**Re: Phase I Environmental Site Assessment of the Property at 3596 Van Buren Boulevard,
Riverside, CA 92503**

Dear Mr. Sadeghian:

Athanor Environmental Services, Inc. is pleased to submit this report on our Phase I Environmental Site Assessment of the property at 3596 Van Buren Boulevard, Riverside, CA 92503. The report includes a discussion of our inspection of the site and surrounding properties, a discussion of the environmental setting, a history of the site, a review of records obtained from relevant regulatory agencies, and a search of all known hazardous waste sites within a one mile radius. It also includes site photographs.

If you have any questions, please don't hesitate to contact me.

Sincerely,

George A. Johnson
President
Environmental Professional

1.0 INTRODUCTION

1.1 Scope of Work and Purpose

Athamor Environmental Services (Athamor) was contracted by Mr. Mike Sadeghian to perform this Phase I Environmental Site Assessment (ESA) of the property located at 3596 Van Buren Boulevard, Riverside, CA 92503 (the "Site").

The purpose of the Phase I ESA is to identify recognized environmental conditions associated with the historical use of the property, the physical condition of the property, and present operational practices. *The Standard Practice for Site Assessments: Phase I Environmental Site Assessment Process* (E 1527-13), as issued by the American Society for Testing and Materials (ASTM), defines recognized environmental conditions as follows:

“The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property (ASTM E-1527).”

This Phase I ESA was conducted in accordance with ASTM E-1527-13 Phase I Environmental Site Assessment Requirements. A Phase I ESA consists of four general elements: (1) a records review, (2) a site reconnaissance, (3) interviews, and (4) a report. The first three elements are conducted to identify recognized environmental conditions related to the subject property. The Phase I ESA report provides the evaluation and results of the other three elements.

1.2 Limitations and Exceptions of the Assessment

ASTM E-1527-13 acknowledges that “...no environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property.” The ESA “...is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and ...recognize reasonable limits of time and cost.” The ASTM E-1527-13 goes on to report: “[t]here is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions.”

Athanor has performed this Phase I ESA in conformance with the scope and limitations of ASTM E-1527-13. No exceptions to, or deletions from, this protocol were required, except that aerial photography was not readily available for every five-year period back to a time when the property was undeveloped.

1.3 Limiting Conditions and Methodology Used

This assessment was completed by the following Athanor environmental professional in conjunction with client representatives:

George Johnson, President, Environmental Professional

Anne Marie Johnson, Vice President, Environmental Professional

Marcus Peterson, Associate, Environmental Professional

Mr. Johnson, Ms. Johnson, and Mr. Peterson are all qualified Environmental Professionals. The United States Environmental Protection Agency (EPA) definition of an Environmental Professional qualified to conduct “all appropriate inquiries,” the process of evaluating a property’s environmental conditions and assessing potential liability for any contamination, is guided by the 2002 Brownfields

Amendments to CERCLA which require EPA to develop regulations establishing standards and practices for conducting all appropriate inquiries. The final rule was effective on November 1, 2006—one year after its publication date in the Federal Register. Until November 1, 2006, both the standards and practices included in the final regulation and the current interim standard established by Congress for all appropriate inquiries (ASTM E1527-00) will satisfy the statutory requirements for the conduct of all appropriate inquiries.

To ensure the quality of all appropriate inquiries, the final rule includes specific educational and experience requirements for an environmental professional. The definition applies only to persons conducting all appropriate inquiries for the specific purposes outlined in the final rule. The final rule defines an environmental professional as someone who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to a property, sufficient to meet the objectives and performance factors of the rule. At a minimum, an environmental professional must have ten years of relevant full-time work experience. For the purposes of qualifying as an environmental professional, “relevant experience” means participation in the performance of environmental site assessments that may include environmental analyses, investigations, and remediation which involve the understanding of surface and subsurface environmental conditions and the processes used to evaluate these conditions and for which professional judgment was used to develop opinions regarding conditions indicative of releases of hazardous substances.

This assessment report contains the results of a reconnaissance of the subject property and surrounding properties conducted on September 16, 2022; a review of property, government, and historical records; an interview with Mr. Mike Sadeghian. No one was available for interviewing from the surrounding properties. A report check list is included in Appendix E.

1.4 Report Organization

The report consists of the following sections:

- Section 1, Introduction, provides the basis for the report.
- Section 2, Site Characteristics, describes the property features and layout; the current and historical uses of the subject property and the current uses of the surrounding area.
- Section 3, Environmental Setting, describes the natural characteristics of the site including soils, surface water, and groundwater.
- Section 4, Results of Investigation, includes information based on observations made during the property inspection and information obtained from interviews with knowledgeable personnel; provides historical information obtained from maps, aerial photographs, and building permit records; and presents a literature search of information regarding the subject property. This section includes the environmental database search and publicly available and practically reviewable information obtained from local regulatory agencies.
- Section 5, Conclusions, summarizes the findings and presents any recognized environmental conditions.
- Section 6, Recommendations, provides recommendations for further action, if appropriate.
- Section 7, Limitations.
- Section 8, Reliance on report.

- Section 9, References, presents a list of the materials used or obtained during the conduct of the ESA.
- Section 10, lists the qualifications of personnel.

The appendices include documents used to complete the Phase I ESA:

- Appendix A contains figures and maps of the Site.
- Appendix B selected photographs taken during the site visit.
- Appendix C contains the environmental database search.
- Appendix D contains the user questionnaire.
- Appendix E contains the report check list.

- Section 9, References, presents a list of the materials used or obtained during the conduct of the ESA.
- Section 10, lists the qualifications of personnel.

The appendices include documents used to complete the Phase I ESA:

- Appendix A contains figures and maps of the Site.
- Appendix B selected photographs taken during the site visit.
- Appendix C contains the environmental database search.
- Appendix D contains the user questionnaire.
- Appendix E contains the report check list.
- Appendix F contains the FINDS report.

2.0 GENERAL SITE CHARACTERISTICS

2.1 Location

The Site is located at 3596 Van Buren Boulevard, Riverside, CA 92503. Figure 1 in Appendix A shows the location of the Site on a vicinity map. The Site is located on the southwest corner of Van Buren Boulevard and Primrose Drive. It is northwest of the 91 Freeway. The Riverside Assessor's parcel number is 234-150-039.

2.2 Site Description and Use

The Site consists of an approximately 14,400 square foot parcel with an auto repair building and parking (Photographs 1-3). A layout of the Site is included in Appendix A as Figure 2. Photographs are included in Appendix B.

The Site was previously a gas station and is currently an auto repair shop (Photo 4). It is currently occupied by Discount Auto and Tire Service. The Site is currently owned by Ms. Sarah Alessio.

2.3 Adjacent and Surrounding Properties

The Site is located in a commercial/residential area of Riverside. A map of surrounding properties is included in Appendix A as Figure 2. Located to the northeast across Van Buren Boulevard is Van Buren Piazza (Photos 5). New York Style Pizza is located to the southeast (Photo 6). Located to the southwest is a vacant lot. Located to the northwest across Primrose Drive is U Hall Company (Photo 7).

3.0 ENVIRONMENTAL SETTING

3.1 Regional Physiographic and Geologic Conditions

The subject Site and vicinity are located in the northeast portion of the Arlington Valley within the Transverse Ranges geomorphic province. The broad Arlington Valley is bounded by the Jurupa Mountains on the north, the Box Springs Mountains on the southeast, Arlington Mountain on the south, the Santa Ana Mountains to the southwest, and the La Sierra Hills and Mount Rubidoux on the northwest. The Site is situated at an approximate elevation of 800 feet above mean sea level on terrain that slopes gently downward to the northwest toward the Santa Ana River (USGS, 1980).

The Arlington Valley is underlain by several thousands of feet of alluvium and associated deposits of Recent or Pleistocene age. The surficial unit underlying the site is “younger” alluvial fan material of Quaternary age (California Division of Mines and Geology, 1969). These sediments consist of unconsolidated, poorly stratified to well-stratified clay, silt, sand, and gravel on streambed deposits and alluvial fans. The immediately underlying subsoils were deposited by alluvial processes during the past 11,000 years (Holocene Epoch) and originate in the hills surrounding the site area.

3.2 Soil Conditions

Soils in the area of the subject property are mapped as Hanford coarse sandy loam (USDA, 1978). Soils of the Hanford series formed on alluvial fans in alluvium derived from granite. The Hanford coarse sandy loam is characterized as well drained and moderately rapidly to rapidly permeable. In a typical profile, a coarse sandy loam surface layer about 8 inches thick is underlain by fine sandy loam to a depth of 40 inches. The substratum is stratified loamy sand to coarse sandy loam to a depth of 60 inches or more. A topographical map is included in Appendix A as Figure 4.

3.3 Groundwater Conditions

The subject site is located west-centrally within the Upper Santa Ana Valley Groundwater Basin, Riverside-Arlington Sub-basin (California Department of Water Resources, 2003). This sub-basin is bound by impermeable rocks of Box Springs Mountains on the southeast, Arlington Mountain on the south, La Sierra Heights and Mount Rubidoux on the northwest, and the Jurupa Mountains on the north. The northeast boundary is formed by the Rialto-Colton fault, and a portion of the northern boundary is a groundwater divide beneath the city of Bloomington. The Santa Ana River flows over the northern portion of the sub-basin.

The water-bearing materials are dominantly composed of Quaternary age alluvial deposits consisting of sand, gravel, silt, and clay deposited by the Santa Ana River and its tributaries. Near the City of Riverside, the upper 50 feet of deposits are principally clay; however, deposits near the City of Arlington have considerable sand and little clay. The Riverside-Arlington Sub-basin is replenished by infiltration from Santa Ana River flow, underflow past the Rialto-Colton fault, intermittent underflow from the Chino Sub-basin, return irrigation flow, and deep percolation of precipitation.

Groundwater moves northwest near Arlington, then flows southwest to Arlington Gap, through which it flows into the Temescal Sub-basin. Site-specific groundwater data is not available. According to groundwater elevation data from 1997 (Wildermuth Environmental, 2000), the depth to groundwater was approximately 40 feet below ground surface in the vicinity of the Site, and the direction of the groundwater gradient was to the west-northwest.

4.0 RESULTS OF INVESTIGATION

4.1 Site Inspection

On September 16, 2022 George A. Johnson and Anne Marie Johnson, Athanor Environmental Services, conducted an inspection of the Site. They were accompanied on the inspection by Mr. Mike Sadeghian. Photographs taken by the Consultant during the Site inspection are included in Appendix B.

The Site consists of an approximately 14,400 square foot parcel with an auto repair building and parking. The Site was previously a gas station and an auto repair shop. It is currently occupied by Discount Auto and Tire Service.

Hazardous Materials

Hazardous materials observed onsite include auto repair chemicals. There is a compressor located in an enclosure in the southwest corner of the building (Photo 9).

Underground Storage Tanks (USTs)

No USTs were observed on the Site. USTs are known to have been installed or operated on the premises in past years. A Richfield Station service station operated onsite from 1960 to 1979. Previously the property trustee searched for documentation of UST removal. None was ever found. The Environmental Data Resources' Regulatory Records Search also found no mention of USTs on the Site. A geophysical survey with magnetics was conducted by Athanor. No UST was detected. This is discussed in more detail in Section 4.5.

A former in-ground lift is located beneath an above ground lift (P10). An in-ground lift is located behind the building.

Aboveground Storage Tank (ASTs)

No ASTs were observed on the Site. No ASTs are known to have been installed or operated on the premises in past years.

Waste Generation, Storage, and Disposal

No evidence was found to indicate that hazardous wastes were disposed of on the subject property.

Water and Wastewater

Water is available from the City of Riverside. Sewer service is available from the City of Riverside. No process or industrial wastewater is generated and an industrial discharge permit is not required.

Air Emissions

No sources of air emissions were observed onsite.

Asbestos-Containing Materials (ACM)

No ACMs were observed.

Polychlorinated Biphenyls (PCBs)

Electricity is available from Southern California Edison. No transformers or other potential sources of PCBs were observed on the Site.

Radon

A radon survey was not conducted at the Site. Radon occurs naturally and randomly in geographic settings. The California Department of Health Services (CDHS) conducted a statewide radon survey during 1990-1991 which entailed testing for radon in homes in designated geographic areas. According to this survey, radon devices were placed in homes throughout the county. Radon concentrations detected in Los Angeles County averaged approximately 0.5 picoCuries per liter. The Environmental Protection Agency (EPA) safety standard for radon gas in residences is 4.0 picoCuries per liter and the United States National Council on Radiation Protection and Measurements (NCRP) standard is 8.0 picoCuries per liter.

Based on this study, radon gas is not considered a concern for the Site at this time.

4.2 Regulatory Agency List Review

Athanor Environmental Services retained Environmental Data Resources, Inc. of Connecticut, to provide a comprehensive list of sites within the Site vicinity that are currently under review, management, or notification by a regulatory agency (Appendix C).

The following regulatory agency lists were reviewed:

- Riverside County Department of Environmental Health
- Riverside City Fire Department
- California Regional Water Quality Control Board, Santa Ana Region
- South Coast Air Quality Management District
- California Department of Toxic Substances Control

FEDERAL DATABASES

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

A listing of facilities which represent environmental concerns from the discharge of hazardous materials by hazardous waste generators, treatment and storage facilities, and hazardous waste disposal facilities. The listing includes facilities subject to investigation under the state superfund program and federal Comprehensive Environmental Response Compensation and Liability Act (CERCLA) programs.

Not on the CERCLA list. No CERCLA sites were identified on this list within a one-eighth mile radius of the Site.

No Further Remedial Action Planned sites (NFRAP)

A listing which contains information pertaining to sites which have been removed from the federal EPA's CERCLIS database. NFRAP sites may be sites where following an initial investigation no contamination was found, contamination was removed quickly without need for the site to be placed

on the NPL, or the contamination was not serious enough to require federal superfund action or NPL consideration.

Not on the NFRAP list. No NFRAP sites were identified on this list within a one-eighth mile radius of the Site.

The Environmental Protection Agency (EPA), National Priority List (NPL)

A listing of hazardous waste generators which are, or proposed to be, EPA-enforced Superfund sites.

