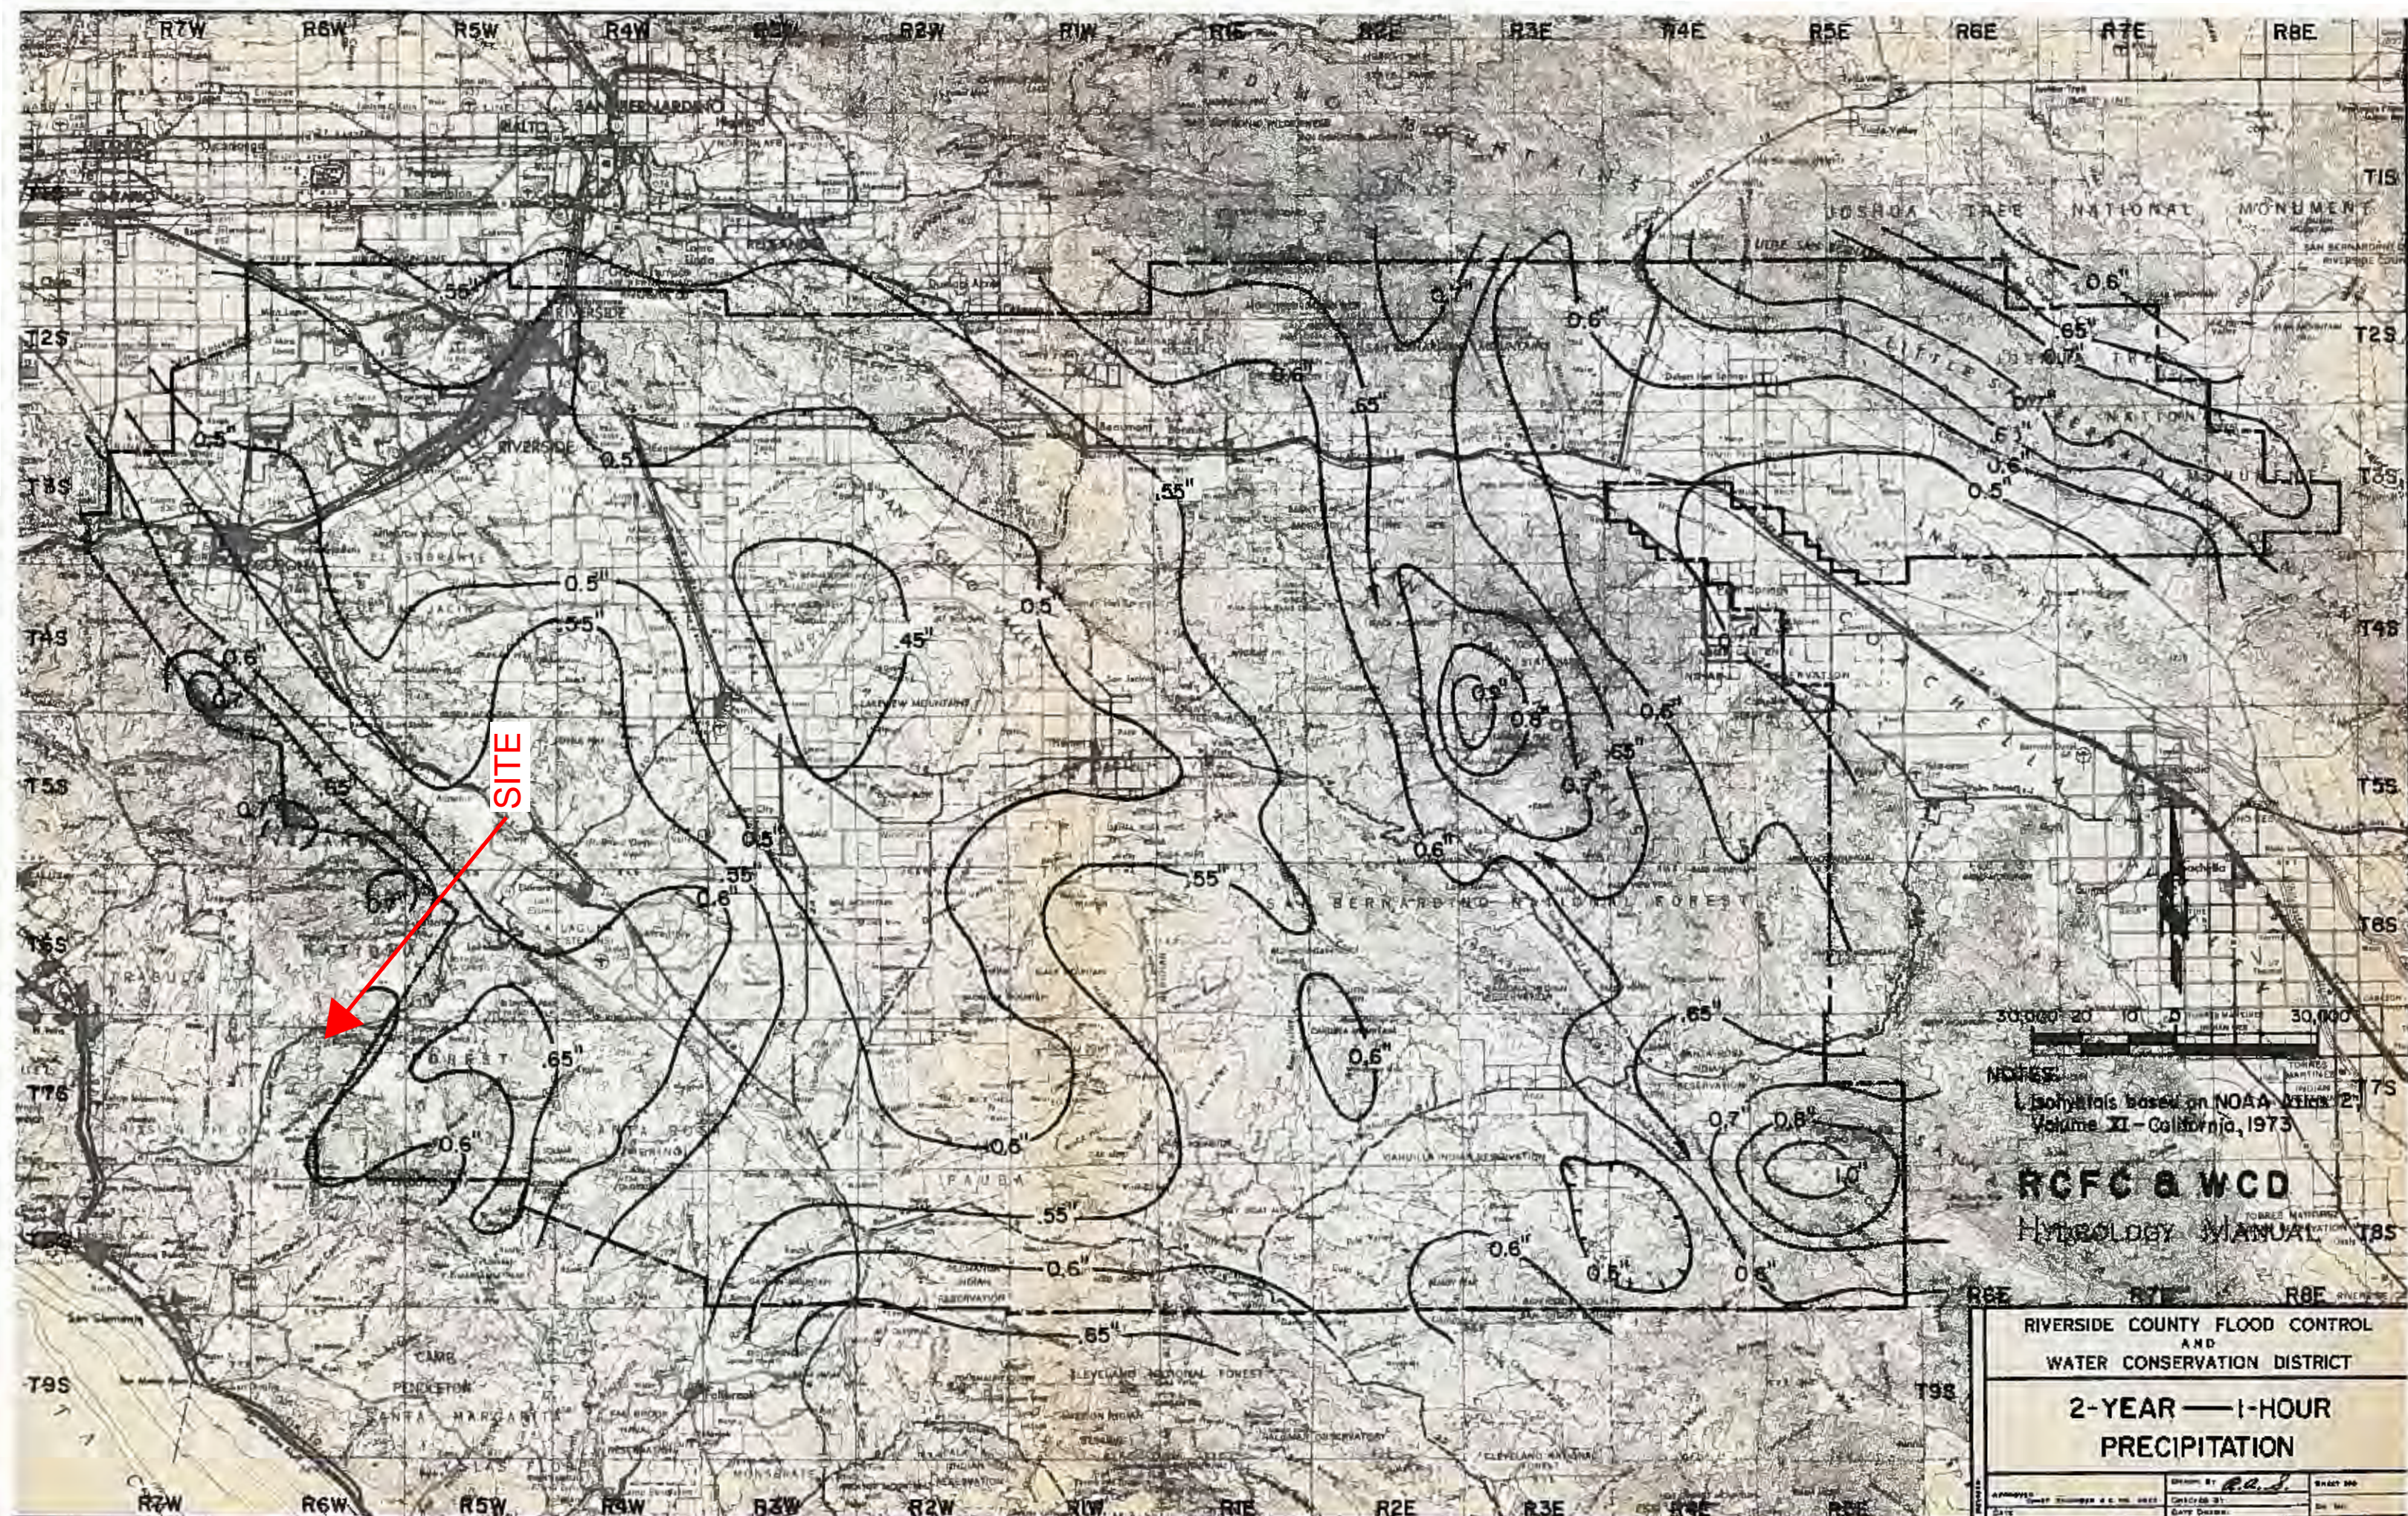

**Notes:**

1. Land use should be based on ultimate development of the watershed. Long range master plans for the County and incorporated cities should be reviewed to insure reasonable land use assumptions.
2. Recommended values are based on average conditions which may not apply to a particular study area. The percentage impervious may vary greatly even on comparable sized lots due to differences in dwelling size, improvements, etc. Landscape practices should also be considered as it is common in some areas to use ornamental gravels underlain by impervious plastic materials in place of lawns and shrubs. A field investigation of a study area should always be made, and a review of aerial photos, where available may assist in estimating the percentage of impervious cover in developed areas.
3. For typical horse ranch subdivisions increase impervious area 5 percent over the values recommended in the table above.