Not on the NPL list. No NPL sites were identified on this list within a one-eighth mile radius of the Site.

Emergency Response Notification System (ERNS)

A national computer database system that is used to store information on the sudden and/or accidental release of hazardous substances, including petroleum into the environment.

Not on the ERNS list. No ERNS sites were identified within a one-eighth mile radius of the Site.

Resource Conservation and Recovery Information System (RCRIS)

A list developed and maintained by the EPA that identifies hazardous waste generators and hazardous waste treatment and disposal (TSD) facilities. The purpose of this listing is to summarize registration of Hazardous Waste Generators and does not imply that contamination has occurred on the property, but does identify potential sources of contamination.

Not on the RCRIS list. No RCRIS sites were identified within a one-eighth mile radius of the Site.

Resource Conservation and Recovery Information System No Longer Regulated (RCRIS-NLR)

A list developed and maintained by the EPA that identifies hazardous waste generators and hazardous waste treatment and disposal (TSD) facilities that are no longer regulated.

Three RCRIS-NLR facilities were identified on this list within a one-eighth mile radius of the Site: AT&T Mobility, 3600 Van Buren Boulevard, Riverside, CA 92503; Klemm Cycle Supply, 3600 Van Buren Boulevard, Riverside, CA 92503; Van Buren Arco AM/PM, 35058 Van Buren Boulevard, Riverside, CA 92503. None of these sites poses any threat to the Site.

Facility Index System (FINDS)

A USEPA central inventory of facilities monitored by the EPA.

One FINDS site is identified within a one-eighth mile radius: Discount Auto & Tire Service, 3596 Van Buren Boulevard, Riverside, CA 92503; this is the Site. This is discussed in more detail in Appendix F.

STATE DATABASES

The CalSites Database (SCL) (SPL)

The state equivalent of the CERCLIS list. This is a list of properties formerly contained in lists maintained by the Abandoned Sites Program Information System (ASPIS), the Annual Workplan,

and the Bond Expenditure Plan. These properties represent both potential and verified contaminated properties. Names may remain on this list even though a determination has been made that no leak had occurred and no further action is required to protect the environment or public health.

Not on the CalSites list. No sites were identified on the CalSites list within a one-eighth mile radius of the Site.

ENVIROSTOR List

A listing of all sites listed by DTSC.

Not on the ENVIROSTOR list. No ENVIROSTOR site is identified within a one-eighth mile radius.

Cortese

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies, and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites.

Not on the Cortese list. No Cortese site is identified within a one-eighth mile radius.

Solid Waste Information System/Landfills (SWLF)

The California Integrated Waste Management Board maintains an inventory of both open, as well as, closed and inactive solid waste disposal facilities and transfer stations pursuant to the Solid Waste Management and Resource Recovery Act of 1972.

Not on the SWLF list. No SWLF site was identified on the list within a one-eighth mile radius of the Site.

Regional Water Quality Control Board Leaking Underground Storage Tanks (LUST) list

This is a list which compiles the State Water Resources Control Board (SWRCB) and Regional Water Quality Control Board (RWQCB) identified sites that have had unauthorized releases from underground storage tanks (USTs) and non-tank spills.

Not on the LUST list. No LUST site was identified on the list within a one-eighth mile radius of the Site.

California Underground Storage Tank (UST) List

A comprehensive listing of all registered underground storage tanks located within the State of California.

Three UST sites were identified within a one-eighth mile radius: U-Haul Van Buren, 3600 Van Buren Boulevard, Riverside, CA 92503; Riverside City Fire Station #2, 9449 St. Andrews Street, Riverside, CA 92503; Van Buren Arco AM/PM, 3505 Van Buren Boulevard, Riverside, CA 9250. None of these sites poses any threat to the Site.

Hazardous Waste Manifest (HW Manifest) List

A list of all California Department of Toxic Substances Control (DTSC) hazardous waste manifest sites.

Thirteen HW Manifest sites are identified within a one-eighth mile radius: Discount Auto & Tire Service, 3596 Van Buren Boulevard, Riverside, CA 92503; this is the Site; Winston Tire Company #133, 3596 Van Buren Boulevard, Riverside, CA 92503; this is the Site; City of Rierside-Building & Safety, 3595 Van Buren Boulevard, Riverside, CA 92503; U-Haul Company, 3600 Van Buren Boulevard, Riverside, CA 92503; AT&T Mobility, Riverside South Overlay, 3600 Van Buren Boulevard, Riverside, CA 92503; Bronlio Lopez, 9550 Primrose Drive, Riverside, CA 92503; City of Riverside Fire Station 2, 9449 Andrew Street, Riverside, CA 92503; Klemm Cycle Supply 3636 Van Buren Boulevard, Riverside, CA 92503; Karen McFadden, 3608 Roosevelt Street, Riverside, CA 92503; City of Riverside, 3641 Van Buren Boulevard, Riverside, CA 92503; Anita Husted, 3505 Van Buren Boulevard, Riverside, CA 92503; Vaccher Properties, 3510 Van Buren Boulevard, Riverside, CA 92503; Wayne's Engine Rebuilders Inc., 3666 Van Buren Boulevard, Riverside, CA 92503. None of these sites poses a threat to the Site.

LOCAL REGULATORY AGENCY

Riverside City Fire Department

The lead agency for the enforcement of underground storage tank and hazardous materials management regulations in the City of Riverside.

Two UST sites were identified within a one-eighth mile radius: Unocal #1506, 9624 Magnolia Avenue, Riverside, CA 92503; Arlington Automotive, 9611 Magnolia Avenue, Riverside, CA 92503. Neither of these sites poses any threat to the Site.

4.3 Site History/Land Use Review

Interview(s)

An interview was conducted with Mr. Mike Sadeghian, September 16, 2022.

Historical Aerial Photographs

Historical Aerial Photographs of the Site and Site vicinity were reviewed in order to ascertain historical land use and to identify evidence of hazardous material generation or storage.

A review of historical aerial photographs of the subject property determined the following information:

<u>Date</u>	<u>Description</u>
1931	The Site is a vacant rural residential or agricultural parcel fronting on Van Buren Boulevard on the northeast side and Primrose Drive on the northwest side. A small structure is situated near the south corner of the Site. Trees occupy most of the remainder of the Site.
1938	The Site appears unchanged from 1931.
1948-1953	The Site appears unchanged from 1938.
1967	The Site is redeveloped with the existing commercial building, an apparent gas station situated centrally on the northeast quadrant of the property with the canopy on the northeast side fronting on Van Buren Boulevard. The southwest half appears to

be paved, with paved access from Primrose Drive on the northwest side and Van Buren Boulevard on the northeast side.

1974 The Site appears unchanged from 1967.

1985-1994 The Site appears unchanged from 1974.

2002-2012 The Site appears unchanged from 1994.

2016-2020 The Site appears unchanged from 2012 and appears as it does today.

Historic Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps provide information on commercial and industrial properties, based on risk data gathered for the fire insurance companies. The maps show the number of buildings located on the property, and the type of construction. The maps also describe the various businesses located nearby, and show the locations of tanks, boilers, and other potential hazards.

Sanborn Insurance Map coverage dated 1908, 1950, 1952-1955, 1957-1962, 1965 and 1968-1969 was identified by EDR (2022). However, the subject Site and immediately adjacent properties lay outside the boundaries of coverage on each of these maps.

Historical Aerial Photographs of the Surrounding Properties

A review of historical aerial photographs of the surrounding property determined the following information:

<u>Date</u>	<u>Description</u>
1931	Van Buren Boulevard is in place adjacent to the northeast side of the Site. Primrose Drive is along the northwest side. Orchards occupy the areas adjacent to the southeast and southwest. An apparent single-family residence occupies the property across Andrew Street to the northwest of the Site. An apparent rural residence is in place among orchards across Van Buren Boulevard to the northeast of the Site. Orchards extend farther to the north, east and south, while rural residences predominate in the areas farther northwest and southwest of the Site.
1938	The adjacent and nearby properties appear unchanged from 1931.
1948	The Site vicinity appears generally unchanged from 1938.
1953	New single-family residences occupy the area immediately southwest of the Site. Orchards are removed from the property across Van Buren Boulevard to the northeast of the Site.
1967	Orchards are removed from the adjacent and nearby parcels. The existing commercial building is in place adjacent to the southeast of the Site, followed by another existing commercial structure. A vacant lot is adjacent to the southwest. A former small commercial structure and apparent gas station occupy the parcels across Van Buren Boulevard to the northeast of the Site. New commercial businesses are in place farther to the southeast, followed by the Riverside Freeway (State Route 91).
1974	The former residence is removed from the parcel northwest of the Site across Primrose Drive. The parcel appears to be paved and used for parking. Existing

commercial buildings are in place farther northwest along Van Buren Boulevard. The adjacent and nearby properties otherwise appear unchanged from 1967.

1985 The Site vicinity appears unchanged from 1974.

1990-2006 The Site vicinity appears unchanged from 1985.

2009 Primrose Drive is extended to the northeast from the intersection with Van Buren Boulevard. The existing commercial building occupies the property across the street to the northwest of the Site. The Site vicinity otherwise appears unchanged from 2006.

2012 The adjacent and nearby properties appear unchanged from 2009.

2016-2022 The adjacent and nearby properties appear unchanged from 2012 and appear as they do today.

4.4 Vapor Encroachment Screening for Target Property

Following is a Vapor Encroachment Screening (VES) for the Target Property (TP), the Site, in accordance with ASTM Designation 2600 for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The purpose of a Tier I VES for a TP under E1527-13 Phase I ESA guidelines is to determine whether a potential Vapor Encroachment Condition (VEC) exists. VES screening includes:

- Vapor Encroachment Condition (VEC) caused by the presence of Chemicals of Concern (COC): gasoline from an underground storage tank.

- Existing/planned use of the TP: auto repair.
- Existing/planned structure: auto repair.
- Surrounding area: commercial.
- Historical records related to prior use of TP and surrounding properties: orchards, residences, and commercial.
- Environmental setting information: Hanford coarse sandy loam which are formed on alluvial fans in alluvium derived from granite. The Hanford coarse sandy loam is characterized as well drained and moderately rapidly to rapidly permeable. In a typical profile, a coarse sandy loam surface layer about 8 inches thick is underlain by fine sandy loam to a depth of 40 inches. The substratum is stratified loamy sand to coarse sandy loam to a depth of 60 inches or more. Groundwater is approximately 40 feet below ground surface in the vicinity of the Site and the direction of the groundwater gradient was to the west-northwest.
- Significant natural or man-made conduits that can serve as preferential paths for VEC, such as utility corridors, sewers, storm drains, Karst terrain (dissolution of a layers or layers of soluble bedrock): none identified.
- Government records review: no site identified with a one-eighth mile radius that would pose a threat to the Site, including upgradient contaminated properties.

Consequently, a Tier II VES, such as more invasive measures, including a soil vapor investigation and indoor air sampling and laboratory analysis, is warranted for the Site. A soil vapor investigation was conducted. This is discussed in more detail in Section 4.5.

4.5 Previous Environmental Investigations

On September 16, 2022, Athanor conducted a geophysical survey of portion of the subject site to search for and locate any underground storage tanks (USTs). The areas of interest included the entire site outside the auto shop building. The vertical gradient magnetics method was employed to delineate areas where large buried objects, representative of USTs, could be buried.

The geophysical survey did not detect a positive-negative anomaly, the magnetic signature of a UST. Therefore, the USTs have been removed. Magnetics data indicated the presence of product line piping from a concrete cutout, the apparent location of USTs, to a former fuel pump island with a canopy in front of the auto repair shop. This piping (three separate parallel piping runs) was painted on the ground from the apparent UST cutout to the former fuel dispenser island.

On September 23, 2022 Athanor conducted a soil vapor investigation of the site to examine the property for aromatic and chlorinated hydrocarbon volatile organic, compounds (VOCs) from UST operation. Six soil borings were located onsite and five soil vapor probes were installed at depths of five feet below grade surface (bgs) at regular intervals at the presumed UST cutout, along the product lines, and at the other side (west) of the former pump island, Soil Vapor Probes SV-1 through SV6. An apparent water line break was observed near Soil Vapor Probe SV-5, which had to be moved and resampled in order to avoid water contact. Soil vapor samples were collected and delivered to an onsite mobile laboratory for analysis.

On September 23, 2022, Athanor conducted a subsurface soil investigation. Two soil borings, Boring A and Boring B were located onsite. Boring A was located next to the in-ground hydraulic lift located outside. Boring B was located next to the former in-ground hydraulic lift in the auto shop (where an above ground lift is now located). Each boring was advanced to a depth of 12 feet bgs, with soil samples collected at depths of 10 and 12 feet bgs from each boring.

All soil vapor samples collected were analyzed by an onsite mobile state-certified analytical laboratory by EPA Method 8260B for VOCs. Concentrations of VOCs detected were as follows, in micrograms per cubic meter ($\mu\text{g}/\text{m}^3$):

<u>Compound</u>	<u>Soil Vapor Sample</u>					
	<u>SV-1</u>	<u>SV-2</u>	<u>SV-3</u>	<u>SV-4</u>	<u>SV-5</u>	<u>SV-6</u>
1,2,4-Trimethylbenzene	34	N.D.*	54	120	N.D.	N.D.
Benzene	140	110	N.D.	96	110	N.D.
Chloroform	N.D.	N.D.	N.D.	N.D.	44	N.D.
Ethylbenzene	56	N.D.	N.D.	84	N.D.	N.D.
m,p-Xylenes	160	48	82	320	52	32
o-Xylene	40	N.D.	N.D.	92	N.D.	N.D.
Perchloroethylene	84	40	530	220	N.D.	N.D.
Toluene	300	160	94	570	210	86

* Nothing detected.

Both soil samples collected were analyzed by an state-certified analytical laboratory by EPA Method 8015 Modified for total petroleum hydrocarbons (TPH) speciated by carbon chain range. Concentrations of total petroleum hydrocarbons detected by carbon chain range were as follows in milligrams per kilogram (mg/kg) or parts per million (ppm):

<u>Carbon Chain Range</u>	<u>Soil Vapor Sample</u>	
	<u>A-10</u>	<u>B-10</u>
C ₄ -C ₁₂	N.D.	N.D.
C ₁₃ -C ₂₂	N.D.	7.7
C ₂₃ -C ₃₂	N.D.	11
C ₃₃ -C ₄₀	N.D.	6.0

For VOC concentrations in soil or soil vapor, it is necessary to apply California Regional Water Quality Control Board (RWQCB), San Francisco Region (adopted by RWQCB, Santa Ana Region) Tier I Environmental Screening Levels (ESLs), concentrations of hazardous chemicals in soil or soil vapor that are considered to be thresholds of concern for risks to human health. The ESLs are often used by RWQCB and other regulatory agencies to screen sites for potential human health concerns where releases of hazardous chemicals to soil have occurred. ESLs are published. The ESLs are often used by RWQCB and other regulatory agencies to screen sites for potential human health concerns where releases of hazardous chemicals to soil have occurred.

VOCs detected that exceeded their respective ESLs were as follows:

Benzene - up to 140 ug/m³ vs. ESL 3.2 ug/m³.

Chloroform - 44 (ug/m³ (one detection) vs. ESL 4.1 ug/m³, probably from drinking water, near observed water line break.

Ethylbenzene - up to 84 ug/m³ vs. ESL 37 ug/m³.

Perchloroethylene (PCE) - up to 530 ug/m³ vs. ESL 15 ug/m³.

Concentrations of benzene and ethylbenzene detected probably originated from UST and product piping operation. Concentrations of PCE detected probably originated from surficial releases of solvents and/of degreasers.

ESLs are used for subslab VOCs only. Regulators are concerned about vapor intrusion from subslab VOCs into indoor breathable air, which could represent a public health threat. It is not known whether VOCs in soil vapor impact the auto repair shop. It may be necessary to collect and analyze soil vapor samples from beneath the building in order to assess the impacts of benzene, ethylbenzene, and PCE on the building.

No TPH in any carbon chain range detected is significant.

It was recommended that, in order to assess the impacts of benzene, ethylbenzene, and PCE on the auto shop building, either (1) soil vapor samples be collected from beneath the building and analyzed by a laboratory for VOCs or (2) indoor air samples be collected from inside the building and analyzed by a laboratory for VOCs.

No other previous environmental investigations of the Site are known to have been conducted.

5.0 CONCLUSIONS

The Site consists of an approximately 14,400 square foot parcel with an auto repair building and parking. The Site was previously a gas station and an auto repair shop. It is currently occupied by Discount Auto and Tire Service.

Hazardous materials observed onsite include auto repair chemicals

On September 16, 2022, Athanor conducted a geophysical survey of portion of the subject site to search for and locate any USTs). No positive-negative anomaly, the magnetic signature of a UST was detected.

On September 23, 2022 Athanor conducted a soil vapor investigation of the site. Six soil borings were located onsite and five soil vapor probes were installed at depths of five feet bgs On September 23, 2022, Athanor conducted a subsurface soil investigation. Two soil borings were located onsite and advanced to a depth of 12 feet bgs, with soil samples collected at depths of 10 and 12 feet.

All soil vapor samples collected were analyzed by an onsite mobile laboratory by EPA Method 8260B for VOCs. Soil samples collected at depths of 10 feet bgs were analyzed by a laboratory by EPA Method 8015 Modified for total petroleum hydrocarbons (TPH) speciated by carbon chain range. VOCs detected that exceeded their respective Tier 1 environmental Screening Levels (ESLs) were benzene, chloroform, ethylbenzene and perchloroethylene (PCE). Concentrations of benzene and ethylbenzene detected probably originated from UST and product piping operation. Concentrations of PCE detected probably originated from surficial releases of solvents and/of degreasers.

ESLs are used for subslab VOCs only. It may be necessary to collect and analyze soil vapor samples from beneath the building in order to assess the impacts of benzene, ethylbenzene, and PCE on the building.

No TPH in any carbon chain range detected is significant.

It was recommended that either (1) soil vapor samples be collected from beneath the building and analyzed by a laboratory for VOCs or (2) indoor air samples be collected from inside the building and analyzed by a laboratory for VOCs.

No ASTs are known to have been installed or operated on the premises in past years.

No evidence was found to indicate that hazardous wastes were disposed of on the subject property.

No ACMs were observed onsite.

Radon gas is not considered an environmental concern for the Site.

No previous environmental investigations of the Site are known to have been conducted.

Based on the review of state and federal agency listings, none of the adjacent properties on agency lists of contaminated sites poses any threat to the Site.

This assessment has revealed evidence of one Recognized Environmental Condition (REC): soil vapor and soil contamination from former UST.

6.0 RECOMMENDATIONS

Further investigation was recommended, with a further soil vapor investigation or indoor air sampling and laboratory analysis.

7.0 LIMITATIONS

The conclusions and recommendations presented above are based upon the agreed upon scope of work outlined in the above report. Consultant makes no warranties or guarantees as to the accuracy or completeness of information obtained from information provided or compiled by others. It is possible that information exists beyond the scope of this investigation. Also, changes in site use may have occurred sometime in the past due to variations in rainfall, temperature, water usage, economic, agricultural or other factors. Additional information, which was not found or available to Consultant at the time of writing Report, may result in a modification of the conclusions and recommendations presented. This report is not a legal opinion.

Use or misuse of this report, or reliance upon the findings hereof by any parties other than Mr. Mike Sadeghian is at their own risk. The Consultant does not make any representation or warranty to such other parties as to the accuracy or completeness of this report or the suitability of its use by such other parties for any purpose whatever, known or unknown to the Consultant. The Consultant shall not have any liability to, or indemnify or hold harmless third parties for any losses incurred by the actual or purported use or misuse of this report.

Athamor Environmental Services does not and cannot represent that the Site does not contain any hazardous substances, contaminants, pollutants, petroleum hydrocarbons, or any other latent conditions beyond that observed by the Consultant during the course of the current Phase I Environmental Site Assessment scope of work. The scope of this evaluation did not include subsurface exploration, soil or water sampling, chemical analysis, or evaluation of geotechnical conditions/hazards. Further assessment of possible adverse environmental impacts from past on-site activities may be accomplished by a more comprehensive assessment.

8.0 RELIANCE

This report may be distributed to and relied upon by Mr. Mike Sadeghian, his successors, and assigns, and Conduit to be named by Mr. Mike Sadeghian, his successors, and assigns with respect to a loan upon the project, together with any rating agency or any issuer or purchaser of any security collateralized or otherwise backed up by such a loan. The independent conclusions represent Athanor's best professional judgment based on the conditions that existed and the information and data available to us during the course of this assignment. Factual information regarding operations, conditions, and test data provided by Mr. Mike Sadeghian have been assumed to be correct and complete.

Athanor has sought to convey the results of this effort to Mr. Mike Sadeghian in a way that is practical, useful, and in accordance with accepted scientific and/or engineering practice and protocols, including ASTM 1527-13.

10.0 QUALIFICATIONS OF PERSONNEL

Following are the qualifications of project personnel:

George A. Johnson

President

Mr. Johnson has over 43 years in environmental, energy, socioeconomic, and land use consulting, including over 36 years in environmental consulting with four firms, two of which he founded. He has designed and managed numerous phase I site assessments, subsurface site investigations, and underground storage tank removal/closures. He has performed well installation/groundwater monitoring, remedial planning and feasibility, and physical site remediation, including all associated technical disciplines. He has provided expert witness testimony. He has managed asbestos surveys, regulatory compliance audits, waste minimization studies, and indoor air quality studies. In addition, he has been responsible for environmental and land use planning for the following project types: ports, marine terminals, pipelines, wastewater treatment plants, power plants, transportation systems, residential, commercial and industrial construction, water and energy policy planning, and military and space. Mr. Johnson holds a B.B.A in Finance and Economics, an M.B.A. in Finance, and an M.S. in Urban Land Economics. He has completed doctoral courses in Urban and Regional Planning.

Marcus A. "Sandy" Peterson

Program Manager

Mr. Peterson is Program Manager and also serves as project manager in several project areas. He has over 20 year experience in environmental consulting, including phase I site assessments, risk assessments, hazardous site remedial investigations and feasibility studies, regulatory compliance audits, waste minimization studies, permit acquisition, and environmental impact assessments. He

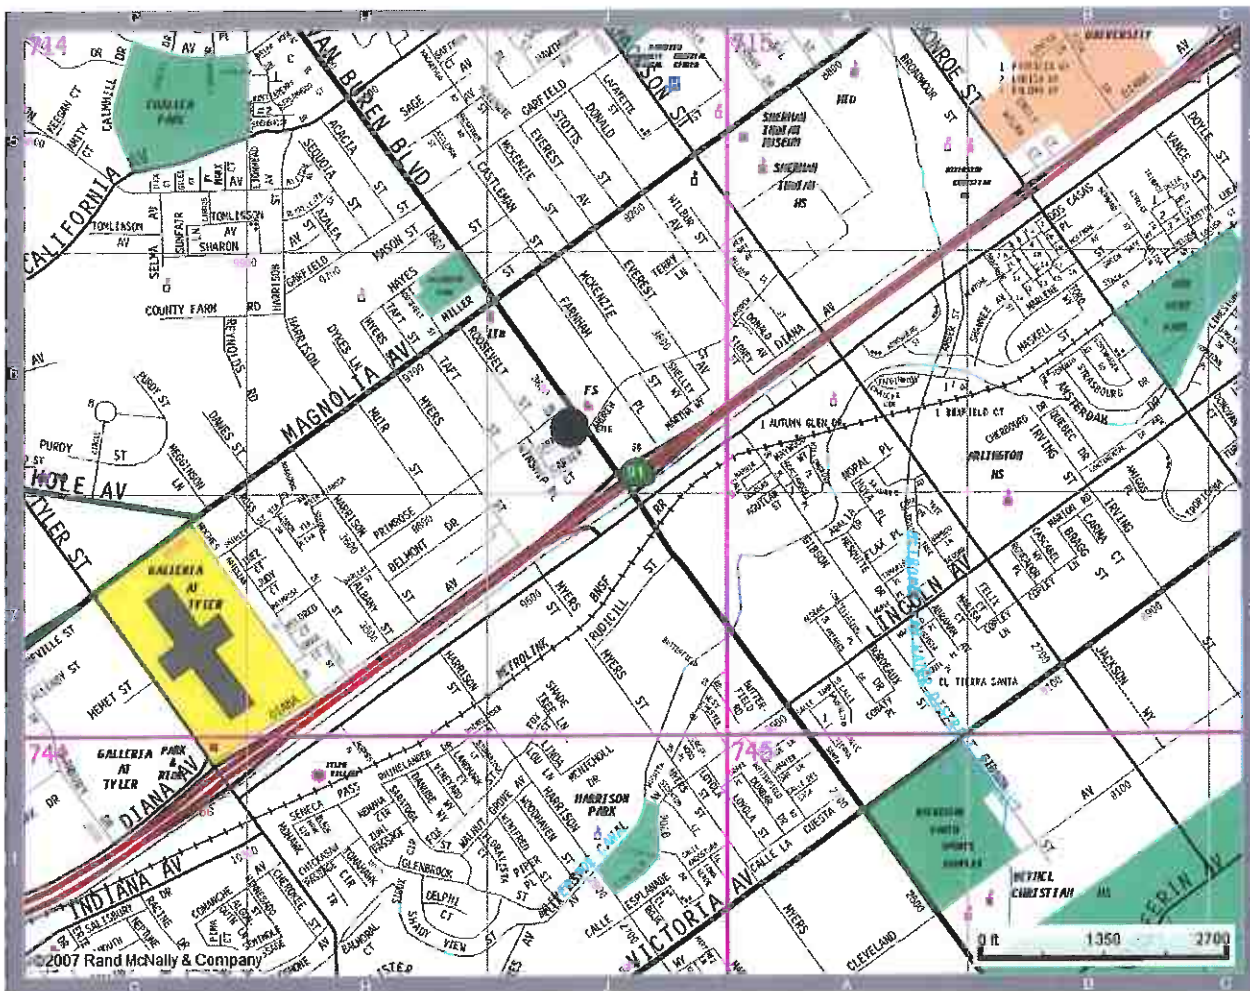

specializes in environmental due diligence studies for real estate transactions, loans, and mergers and acquisitions. Mr. Peterson holds a B.A. in Biology and a M.Sc. in Water Resource Management.

Anne Marie Johnson

Environmental Professional

Ms. Johnson is an expert in computer programs, consulting, and training. Her specialty is in report organization and graphic creation. As the company's computer expert, she is versed in the use of several programs which she uses to create reports that accompany every job. She has participated in numerous phase I site assessments and transaction screens over the last 16 years. Ms. Johnson holds a B.A. in History, a teaching credential, and an M.S. in School Management and Administration, as well as a diploma in Programming and Computer Systems. She has been working with various computer programs since 1981. She is also vice president of finance for the company.

Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: Two pea gravel samples were collected from an approximate depth of 1.5 fbg from a UST manhole excavation under the supervision of RCDEH on December 11, 2007. One sample was collected from the north side and one from the south side of the tank. Concentrations of total lead were detected in the north and south pea gravel samples at 5.5 mg/kg and 13 mg/kg, respectively. On February 20, through March 2, 2009, soil borings B-6 through B-11 were drilled to a total depth of 56.5 to 60 fbg. Results of this assessment indicate that oxygenates MTBE and TBA are present in saturated soil and groundwater beneath the Site. Oxygenate concentrations in groundwater are highest in the vicinity of borings B-10 and B-11, located on the northeastern side of the USTs, and B-9, located south of the USTs. Oxygenate concentrations in soil are highest at or slightly above the groundwater table in the vicinity of borings B-9, B-10 and B-11, located in the south and southeast portions of the site. Impact to vadose zone soils is minimal. Site History- SITE HISTORY / RELEASE INFORMATION: Previous Release - 1995: In July 1995, a leak was discovered in the 87-octane product line. October 1995, the UST system, consisting of two 12,000 gallon fuel USTs, piping, and dispensers, was removed and a new UST system was installed in the western corner of the site. All soil samples under the USTs were non-detect (ND) for all constituents analyzed, however, multiple soil samples collected below the product lines and dispensers detected

hydrocarbon constituents. Concentrations up to 8300 ppm TPHg and 120 ppm benzene were detected below the northwestern dispenser island. Impacted soils near the affected dispenser island and product piping areas were over-excavated to 24 feet below grade (ft bg). Approximately 760 tons hydrocarbon-impacted soil was hauled off-site for recycling. Riverside County Environmental Health (RCDEH) issued a No Further Action letter for this release on April 30, 1996. NEARBY UST CLEANUP SITE: 1998 to Present: A UST cleanup site (Thrifty #341) is located southeast of the former 76 Station (diagonally across the intersection) at 3399 Van Buren Blvd. Depth to groundwater at this site has ranged from approximately 40 feet to the current depth of approximately 60 feet. Groundwater flow direction has been predominantly to the northwest. Soil and groundwater remediation has been conducted at this site. The status of this site is currently pending closure. ASSESSMENT / IDENTIFICATION OF ADDITIONAL RELEASE: September 2007: A due diligence baseline assessment was conducted for a property ownership transfer. Five soil borings (B-1 through B-5) were drilled near the existing USTs and dispensers to a maximum depth of 35 ft bg. One soil sample from 25 ft bg or 35 ft bg from each boring was analyzed by the laboratory. Hydrocarbon constituents were detected in several soil samples. The highest detections were 0.34 ppm TPHg, 2.8 ppb benzene, 2.2 ppb toluene, and 370 ppb methyl tertiary butyl ether (MTBE) all from boring B-2 at 35 ft bg. June 2008: The due diligence assessment report was provided to Local Oversight Program (LOP) staff. The site was subsequently entered into the LOP. February 2009: Six soil borings (B-6 through B-11) were drilled in various locations around the UST system to depths of approximately 55 to 56 ft bg. Laboratory results for all samples collected above 40 ft bg in all borings were at or below the detection limits for all constituents tested. The highest detections were in samples collected between 40 and 50 ft bg (2.8 ppm TPHg (B10-51), ND<10 ppm TPHd, 4.8 ppm MTBE (B9-46) and 3.5 ppm TBA (B11-56)). Groundwater was encountered in the borings at depths of 53 to 55.5 ft bg and groundwater grab samples were collected from each borehole. All groundwater samples were impacted with the highest concentrations in B-9 and B-11 (1800 ppb TPHg (B-11), 14000 ppb MTBE (B-11), and 820 ppb TBA (B-11)). April 2009: The site property was acquired by the City of Riverside by eminent domain and the station ceased operating. November 2009: Two 15,000-gallon gasoline USTs, the piping and four dispensers were removed. A total of 10 soil samples were collected below the UST system. All of the soil samples were ND for all constituents tested (TPH & VOCs). 2012 Present: The site is a currently a vacant landscaped area between the 91 freeway / Indiana Avenue / Van Buren Boulevard. Recent highway improvements have encroached on the property and it is now too small for development.

Future site use will be vacant property adjacent to freeway.
GROUNDWATER MONITORING: Not required at this former 76 station site, however, groundwater has been monitored since 1999 across the intersection at the Thrifty station located southeast (diagonally) of the former 76 station site. The depth to groundwater at the Thrifty site has varied from 40 to 60 ft with a general flow direction to the northwest. Currently, the depth to groundwater at the Thrifty site is approximately 60 ft bg. **REMEDIATION:** Soil or groundwater remediation was not required and has not been conducted at the site. **SOIL AND GROUNDWATER VERIFICATION:** Not required. **COMMENTS / JUSTIFICATION FOR CLOSURE:** Based the lack of shallow soil impacts at this site as seen in the soil borings and sampling conducted below the UST system, as well as the depth to groundwater at the Thrifty cleanup site (ranging from 40 to 60 ft bg), it appears that soil impacts below 40 ft at this site may be associated with impacted groundwater / capillary fringe soils now exposed due to the drop in the water table (previously ~40 ft bg, now ~60 ft bg). Due to the small size of the property and location (between/adjacent to major streets and freeway), groundwater impacts that may exist below this site cannot be accessed for assessment or remediation (width of freeway is ~400 ft wide). Removal of both UST systems and prior excavation of impacted soils have removed potential contaminant sources that may have contributed to groundwater impacts. Further, the closest known water well is greater than 1 mile from the site. 11/1/2013 CASE CLOSED

Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: ***Data prior to 2005 does not appear in GeoTracker. Consult agency file for all site data*** Site History/Release Information: July and August 1997- A baseline subsurface investigation was conducted to assess conditions below the dispensers. Twelve soil samples were collected under the dispensers and six soil borings (TDD-1 through TDD-6) were drilled. Three of the borings (TDD-1, TDD-2 and TDD-6) were completed as groundwater (gw) monitoring wells as gw was encountered at approximately 50 ft bgs. Soil and gw sampling identified soil impacts in TDD-1 and TDD-6 and all six gw samples were impacted. Maximum soil concentrations were: 840 ppm TPHg (dispenser sample DS#9/10), 4.5 ppm benzene (B) (TDD-1@50 ft), and 19 ppm MTBE (dispenser sample DS#21/22). The highest gw concentrations were in TDD1: 43000 ppb TPHg, 8200 ppb B, 5000 ppb T, 670 ppb E, 7600 ppb X, and 2300 ppb MTBE. (Well TDD-6 was paved over in 1999 and was not able to be located) May 1998 - Three underground storage tanks (USTs) were removed and replaced with two double-walled 20,000-gal USTs. Soil samples were collected below the USTs and dispensers and from the stockpiled soil removed from the UST cavity and dispenser areas. Soil samples collected from former UST pit contained concentrations up to 7700 ppm TPHg, 6.5 ppm B, and 71 ppm MTBE. Soil samples collected below the dispensers contained up to 33000 ppm TPHg, 53 ppm B, and 84 ppm MTBE. A total of 415.47 tons of impacted soil was removed during the UST replacement activities. Site was placed into LOP on May 26, 1998. Assessment: February and March 1999 - Five soil borings (TOC-11 through TOC-15) were drilled and four of

SOURCE: CA State Water Resources Control Board

them (TOC-11 through TOC-14) were completed as gw monitoring wells. Soil sample results detected relatively low hydrocarbon concentrations, with the exception of boring TOC-14, near the former UST area, which contained up to 42000 ppm TPHg (TOC-14 at 25 ft), 17 ppm B (TOC-14 at 40 ft), and 35 ppm MTBE (TOC-14 at 25 ft). GW samples had TPHg concentrations ranging from 1000 ppb (TOC-12) to 16000 ppb (TOC-14); benzene ranging from 0.84 ppb (TOC-12) to 1800 ppb (TOC-14); and MTBE concentrations ranging from 880 ppb (TOC-14) to 7800 ppb (TOC-13). January and February 2001 - Two off-site gw monitoring wells (TOC-17 and TOC-18) and one on-site gw monitoring well (TOC-19) were installed. All soil samples were below the detection limits (ND) for TPHg, B, and MTBE. GW from well TOC-18 and TOC-19 were ND for TPHg, B, and MTBE. GW from TOC-17 contained 96 ppb TPHg, ND B, and 8.4 ppb MTBE. October 2001 - Two vapor extraction wells (VW-1s,d and PZ-1) and one gw recovery well (RW-1) were installed. Dual-completed well VW-1 was screened 19.5-49.5 ft bg and 54-85 ft bg. PZ-1 was screened 21-41 ft bg. Maximum soil concentrations were: 22800 ppm TPHg (RW-1 at 30 ft), 95.4 ppm B (RW-1 at 45 ft bgs), and 65.5 ppm MTBE (RW-1 at 30 ft). A thickness of 1.16 ft Free Product (Liquid Phase Hydrocarbons (LPH)) was observed in RW-1. LPH removal using intermittent bailing was initiated. October 2002 Two additional vapor wells (VW-2 and VW-3) and one gw recovery well (RW-2) were installed for planned remediation. LPH Free Product Liquid Phase Hydrocarbons (LPH) / Free Product was observed in the wells as follows: TDD-1: Measureable LPH from 3/2001 to 11/2003 (max. thickness 1.15 ft) RW-1: Measureable LPH from 10/2001 to 1/2003 (max. thickness 1.75 ft) TOC-14: Measureable LPH from 3/2002 to 9/2002 (max. thickness 0.10 ft) Weekly overpurging was conducted on TDD-1 from May 2007 to Nov 2007. RW-1 was added to the weekly overpurging June 2007. LPH total recovered 53.6 gal Remediation May 1998 - Approximately 415 tons of impacted soil was removed during UST system replacement in 1998. The consultant estimated the 415 tons equivalent to removing 953 lbs of hydrocarbons. October 2001 - A 4-hr SVE pilot test was conducted using VW-1, TDD-1, PZ-1 and TOC-14. A total of 29.3 lb hydrocarbon vapors were removed during SVE operations. The SVE radius of influence (ROI) was calculated to be approximately 43 ft test. A gw extraction pilot test was conducted using RW-1 for extraction. Approximately 2250 gallons of gw was removed during the 500 min test and the gw extraction capture zone was calculated to be 76 feet. August 2006 to August 2009 SVE was conducted using wells TDD-1, TDD-2, VW-1, VW-2, VW-3, PZ-1, TOC-11, TOC-12 and TOC-14 for extraction in varying combinations. Approximately 232,352 cu ft of soil volume was treated based on the Radius of Influence (ROI) of 41 feet and screened interval from 15 to 55 ft bgs. Approximately 24,878 lbs of hydrocarbons were removed during the SVE operations. May 2007

to November 2007 GW overpurgung from wells TDD-1 and RW-1 was conducted as an interim remedial measure until the full-time gw remediation system was installed. A total of 4,590 gallons were removed during the overpurgung activities. November 2007 to March 2009 A Groundwater Pump and Treat system (GWPT) was operated on-site using wells RW-1, RW-2, VW-2 and TOC-12 for extraction. Approximately 742,257 gallons of gw was pumped, treated, and discharged to the sewer. Groundwater Monitoring: 1999 to 2013 GW monitoring has been conducted at the site since 1999. The depth to gw was approximately 45 ft bgs in 1999, and has since fluctuated with an overall decrease to the current depth of approximately 60 ft bgs. With the drop in the water table, all of the site wells had gone dry by 2009, however, sampling up to that time showed an overall significant decline in dissolved hydrocarbon concentrations with relatively low to "Non Detect (ND)" concentrations for most constituents. The exception was well TOC-14, where TBA concentrations were highest in early 2007 at 2510 ppb TBA, then decreased to ND in December 2008 after several fluctuations prior to going dry. In September 2010, replacement well TOC-14R was installed downgradient of the former UST cavity between TOC-14 and RW-1. Since installation, TOC-14R has been sampled six times with gw concentrations at or below the detection limits for all constituents tested. Verification: Vapor verification August 2009 - A 5-day rebound test was performed in August 2009. All nine vapor extraction wells (TDD-2, TOC-14, VW -1, VW -3, TOC-11, PZ-1, TDD-1, VW -2, and TOC-12) were evaluated for vapor concentration rebounding. The highest concentrations were detected in well TOC-14 at 8 hours of operation: 209 ppmv TPHg, ND B, 2.1 ppmv T, 8.3 ppmv E, 75 ppmv X and ND MTBE. Vapor samples from all other wells were at or below the detection limits. Soil verification September 2010 Three confirmation borings (CB-1, CB-2, CB-3) were drilled to 50-ft and boring CB-1 was completed as a gw monitoring well (TOC-14R). The well was installed as a replacement well near TOC-14 where elevated gw concentrations were present prior to it going dry. All of the samples from CB2 and CB3 were non-detect for all constituents tested, except for CB3 at 45 & 50 ft (0.122 ppm MTBE and 0.520 ppm MTBE). Samples collected from 35 to 50 ft in CB1(TOC-14R) had detections up to: 1040 ppm TPHg (CB1-40), ND B, 0.067J ppm T, 8.23 ppm E (CB1-40), 144 ppm X (CB1-40), ND MTBE, and ND<8.8 ppm TBA. VOCs were also detected in CB1 from depths of 30 to 50 ft bg with the maximum concentrations of: 533 ppm 1,2,4-TMB, 18.2 ppm n-Butylbenzene, 43.3 ppm n-Propylbenzene, 150 ppm 1,3,5-TMB, 155 ppm Naphthalene, 6.33 sec-Butylbenzene, and 6.84 ppm Isopropylbenzene. Groundwater verification Replacement well TOC-14R, the only well with water, has been sampled six times since installation in 2010. Except for the first sampling event in September 2010, with 284 ppb TPHg, 2.9J ppb E, and 38 ppb X, all gw

samples from well TOC-14R have been non-detect for all constituents tested. Residual Mass in Soil: 350 lb TPHg, <1lb B, 3 lb E, 4 lb X, <1 lb MTBE, <1 lb TBA Subsurface Soil types: Sand with laterally discontinuous interbedded lenses of clayey sand, silt, silty sand, and clayey silt to the total depth of investigation (approx. 82 ft bgs) Site is operating gas station as of June 2014. NOTE: This closure summary does not include all of the data for this cleanup. It was prepared by the Riverside County DEH for the purpose of providing a brief summary of the cleanup case. The RCDEH site file and all environmental documents should be reviewed to obtain further details regarding this cleanup.

Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: The site was formerly operated as a Mobil service station, but is now inactive. The site is situated at the northwest corner of the intersection of Magnolia Avenue and Van Buren Avenue in a commercial area of the City of Riverside, California. Arlington Park and small retail businesses are located in the immediate vicinity of the site. On February 2006, one 10,000-gallon double-walled gasoline UST, two 8,000-gallon double-walled gasoline USTs, one 1,000-gallon double-walled used-oil UST, three dispenser islands, associated double-walled product and vent piping; and two hydraulic lifts were removed from the site. On November 10, 2005, a release was reported for the site based on analytical results of soil samples collected during monitoring well installation in October 2005. Monitoring wells were installed following a divestment assessment in January 2005. From January 2005 to November 2009, eleven soil borings, sixteen monitoring wells, and three SVE wells were installed at the site. Based on analytical results of soil samples collected during monitoring well installation in October 2005, BTEX and Mt BE were detected in at least one soil sample. According to the SWRCB Geotracker website, a leak was originally discovered and reported at the site November 10, 2005 (Geotracker, 2009). The leak was stopped January 31, 2006, prior to conducting UST removal activities. Based on analytical results of historical soil and groundwater samples collected, existing sources of petroleum hydrocarbons do not appear to be present. Based on historical and recent soil analytical results, further assessment northeast of monitoring well MW-15 and

west of monitoring well MW-16 is warranted. Site History/Release Information: A Mobil service station operated at the site until 2006. January & October 2005 - Divestment assessments identified soil and groundwater (gw) impacts. The site was entered into LOP for further assessment in December 2005. February 2006: The four USTs (1-10,000-gal gasoline, 2-8,000-gal gasoline, and 1-1,000-gal used-oil USTs), three dispenser islands, associated piping, two hydraulic hoists, and clarifier were removed. All soil samples collected below the USTs, dispensers, product lines, lifts, and clarifier were non-detect for TPH, BTEX, MtBE, and TBA. Pea gravel was excavated (450 yds³) from the piping and dispensers, tested, and hauled off-site as construction debris. Assessment: January 2005 - Nine soil borings (B-1 through B-9) were advanced near the fuel and waste oil USTs and dispenser islands and inside the building near the hoists and clarifier. Soil samples had minimal impacts with most samples at or below the laboratory detection limits. October 2005 Three gw monitoring wells (MW1, MW2, and MW3) were installed in the southern part of the property near the USTs and southern dispensers. GW was present at approximately 54 feet below grade (ft bg). Again, most soil samples were not impacted, however, samples collected near the water table had detections up to 14.2 ppb B, 14.5 ppb T, 15.4 ppb E, 169 ppb X (MW 1-40), 4200 ppb MTBE (MW 3-45). GW from all three wells was impacted with concentrations up to: 1070 ppb TPHg, 6.85 ppb B, 43.3 ppb T, 3.82 ppb E, 243 ppb X, 1250 ppb MtBE, and 199 ppb TBA (MW1). Subsurface: Sand and silty sand from surface to approximately 40 ft bg, clays and silts from 40 to 50 ft bg, and sand, silty sands, and clay from approximately 50 to 70 ft bg. 2006 Following the removal of the USTs, two additional on-site gw monitoring wells (MW-4 and MW-8), one soil vapor extraction (SVE) well (SVE-1) and three off-site gw monitoring wells (MW-5 through MW-7) were installed to further assess the soil and gw. Soil samples from SVE-1 (in the former UST cavity) were impacted from 25 ft bg to the bottom of the borehole at 40 ft bg, with the highest detections at 30 and 40 ft bg: 5100 ppm TPHg, 1300 ppb B, 120000 ppb T, 75000 ppb E, 540000 ppb X, 8900 ppb MtBE, 36000 ppb TBA, and 47000 ppb Naphthalene. The highest GW concentrations were also detected in the former UST cavity in MW-8: 1100 ppb TPHg, 7.7 ppb B, 65 ppb T, 14 ppb E, 190 ppb X, and 820 ppb MtBE. GW was not impacted in the three off-site wells drilled in Magnolia Avenue. 2009 Six on-site gw monitoring wells (MW-9 through MW-14) and two off-site monitoring wells (MW-15 and MW-16) were installed along the western property boundary, in the northern and eastern areas of the property, and in the parking area along Miller Street to further assess hydrocarbon impacts. Soil sampling showed a few very low detections at and below the water table. All of the monitoring wells were impacted with the highest concentrations in

MW-10 (6100 ppb TPHg, 1500 ppb B, 40 ppb MtBE, and 13 ppb TBA). October 2010 Two additional gw monitoring wells (MW-19 & MW-20) were installed off-site in Miller Street. TPHg and VOCs were not detected above laboratory reporting limits in soil samples collected from both boreholes. GW samples had detections up to 190 ppb TPHg (MW-20) and 150 ppb MtBE (MW-19). November 2010 Four Hydropunch borings (HP-1 through HP-4) were advanced along the eastern property boundary to further assess gw conditions to the east. GW was encountered at approximately 57 ft bg and gw grab samples from HP-1 and HP-3 had detections up to 2800 ppb TPHg (HP-3), 1.4 ppb B (HP-1), and 13 ppb MtBE (HP-1). GW samples from HP-2 and HP-4 were at or below the detection limits for all constituents. May 2013 Two on-site air sparge (AS)/SVE wells were installed (B13/AS/SVE4 and B14/AS/SVE5) in the northern part of the site. All soil samples from 5 ft to 65 ft bg were at or below the detection limits for all constituents tested except B14 at 60-ft (12 ppb B). July to October 2013 - Four off-site Hydropunch borings (B15 through B18) were advanced north of the site to further assess gw downgradient of MW19 and north/crossgradient of MW14. Borings were located in Arlington Park (B15), in Miller Street (B17 and B18) and in Van Buren Blvd (B16). GW was encountered at approximately 56 to 57 ft bg. Soil samples were collected at 5 ft intervals to total depth with the only detections at the capillary fringe (55-ft bg) in B16 (1.6 ppm TPHg and 21 ppb B) and B17 (1500 ppm TPHg, ND B, 6.9 ppm 1,2,4-TMB, and 5.7 ppm 1,3,5-TMB). GW samples from these two locations were also impacted with up to 9100 ppb TPHg (B16), 1100 ppb B (B17), 310 ppb T (B17), 1400 ppb E (B17), 4500 ppb X (B17), 85 ppb MtBE (B17), 1700 ppb 1,2,4-TMB (B16), 520 ppb 1,3,5-TMB (B16), and 400 ppb Naphthalene (B17). 2014 - Two off-site GW monitoring wells (B19/MW21 and B20/MW22) were installed in Miller St. and Van Buren Blvd. based on the gw detections in the Hydropunch samples in these areas. Soil samples at the capillary fringe had some detections (26 ppb B (B19@55), 230 ppb X (B19@55), 200 ppm TPHg (B20@55) and 11 ppb MtBE (B19@55)). GW samples were at or below the detection limits for constituents tested. GW assessment was considered complete. Remediation: Pilot Testing/Remediation Well Installation: 2006 / 2007 SVE feasibility testing was conducted using SVE-1 for extraction. A total of 11 pounds of vapor-phase VOCs were recovered with maximum vapor concentrations of 4800 ppmv TPHg, 7.8 ppmv B, and 57 ppmv MTBE. The SVE radius of influence (ROI) was calculated to be 35 ft. and it was determined that SVE was a feasible remedial technology. Two additional SVE wells (SVE-2 and SVE-3) were subsequently installed as part of the remediation system design. SVE Remediation: January 2008 to June 2008 A SVE system was installed to remediate soil impacts in the source area, primarily between 30 and 40 ft bg. The system operated approximately 6 months prior to

SOURCE: CA State Water Resources Control Board

encountering mechanical issues forcing early shut down. Vapors were extracted continuously from SVE-1, and wells SVE-2 and SVE-3 were added after vapor concentrations declined in SVE-1. The system removed 522 lbs. VOChex, 1834 lbs. VOCf, 1.3 lbs. B, 19.1 lbs. T, 9.5 lbs. E, 39 lbs. X and 6.3 lbs. MtBE. GW Overpurging: November 2010 to March 2012 Wells MW-4, MW-9 and MW-10 were overpurged on a monthly basis to further reduce gw impacts. A total of 7405 gallons of gw were purged. SVE Remediation: November 2010 to April 2013 SVE operations were re-started in November 2010 using wells MW4, MW9, MW10, MW11, MW12, MW13, MW14, SVE1, SVE2 and SVE3 and continued operation until April 2013. AS/SVE Remediation: June to December 2013 Following the installation of wells AS/SVE4 and AS/SVE5, combined AS/SVE operations were implemented for approximately 6 months. The system was then shut down for rebound testing in December 2013. The test results were favorable and the system was permanently turned off. The cumulative mass removed from the site was 2233 lbs VOCHEx, 1.885 lbs B, 35.9 lbs T, 6.598 lbs MtBE. Groundwater Monitoring GW monitoring has been conducted since 2005. The depth to gw has fluctuated from approximately 54 to 60 ft bg and is currently (Sept. 2015) approximately 57 ft bg. The gw flow direction has been variable, but generally northwest to southwest. Highest gw impacts at the site have been near the former USTs and to the north of the former station building with maximum concentrations of: 8100 ppb TPHg (MW-10), 3100 ppb B (MW-10), 1400 ppb MtBE (MW-8) and 430 ppb TBA (MW-8). The gw plume has been adequately assessed and concentrations have decreased to the current (Sept. 2015) maximum detections of: 1470 ppb TPHg (MW19), 7.29 ppb B ((MW19), 19.8 ppb MTBE (MW10), and ND<10 ppb TBA. Case closure evaluation based on the SWRCBs Low-Threat UST Case Closure Policy: General Criteria Criteria MET: a. The unauthorized release is located within the service area of a public water system (City of Riverside) b. The unauthorized release consists of only petroleum c. The unauthorized release has been stopped (USTs, piping & dispensers removed 2006) d. Free product has been removed to the maximum extent possible (never detected) e. A conceptual site model that assesses the nature, extent and mobility of the release has been developed f. Secondary source has been removed to the maximum extent possible (SVE, AS/SVE, Overpurging) g. Soil and groundwater have been tested for MTBE h. A nuisance does not exist at the site, as defined by the Water Code Section 13050 1. Media-Specific Criteria: Groundwater Criteria MET: Groundwater Specific Scenario 1.2: The contaminant plume shows a decreasing trend and: The contaminant plume that exceeds water quality objectives is <250 feet in length. There is no free product. The nearest existing water supply well or surface water body is >1,000 feet from the defined plume boundary. The dissolved concentration of benzene is

<3,000 a%g/L. The dissolved concentration of MTBE is <1,000 a%g/L. 2. Media Specific Criteria: Petroleum Vapor Intrusion to Indoor Air Criteria MET: Petroleum Vapor Intrusion to Indoor Air Specific Criteria 2a Scenario 2: Unweathered LNAPL in Soil - The bioattenuation zone is a continuous zone that provides a separation of at least 30 feet both laterally and vertically between the LNAPL in soil and the foundation of existing or potential buildings, and total TPH are <100 mg/kg throughout the entire depth of the bioattenuation zone. 3. Media Specific Criteria: Direct Contact and Outdoor Air Exposure Criteria MET: Direct Contact and Outdoor Air Exposure Criteria Scenario 3.1: Maximum concentrations of petroleum constituents in soil are less than or equal to those listed on table for the specified depth bg. Mass remaining in-situ: estimated 7 lb TPHg, 0 lb B,T,X,E,MTBE,& TBA (Q1-2012 Kleinfelder) Property Redevelopment: After being vacant for numerous years, the property was recently redeveloped and a Sonic Drive-In restaurant operates at the site. Although soil in the area of the restaurant building was not impacted, a GeoSeal vapor intrusion barrier was installed beneath the restaurant slab. Further, samples from the soil excavated during construction activities were non-detect for all constituents tested. NOTE: This closure summary does not include all of the data for this cleanup. It was prepared by the Riverside County DEH for the purpose of providing a brief summary of the cleanup case. All environmental documents pertaining to this site should be reviewed to obtain further details.

Name: J & R FAST FUEL / FORMER QUALITY GAS
Address: 9407 MAGNOLIA AVE
City,State,Zip: RIVERSIDE, CA 92503
Lead Agency: SANTA ANA RWQCB (REGION 8)
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0606500430
Global Id: T0606500430
Latitude: 33.9216731675053
Longitude: -117.445223038098
Status: Open - Eligible for Closure
Status Date: 08/01/2020
Case Worker: CFM
RB Case Number: 083302716T
Local Agency: Not reported
File Location: Local Agency
Local Case Number: 95865
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: ***Data prior to 2005 does not appear in GeoTracker. Consult agency file for all site data*** On July 19, 1995, four soil borings were drilled at the Site (B 1 through B4) to assess the lateral and vertical extent of petroleum hydrocarbons beneath the Site. The soil borings were advanced to final depths of approximately 15 to 25 feet bgs. TPHg was detected in borings B 1 and B2 at concentrations of up to 790 ppm and 8,000 ppm, respectively. The site was placed into LOP. On October 30, 1997, three soil borings were drilled at the Site (B5 through B7) in order to further assess the lateral and vertical extent of petroleum hydrocarbons beneath the site. The soil borings were advanced to final depths of approximately 45 to 50 feet bgs. Soil boring B5 was placed immediately east of the 6,000-gallon gasoline UST. Soil boring B6 was positioned west of the 4,000-gallon gasoline UST, and soil boring B7 was situated immediately north northeast of the 10,000-gallon gasoline UST. TPHg was detected in all three soil borings, but most notably in B5 at concentrations of up to 22,600 ppm. Methyl tertiary butyl ether (MTBE) was detected in soil samples at concentrations of up to 12.1 ppm. Groundwater was encountered in soil borings B5 through B7 at depths ranging from 48 feet to 50 feet bgs. On November 16, 1999, five USTs, one diesel fuel dispenser, four fuel dispensers and related product piping were removed from the site. The five USTs consisted of one 4,000-gallon gasoline UST, one 4,000-gallon diesel UST, one 6,000-gallon gasoline UST, one 10,000-gallon gasoline UST and one 250-gallon waste-oil UST. Soil beneath the USTs and adjoining fuel dispensers was impacted by

SOURCE: CA State Water Resources Control Board

TPHg, TPHd, BTEX and MTBE. MW1 through MW5 were installed January 4, 5 and 6, 2005. Borings extended to final depths of approximately 61.5 feet. The wells were screened between 40 and 60 feet bgs. TPHg in the soil ranged from non-detect to 1,600 ppm. Benzene in the soil from MW1 through MW3 ranged from non-detect to 4.1 ppm. Benzene was not detected in borings MW4 and MW5. MTBE ranged from non-detect to 1.8 ppm. TBA ranged from non-detect to 1.5 ppm. Between April 2 and 5, 2007, five groundwater monitoring wells (MW6 through MW 10) and four dual-nested vapor extraction wells (VEW1 through VEW4) were installed. Soil borings MW6 through MW10 were drilled to 61.5 to 66.5 feet bgs. MW6 was screened from 40 to 65 feet bgs and MW7 through MW 10 were screened from 40 to 60 feet bgs. VEW1 through VEW4 were converted into dual-nested vapor extraction wells. VEW1 was screened from 18 to 28 and 35 to 45. VEW2 through VEW4 were screened from 15 and 25 feet bgs and 35 and 45 feet bgs. Concentrations of TPHg, BTEX, and MTBE were detected in some of the soil samples TBA was not detected. On March 4, 2008, three vapor extraction tests were conducted at the site using vapor extraction wells VEW 1 (shallow and deep) and MW2 as extraction wells. The estimated ROI for Test 1 was approximately 47 feet. The estimated ROI for Test 2 was approximately 41 feet. The estimated ROI for Test 3 was approximately 40 feet. A total of approximately 241 pounds (39.9 gallons) of volatile petroleum hydrocarbons were removed during Tests 1 through 3. Soil borings MW11 through MW13 and air sparge wells AS1 and AS2 were drilled July 6 and 8, 2009 and August 6, 2009 to final depths of approximately 61.5 feet bgs (MW11 through MW13), and approximately 65.5 feet bgs (AS1 and AS2). Groundwater monitoring wells MW11 through MW13 were screened from 40 to 60 feet bgs. Air sparge wells AS1 and AS2 were screened from 62.5 to 65 feet bgs. TPHg was detected in one soil sample at 26 ppm. BTEX and oxygenates were not detected. 2 soil samples were taken ~3.5 bgs on Jan. 28, 2010, one under a dispenser and one beneath adjacent product piping. Samples were taken using a hand auger. No TPHg, BTEX, oxygenates, or VOCs were detected. An air sparge test was completed Feb. 17, 2010 on AS1. AS1 is screened from 62.5 to 65, ~12 below WL. The zone of influence was estimated to be 15. Groundwater mounding was not observed. It was determined that AS1 was partially screened in clay layer at ~64. The petroleum hydrocarbons in the groundwater are amenable to remediation by air sparging. Groundwater samples were taken quarterly from February 2005. Maximum contaminants were 27000 ppb TPHg, 16000 ppb benzene, 6700 ppb toluene, 1400 ppb ethylbenzene, 5700 ppb xylenes, 13000 ppb MTBE, and 1700 ppb TBA. SVE system installed and became operational in August 2020. Approximately 2877 lbs recovered 3rd Qtr. 2020/

Database Descriptions

NPL: NPL National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices. NPL - National Priority List Proposed NPL - Proposed National Priority List Sites.

NPL Delisted: Delisted NPL The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Delisted NPL - National Priority List Deletions

CERCLIS: SEMS SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL. SEMS - Superfund Enterprise Management System

NFRAP: SEMS-ARCHIVE SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site. SEMS-ARCHIVE - Superfund Enterprise Management System Archive

RCRA COR ACT: CORRACTS CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. CORRACTS - Corrective Action Report

RCRA TSD: RCRA-TSDF RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste. RCRA-TSDF - RCRA - Treatment, Storage and Disposal

RCRA GEN: RCRA-LQG RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. RCRA-LQG - RCRA - Large Quantity Generators RCRA-SQG - RCRA - Small Quantity Generators. RCRA-VSQG - RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators).

Federal IC / EC: US ENG CONTROLS A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. US ENG CONTROLS - Engineering Controls Sites List US INST CONTROLS - Institutional Controls Sites List.

Database Descriptions

ERNS: ERNS Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances. ERNS - Emergency Response Notification System

State/Tribal NPL: RESPONSE Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. RESPONSE - State Response Sites

State/Tribal CERCLIS: ENVIROSTOR The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites. ENVIROSTOR - EnviroStor Database

State/Tribal SWL: SWF/LF (SWIS) Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites. SWF/LF (SWIS) - Solid Waste Information System

INDIAN UST R9 - Underground Storage Tanks on Indian Land.

Database Descriptions

State/Tribal VCP: VCP Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs. VCP - Voluntary Cleanup Program Properties SAN FRANCISCO MAHER - Maher Ordinance Property Listing.

US Brownfields: US BROWNFIELDS Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs. US BROWNFIELDS - A Listing of Brownfields Sites

Other SWF: LOS ANGELES CO. LF WMUDS/SWAT - Waste Management Unit Database. VENTURA CO. LF - Inventory of Illegal Abandoned and Inactive Sites. CA LA LF - City of Los Angeles Landfills. SAN DIEGO CO. LF - Solid Waste Facilities. Ventura County Inventory of Closed, Illegal Abandoned, and Inactive Sites. SAN DIEGO CO. LF - Inventory of Illegal Abandoned and Inactive Sites

Other Haz Sites: SCH This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose. SCH - School Property Evaluation Program SAN DIEGO CO. HMMMD - Hazardous Materials Management Division Database. CERS HAZ WASTE - CERS HAZ WASTE. US CDL - Clandestine Drug Labs. PFAS - PFAS Contamination Site Location Listing. AQUEOUS FOAM - Former Fire Training Facility Assessments Listing.

Other Tanks: SWEEPS UST Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list. SWEEPS UST - SWEEPS UST Listing ALAMEDA CO. UST - Underground Tanks. KERN CO. UST - Underground Storage Tank Sites & Tank Listing. MARIN CO. UST - Underground Storage Tank Sites. NAPA CO. UST - Closed and Operating Underground Storage Tank Sites. ORANGE CO. UST - List of Underground Storage Tank Facilities. RIVERSIDE CO. UST - Underground Storage Tank Tank List. SAN FRANCISCO CO. UST - Underground Storage Tank Information. SOLANO CO. UST - Underground Storage Tanks. SUTTER CO. UST - Underground Storage Tanks. VENTURA CO. UST - Underground Tank Closed Sites List. LOS ANGELES UST - Active & Inactive UST Inventory. YOLO CO. UST - Underground Storage Tank Comprehensive Facility Report. EL SEGUNDO UST - City of El Segundo Underground Storage Tank. LONG BEACH UST - City of Long Beach Underground Storage Tank. UST MENDOCINO - Mendocino County UST Database. TORRANCE UST - City of Torrance Underground Storage Tank. UST SAN JOAQUIN - San Joaquin Co. UST. LOS ANGELES AST - Active & Inactive AST Inventory. SAN FRANCISCO AST - Aboveground Storage Tank Site Listing. CERS TANKS - California Environmental Reporting System (CERS) Tanks. CA FID UST - Facility Inventory Database.

Local Land Records: DEED Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners. DEED - Deed Restriction Listing

Database Descriptions

Spills: HMIRS Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT. HMIRS - Hazardous Materials Information Reporting System CHMIRS - California Hazardous Material Incident Report System. Orange Co. Industrial Site - List of Industrial Site Cleanups. SPILLS 90 - SPILLS90 data from FirstSearch.

Other: RCRA NonGen / NLR RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste. RCRA NonGen / NLR - RCRA - Non Generators / No Longer Regulated FEDLAND - Federal and Indian Lands. TSCA - Toxic Substances Control Act. TRIS - Toxic Chemical Release Inventory System. SSTS - Section 7 Tracking Systems. RAATS - RCRA Administrative Action Tracking System. PRP - Potentially Responsible Parties. PADS - PCB Activity Database System. ICIS - Integrated Compliance Information System. FTTS - FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act). FTTS INSP - FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act). MLTS - Material Licensing Tracking System. RADINFO - Radiation Information Database. BRS - Biennial Reporting System. INDIAN RESERV - Indian Reservations. US AIRS (AFS) - Aerometric Information Retrieval System Facility Subsystem (AFS). APPENDIX D
USER QUESTIONNAIRE

USER QUESTIONNAIRE (ASTM-1527-05)

Project Number: 000-22

User (print): MR. MIKE SADEGHIAN

Property Address:
3596 VAN BUREN BLVD.
RIVERSIDE, CA 92503

User (sign): *George H. ... for Mr. Mike Sadeghian*

Date: 10/4/22

PLEASE COMPLETE/SIGN

In Order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

Yes No

(1) Environmental cleanup liens that are filed or reported against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the property that are filed or recorded under the federal, tribal, state or local law?

Yes No

(2) Activity and land use limitations (AUL) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Yes No

(3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes No

(4) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29)

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Yes No

USER QUESTIONNAIRE (ASTM-1527-05)

(6) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of release or threatened releases? For example, as user,

(a.) Do you know the past uses of the property?
ORCHARDS, RESIDENTIAL, GAS STATION
AUTO REPAIR

(b.) Do you know of specific chemicals that are present or once were present at the property?
CHEMICALS USED IN AUTO REPAIR

(c.) Do you know of spills or other chemical releases that have taken place at the property?

(d.) Do you know of any environmental cleanups that have taken place at the property?

(6) The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

1.0 INTRODUCTION

This report presents the results of a Phase II Environmental Site Assessment - Geophysical Survey and Soil and Soil Vapor Investigation performed by Athanor Environmental Services, Inc. (Athanor) of La Crescenta, CA, of the real property located at 3596 Van Buren Boulevard, Riverside, CA 92503. Figure 1 locates the property on a map of the local vicinity. This project was performed for and under the direction of Mr. Mike Sadeghian.

The purpose of this investigation was conducted in order to (1) identify and locate any underground storage tank(s), (2) identify any significant concentrations of aromatic and chlorinated hydrocarbon volatile organic compounds (VOCs) present in the subsurface soil vapor and (3) identify any significant concentrations petroleum hydrocarbons present in the subsurface soil.

This investigation was not intended to be a public health evaluation of any kind, nor was it a certification that the entire site is either free from, or significantly affected by, environmental contamination. Rather, this investigation should be considered a support to any decision making process involving the property.

Athanor has sought to convey the results of this investigation to Mr. Sadeghian in a way that is practical, useful, and in accordance with accepted scientific and/or engineering practice and protocols. Athanor and its subcontractors assume no liability from any of the individuals interviewed or other parties involved or from losses sustained as a result of decisions based on interpretations of this report.

● Location of Subject Site

FIGURE 1. LOCAL VICINITY MAP

2.0 BACKGROUND

The site is an auto repair shop and was previously a gasoline service station. Underground storage tanks (USTs) were located onsite in conjunction with past service station operation. There is an in-ground hydraulic lift located outside, in back of the auto repair shop. An in-ground lift was previously located inside the shop. It has been removed and replaced with an aboveground lift. There are no records of either UST or lift removal or subsequent soil sampling and laboratory analysis.

3.0 LOCAL AND REGIONAL GEOLOGY AND HYDROGEOLOGY

3.1 Regional Physiographic and Geologic Conditions

The subject Site and vicinity are located in the northeast portion of the Arlington Valley within the Transverse Ranges geomorphic province. The broad Arlington Valley is bounded by the Jurupa Mountains on the north, the Box Springs Mountains on the southeast, Arlington Mountain on the south, the Santa Ana Mountains to the southwest, and the La Sierra Hills and Mount Rubidoux on the northwest. The Site is situated at an approximate elevation of 800 feet above mean sea level on terrain that slopes gently downward to the northwest toward the Santa Ana River (USGS, 1980).

The Arlington Valley is underlain by several thousands of feet of alluvium and associated deposits of Recent or Pleistocene age. The surficial unit underlying the site is “younger” alluvial fan material of Quaternary age (California Division of Mines and Geology, 1969). These sediments consist of unconsolidated, poorly stratified to well-stratified clay, silt, sand, and gravel on streambed deposits and alluvial fans. The immediately underlying subsoils were deposited by alluvial processes during the past 11,000 years (Holocene Epoch) and originate in the hills surrounding the site area.

3.2 Soil Conditions

Soils in the area of the subject property are mapped as Hanford coarse sandy loam (USDA, 1978). Soils of the Hanford series formed on alluvial fans in alluvium derived from granite. The Hanford coarse sandy loam is characterized as well drained and moderately rapidly to rapidly permeable. In a typical profile, a coarse sandy loam surface layer about 8 inches thick is underlain by fine sandy loam to a depth of 40 inches. The substratum is stratified loamy sand to coarse sandy loam to a depth of 60 inches or more.

3.3 Groundwater Conditions

The subject site is located west-centrally within the Upper Santa Ana Valley Groundwater Basin, Riverside-Arlington Sub-basin (California Department of Water Resources, 2003). This sub-basin is bound by impermeable rocks of Box Springs Mountains on the southeast, Arlington Mountain on the south, La Sierra Heights and Mount Rubidoux on the northwest, and the Jurupa Mountains on the north. The northeast boundary is formed by the Rialto-Colton fault, and a portion of the northern boundary is a groundwater divide beneath the city of Bloomington. The Santa Ana River flows over the northern portion of the sub-basin.

The water-bearing materials are dominantly composed of Quaternary age alluvial deposits consisting of sand, gravel, silt, and clay deposited by the Santa Ana River and its tributaries. Near the City of Riverside, the upper 50 feet of deposits are principally clay; however, deposits near the City of Arlington have considerable sand and little clay. The Riverside-Arlington Sub-basin is replenished by infiltration from Santa Ana River flow, underflow past the Rialto-Colton fault, intermittent underflow from the Chino Sub-basin, return irrigation flow, and deep percolation of precipitation.

Groundwater moves northwest near Arlington, then flows southwest to Arlington Gap, through which it flows into the Temescal Sub-basin. Site-specific groundwater data is not available. According to groundwater elevation data from 1997 (Wildermuth Environmental, 2000), the depth to groundwater was approximately 40 feet below ground surface in the vicinity of the Site, and the direction of the groundwater gradient was to the west-northwest.

4.0 GEOPHYSICAL SURVEY

On September 16, 2022, a geophysical survey was conducted of a portion of the subject site. The purpose of the investigation was to search for and locate any underground storage tanks (USTs). The areas of interest included the entire site outside the auto shop building. The vertical gradient magnetics method was employed to delineate areas where large buried objects, representative of USTs, could be buried. Magnetics data was collected with a magnetometer and a conductible

The geophysical survey did not detect a positive-negative anomaly, the magnetic signature of a UST. Therefore, the USTs have been removed. Magnetics data indicated the presence of product line piping from a concrete cutout, the apparent location of USTs, to a former fuel pump island with a canopy in front of the auto repair shop. This piping (three separate parallel piping runs) was painted on the ground from the apparent UST cutout to the former fuel dispenser island.

5.0 SOIL VAPOR SAMPLING PROGRAM

5.1 General Discussion

Soil vapor aromatic and chlorinated hydrocarbon volatile organic compound (VOC) contamination can be detected by analyzing trace gases in soil just below grade surface. This technique is possible because VOCs will volatilize from the liquid phase in the soil to the vapor phase in soil vapor and move by molecular diffusion away from source areas toward regions of lower concentrations. A gas vapor concentration gradient from the source to adjacent areas is established. Any significant VOC concentration(s) in the subsurface soil vapor would be detected.

Underground Service Alert's Digalert Service located all underground utility lines prior to the subject investigation.

5.2 Soil Vapor Sampling Probe Installation

On September 23, 2022 Athanor, together with its subcontractor, Environmental Support Technologies of Irvine, CA, conducted a soil vapor investigation of the site. The purpose of the study was to examine the property for any potential environmental impairment liability from a release or releases of VOCs to the subsurface. Mr. George Johnson, Athanor's Project Manager, was present for all field activities.

VOC releases are very volatile and tend to migrate laterally and vertically in the vapor phase, the void space around the soil particulates. On July 5, 2022 a total of six soil borings were located onsite and five soil vapor probes were installed at depths of five feet below grade surface (bgs), as shown in Figure 2 - Soil/Soil Vapor Sampling Diagram. Soil vapor probes were installed at regular intervals at the presumed UST cutout, along the product lines, and at the other side (west) of the former pump island, Soil Vapor Probes SV-1 through SV6. An apparent water line break was

Van Buren Boulevard

Pritmrose Drive

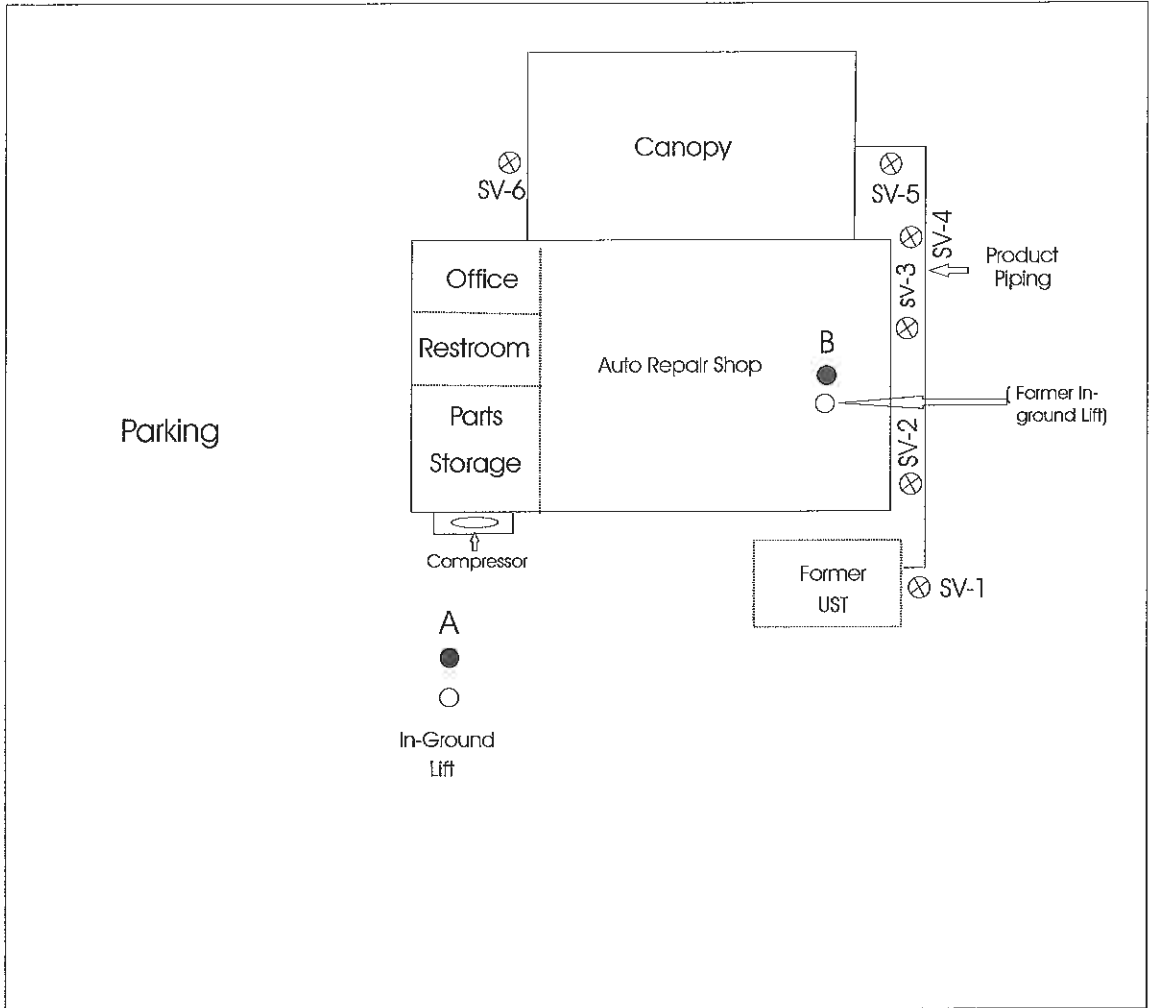

FIGURE 2. SOIL AND SOIL VAPOR SAMPLING DIAGRAM

observed near Soil Vapor Probe SV-5, which had to be moved and resampled in order to avoid water contact. One-inch diameter soil vapor probes were installed at depths of 5.0 feet bgs and soil vapor samples were collected.

The asphalt and concrete were penetrated with an electric concrete drill. Once each rod was advanced to the desired depth, 0.25-inch Nylaflo tubing with a clean implant filter was installed. One foot of clean sand was installed around the implant filter and the remaining annulus was filled with hydrated dry granular bentonite.

Subsurface soil conditions at this site consisted predominantly of silty-sand from ground surface to 12.0 feet bgs.

5.3 Soil Vapor Sample Collection and Handling

After waiting two hours after each probe was installed for the soil vapor concentrations to stabilize around the sampling tip, a soil vapor sample was collected from each soil vapor probe at depth. At each sampling location, an electric vacuum pump, set to draw 200 milliliters per minute of soil vapor at a maximum vacuum of 100 inches of water, was attached to the probe and purged prior to sample collection. Vapor samples were collected after purging three tubing volumes from the probes in Gas-Tight syringes.

Once the soil vapor sampling was completed, the soil vapor samples and chain-of-custody document were delivered to an onsite mobile laboratory for analysis.

6.0 SOIL SAMPLING PROGRAM

On September 23, 2022, Athanor, together with its subcontractor, Environmental Support Technologies, conducted subsurface soil sampling. Two soil borings, Boring A and Boring B were located onsite. Boring A was located next to the in-ground hydraulic lift located outside, as shown in Figure 2. Boring B was located next to the former in-ground hydraulic lift in the auto shop (where an above ground lift is now located), as shown in Figure 2. Each boring was advanced to a depth of 12 feet bgs, with soil samples collected at depths of 10 and 12 feet bgs from each boring.

Each soil sample was collected from both borings with the Geporobe directly into an acetate liner inside a stainless steel sampling tube with no visible headspace. Each soil sample was sealed with teflon sheeting and plastic end caps, labeled, and stored on ice in a field cooler chilled with blue ice. The borings were backfilled with bentonite. There were no soil cuttings. The borings were sealed flush to grade with concrete or cold patch asphalt. The site was cleared of debris.

The soil samples and the chain-of-custody document were transported to an analytical laboratory for analysis. The chain-of-custody document is included in Appendix B.

7.0 LABORATORY METHODOLOGY AND RESULTS

7.1 Soil Vapor

All soil vapor samples collected were analyzed by an onsite mobile state-certified analytical laboratory operated by Environmental Support Technologies by EPA Method 8260B for aromatic and chlorinated hydrocarbon volatile organic compounds (VOCs). Concentrations of VOCs detected were as follows, in micrograms per cubic meter ($\mu\text{g}/\text{m}^3$):

<u>Compound</u>	<u>Soil Vapor Sample</u>					
	<u>SV-1</u>	<u>SV-2</u>	<u>SV-3</u>	<u>SV-4</u>	<u>SV-5</u>	<u>SV-6</u>
1,2,4-Trimethylbenzene	34	N.D.*	54	120	N.D.	N.D.
Benzene	140	110	N.D.	96	110	N.D.
Chloroform	N.D.	N.D.	N.D.	N.D.	44	N.D.
Ethylbenzene	56	N.D.	N.D.	84	N.D.	N.D.
m,p-Xylenes	160	48	82	320	52	32
o-Xylene	40	N.D.	N.D.	92	N.D.	N.D.
Perchloroethylene	84	40	530	220	N.D.	N.D.
Toluene	300	160	94	570	210	86

* Nothing detected.

No concentration of any other VOC was detected.

The laboratory report is included in Appendix A.

7.2 Soil

Both soil samples collected were analyzed by an state-certified analytical laboratory, TestAmerica of Irvine, CA, by EPA Method 8015 Modified for total petroleum hydrocarbons (TPH) speciated by

carbon chain range. Concentrations of total petroleum hydrocarbons detected by carbon chain range were as follows in milligrams per kilogram (mg/kg) or parts per million (ppm):

Carbon Chain Range	Soil	
	<u>Vapor Sample</u>	
	<u>A-10</u>	<u>B-10</u>
C ₄ -C ₁₂	N.D.	N.D.
C ₁₃ -C ₂₂	N.D.	7.7
C ₂₃ -C ₃₂	N.D.	11
C ₃₃ -C ₄₀	N.D.	6.0

The laboratory report is included in Appendix A.

Quality assurance and quality control (QA/QC) measures were implemented for soil sampling, handling, and laboratory analysis in order to produce data of known quality. The laboratory performing the analysis completed internal QA/QC procedures, including method blanks, surrogates, matrix spike and matrix spike duplicates, laboratory duplicates, and initial and continuing calibration checks.

8.0 CONCLUSIONS

For VOC concentrations in soil or soil vapor, it is necessary to apply California Regional Water Quality Control Board (RWQCB), San Francisco Region (adopted by RWQCB, Santa Ana Region) Tier I Environmental Screening Levels (ESLs), concentrations of hazardous chemicals in soil or soil vapor that are considered to be thresholds of concern for risks to human health. The ESLs are often used by RWQCB and other regulatory agencies to screen sites for potential human health concerns where releases of hazardous chemicals to soil have occurred. ESLs are published. The ESLs are often used by RWQCB and other regulatory agencies to screen sites for potential human health concerns where releases of hazardous chemicals to soil have occurred.

VOCs detected that exceeded their respective ESLs were as follows:

Benzene - up to 140 ug/m³ vs. ESL 3.2 ug/m³.

Chloroform - 44 (ug/m³ (one detection) vs. ESL 4.1 ug/m³, probably from drinking water, near observed water line break.

Ethylbenzene - up to 84 ug/m³ vs. ESL 37 ug/m³.

Perchloroethylene (PCE) - up to 530 ug/m³ vs. ESL 15 ug/m³.

Concentrations of benzene and ethylbenzene detected probably originated from UST and product piping operation. Concentrations of PCE detected probably originated from surficial releases of solvents and/of degreasers.

ESLs are for subslab VOCs only. Regulators are concerned about vapor intrusion from subslab VOCs into indoor breathable air, which could represent a public health threat. It is not known whether VOCs in soil vapor impact the auto repair shop. It may be necessary to collect and analyze soil vapor samples from beneath the building in order to assess the impacts of benzene, ethylbenzene, and PCE on the building.

No TPH in any carbon chain range detected is significant.

9.0 RECOMMENDATIONS

It is recommended that, in order to assess the impacts of benzene, ethylbenzene, and PCE on the auto shop building, either (1) soil vapor samples be collected from beneath the building and analyzed by a laboratory for VOCs or (2) indoor air samples be collected from inside the building and analyzed by a laboratory for VOCs.

APPENDIX A

SOIL VAPOR LABORATORY REPORT

September 23, 2022

George Johnson
Athamor Environmental Services
3940 Mayfield Avenue
La Crescenta, CA 91214
RE: 3596 Van Buren Blvd. Riverside CA. 92503

Enclosed are the results of analyses for soil gas samples received by Environmental Support Technologies laboratory on 09/22/22 14:07. The analyses were performed according to the prescribed method as outlined by EPA 8260B. A shut in test was performed, leak test was performed, equipment blank was run, and selected purge volume was 3PV. If you have any questions concerning this report, please feel free to contact Project Manager.

Sincerely,

Ashley Flores

Notes and Definitions

- QR-04 The RPD result for this analyte in the sample exceeded the QC control limits; however, the RPD for other analytes were within the QC control limits.
- J Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- RPD Relative Percent Difference

The results in this report apply to the samples analyzed. This analytical report must be reproduced in its entirety.

The test results in this report meet all 2003 NELAP, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments

No additional comments.

Receipt

The samples were received on 9/23/2022 9:45 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 21.9° C.

Receipt Exception

The samples were received at the laboratory outside the required temperature criteria. There was no cooling media present.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

November 30, 2022

Proposal No. 22-5709A

Chino Commercial Bank
14245 Pipeline Avenue
Chino, CA 91710

**Re: Limited Vapor Screening Assessment (Phase II)
Commercial Property - 3570 and 3596 Van Buren Blvd, Riverside, California**

Pinnacle Environmental, Inc. (PEI), is pleased to present this letter report of findings for a Limited Vapor Screening Assessment (Phase II) at the subject property to Chino Commercial Bank (Client) for the above-referenced subject property. The scope of work for this assessment was based on the findings and recommendation of a Phase II Environmental Site Assessment (Phase II) prepared on the property at 3596 Van Buren Blvd, dated September 30, 2022. The report was prepared by Mr. Mike Sadeghian (prospective purchaser) by Athanor Environmental Services, Inc. (Athanor).

The scope for work for the above Phase II included a geophysical survey to assess potential underground storage tanks (USTs), and the installation and sampling of six vapor probes at 5 feet below ground surface (bgs). The findings of that report were as follows (directly excerpted):

VOCs detected that exceeded their respective ESLs were as follows:

- Benzene - up to 140 $\mu\text{g}/\text{m}^3$ vs. ESL 3.2 $\mu\text{g}/\text{m}^3$.
- Chloroform - 44 $\mu\text{g}/\text{m}^3$ (one detection) vs. ESL 4.1 $\mu\text{g}/\text{m}^3$, probably from drinking water, near observed water line break
- Ethylbenzene - up to 84 $\mu\text{g}/\text{m}^3$ vs. ESL 37 $\mu\text{g}/\text{m}^3$
- Perchloroethylene (PCE) - up to 530 $\mu\text{g}/\text{m}^3$ vs. ESL 15 $\mu\text{g}/\text{m}^3$

Concentrations of benzene and ethylbenzene detected probably originated from UST and product piping operation. Concentrations of PCE detected probably originated from surficial releases of solvents and/of degreasers.

ESLs are for subslab VOCs only. Regulators are concerned about vapor intrusion from subslab VOCs into indoor breathable air, which could represent a public health threat. It is not known whether VOCs in soil vapor impact the auto repair shop. It may be necessary to collect and analyze soil vapor samples from beneath the building in order to assess the impacts of benzene, ethylbenzene, and PCE on the building. No TPH in any carbon chain range detected is significant.

It is recommended that, in order to assess the impacts of benzene, ethylbenzene, and PCE on the auto shop building, either (1) soil vapor samples be collected from beneath the building and analyzed by a laboratory for VOCs or (2) indoor air samples be collected from inside the building and analyzed by a laboratory for VOCs.

The purpose of this limited vapor screening assessment is to evaluate potential vapor intrusion concerns by volatile organic compounds (VOCs) in subslab vapor and interior air as identified in the prior Phase II assessment. Since this is a screening assessment, only subslab soil vapor and indoor/ambient air sampling was proposed. This is a screening assessment for subslab vapor and indoor/ambient air; therefore, deeper soil, vapor and groundwater sampling were not included as part of this proposed scope of work. The depth to groundwater in the vicinity of the subject property is reported at approximately 50 feet below ground surface [bgs].

This screening investigation is not intended to define the extent of potentially impacted soil, soil vapor, or groundwater at the subject property, but rather is intended to assess potential of impacts of the above-mentioned constituents in subslab vapor and indoor/ambient air at limited accessible locations at the subject property. Additionally, the report is not intended to satisfy or be submitted to regulatory agencies, or be used for official “closure” purposes. Significant additional scope requirements, cost, and turnaround time are necessary to achieve such a purpose.

LIMITATIONS

The findings of this screening assessment are based on the conditions existing at the site on November 9 and November 18, 2022 when the field samplings events when indoor/ambient air and subslab vapor sampling was performed, respectively. Data collected during different seasons (e.g., winter, summer) with different temperature and ventilation requirements may yield different analytical results. PEI’s findings and conclusions are based on data provided by the laboratory subcontractor, which is solely responsible for their own work. This assessment has been conducted and prepared in accordance with generally accepted practices and procedures exercised by reputable professionals under similar circumstances, undertaking similar studies at the same time and in the same geographical area. PEI makes no other warranties or guarantees, either expressed or implied, as to the findings, opinions, or recommendations contained in this report. This Limited Assessment was not fully comprehensive in nature but was restricted to the areas described at the subject property. The findings presented in this report were based on the subslab conditions encountered in the locations sampled during the time frame of this assessment. These findings may not be considered representative of future conditions in the areas investigated or conditions in any untested areas of the site.

It should be recognized that this study was not intended to be a definitive investigation of potential impact at the subject property. Given that the Scope of Services for this investigation was limited, it is possible that currently, unrecognized impacts (or higher levels than those found) may exist at the site. Therefore, PEI cannot act as insurers and cannot “certify” that a site is free of environmental contamination, that impact does not exist above a certain level in other areas of the site, or that some other, currently unrecognized, environmental impact does not exist at the site.

The recommendations provided in this report do not constitute legal advice and should not be relied upon in any way for legal interpretations. This report has been prepared for the sole use of the Client. This report may not be relied upon by any other party without the written authorization of PEI and the Client. The Scope of Services performed in the execution of this investigation may not be appropriate to satisfy the needs of other private users or public agencies, and any re-use of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of

said user. This report is not designed to be used for regulatory review or “closure” purposes, but simply to facilitate a real estate transaction or review.

PEI cannot evaluate the potential legal liability for the subject property owner, as it relates to impact found at the subject property.

FIELD WORK – INDOOR AIR & AMBIENT AIR TEST

Indoor and ambient air sampling was completed on November 9, 2022. PEI collected two (2) indoor air samples (IA-1 and IA-2) and one (1) ambient outdoor air sample (AA-1) from the subject site in the following locations as shown in Figure 1:

- IA-1 – Waiting room Tire Store (3596 Van Buren)
- IA-2 – Storage room of Pizzeria (3570 Van Buren)
- AA-1 – Northwest exterior corner of Tire Store (3596 Van Buren)

To collect each sample, the threaded sealing cap was removed from the top of a 6-liter Summa™ sampling canister. The canister was outfitted with a flow regulator set by the laboratory at a flow rate of approximately 10.8 milliliters per minute (ml/min) for an 8-hour sample. To initiate sampling, the valve on the sampling canister was opened to enable the entrapment of the air sample. Upon opening the valve, the initial vacuum reading was recorded on the sampling log to confirm the laboratory-induced vacuum of approximately -30 inches of mercury. After the 8-hour collection period had elapsed (or when the displacement of canister vacuums was achieved to approximately -5 inches of mercury) the sampling was considered completed and the final vacuum reading was recorded on the sampling log. The canister valve was then closed, the flow-regulator removed, and the sealing cap replaced on the canister. Once the air samples were collected, they were transported, observing formal chain-of-custody (COC) procedures to a State of California-certified testing laboratory (H&P Geochemistry in Carlsbad, CA). Each sample was analyzed for VOCs using Modified EPA Test Method TO-15.

FIELD WORK – SUBSLAB SAMPLING

Subslab vapor sampling was completed on November 18, 2022. Temporary subslab vapor probes were installed at four locations as shown in Figure 1, including one in the Pizzeria and three in the tire store at the subject property as follows:

- SS-1 – East-Central service area of Tire Store (3596 Van Buren)
- SS-2 – Southwest service area of Tire Store (3596 Van Buren)
- SS-3 – Waiting room Tire Store (3596 Van Buren)
- SS-4 – Storage room of Pizzeria (3570 Van Buren)

The soil vapor probes were constructed in general accordance with DTSC Guidelines. The probes consisted of a temporary airstone filter, 1/8" Nylaflo tubing, and a valve at the termination. The probe tip was set within a 2-3 inch sand pack with 1-3 inches dry bentonite above the sand followed by the tubing and a cap at surficial termination.

Following a 120-minute (2-hour minimum) equilibration period, the soil vapor samples were collected into gas-tight syringes in general accordance with DTSC Guidelines. At each location, a shut-in test was performed for 60 seconds and butane (shaving cream) was used as a gaseous leak check compound. An electric vacuum pump set to draw 0.2 liters per minute (L/min) of soil vapor was attached to the probe and purged prior to sample collection. Each location was purged using a default of 3 purge volumes (tubing+ 40% sand pack + 50% dry bentonite).

Vapor samples were collected from each sample location into glass syringes and analyzed in an on-site mobile laboratory for volatile organic compounds (VOCs) by EPA Method 8260B with detection limits below commercial environmental screening levels (ESLs).

Upon completion of the vapor sampling, the temporary vapor probe was removed, and the slab was patched with concrete.

FINDINGS – INDOOR AIR

A summary of the pertinent current analytical laboratory results is summarized below and presented in full in Table 1. The complete laboratory data sheets are presented in Appendix B.

- **Benzene** was reported above laboratory detection limits in each of the three air samples submitted for analysis at concentrations ranging from 0.32 $\mu\text{g}/\text{m}^3$ (AA-1) to 0.81 $\mu\text{g}/\text{m}^3$ (IA-1);
- **Toluene** was reported above laboratory detection limits in each of the three air samples submitted for analysis at concentrations ranging from 0.95 $\mu\text{g}/\text{m}^3$ (AA-1) to 2.7 $\mu\text{g}/\text{m}^3$ (IA-1);
- **Ethylbenzene** was reported above laboratory detection limits each of the three air samples submitted for analysis at concentrations ranging from 0.32 $\mu\text{g}/\text{m}^3$ (AA-1) to 0.81 $\mu\text{g}/\text{m}^3$ (IA-1);
- **Xylenes** (total) were reported above laboratory detection limits in each of the three air samples submitted for analysis at concentrations ranging from 0.91 $\mu\text{g}/\text{m}^3$ (A-1) to 3.35 $\mu\text{g}/\text{m}^3$ (IA-1);
- **Chloromethane** was reported above laboratory detection limits in each of the three air samples submitted for analysis at concentrations ranging from 1.8 $\mu\text{g}/\text{m}^3$ (IA-2) to 1.9 $\mu\text{g}/\text{m}^3$ (AA-1);
- **Methylene Chloride** was reported above laboratory detection limits in each of the three air samples submitted for analysis at concentrations ranging from 0.39 $\mu\text{g}/\text{m}^3$ (IA-1) to 0.7 $\mu\text{g}/\text{m}^3$ (IA-1);
- **Chloroform** was reported above laboratory detection limits in one of the three air samples submitted for analysis at a concentration of 1.2 $\mu\text{g}/\text{m}^3$ (IA-2);
- **Carbon Tetrachloride** was reported above laboratory detection limits in each of the three air samples submitted for analysis at concentrations ranging from 0.64 $\mu\text{g}/\text{m}^3$ (IA-2 and AA-1) to 0.65 $\mu\text{g}/\text{m}^3$ (OA-1);
- **Dichlorodifluoromethane (F12)** was reported above laboratory detection limits in each of the three air samples submitted for analysis at concentrations ranging from 2.2 $\mu\text{g}/\text{m}^3$ (IA-2 and AA-1) to 2.4 $\mu\text{g}/\text{m}^3$ (IA-1);
- **Trichlorofluoromethane (F11)** was reported above laboratory detection limits in each of the three air samples submitted for analysis at a concentration of 2.0 $\mu\text{g}/\text{m}^3$ (IA-1, IA-2 & AA-1);
- No other pertinent contaminants of concern (COCs) were reported above laboratory detection limits in any of the samples submitted for analysis.

FINDINGS – SUBSLAB VAPOR

Vapor samples were analyzed for a VOCs via EPA Method 8260. A summary of the pertinent current analytical laboratory results is summarized below and presented in full in Table 2. The complete laboratory data sheets are presented in the appendix.

- ◆ **Tetrachloroethene (PCE):** Soil vapor samples from the two subslab samples, SS1 (SS1 Dup) and SS2, contained PCE above laboratory detection limits at concentrations ranging from 17 to 18 $\mu\text{g}/\text{m}^3$, respectively. Concentrations detected do not exceed the commercial ESL of 67 $\mu\text{g}/\text{m}^3$.

Based on the data collected, none of the constituents detected (e.g., PCE) in subslab vapor concentrations exceed commercial ESLs. The subslab vapor data indicated no other VOC constituents were detected at concentrations above laboratory detection limits.

DISCUSSION OF ANALYTICAL RESULTS

The main objective of this investigation was to assess the potential for vapor intrusion concerns related to concentrations of potential contaminants of concern (PCOCs) including benzene, chloroform, ethylbenzene, and perchloroethylene (PCE) that were detected in a September 2022 assessment that included shallow 5-foot vapor samples.

Subslab PCE

PCE was detected in the two subslab vapor samples, SS1 and SS2, proximal to the two-stage clarifier that was observed in the southern service bay. It was not detected in the subslab samples in the waiting room (SS3) or Pizzeria (SS4). The PCE data are generally consistent with the locations of the prior PCE vapor concentrations reported at 5 feet bgs in the September 2022 assessment. No other VOCs were detected above laboratory detection limits in the subslab vapor data.

Indoor Air

Indoor and ambient air data presented in Table 1 indicate benzene, chloroform, and carbon tetrachloride were detected in one or more samples at concentrations slightly exceeding their respective residential Environmental Screening Levels (ESLs). Benzene and chloroform exceed commercial ESLs in IA-1 and IA-2, respectively as follows:

IA-1 (tire shop waiting room) - Benzene at 0.81 $\mu\text{g}/\text{m}^3$, with a commercial ESL of 0.42 $\mu\text{g}/\text{m}^3$

IA- 2 (Pizzeria storage room) – Chloroform at 1.2 $\mu\text{g}/\text{m}^3$, with a commercial ESL of 0.53 $\mu\text{g}/\text{m}^3$

ESLs are guidelines established by the Regional Water Quality Control Board (RWQCB). By definition, any detected concentration found to be below its corresponding ESL can be assumed not to pose a significant threat to human health, water resources, or the environment. Meanwhile, a

chemical at concentrations exceeding ESLs, does not necessarily represent an immediate threat to human health. Rather, additional investigations may be warranted.

Benzene in IA-1

Benzene was detected in each of the three indoor/ambient air samples at concentrations of 0.81, 0.36 and 0.32 ug/m³ (IA-1, IA-2, and AA-1, respectively). Only IA-1 exceeded the commercial ESL of 0.41 ug/m³. Benzene was not detected in subslab samples at concentrations above laboratory detection limits of 3.0 ug/m³. However, benzene was observed as present in four of six vapor samples collected at 5 feet below ground surface (bgs) during a September 2022 sampling event conducted on behalf of Mr. Sadeghian. Those concentrations ranged from 96 to 140 ug/m³.

No obvious indications of on-site chemicals were present in the waiting room (sample location of IA-1) that could cause interference with the indoor air data. However, the location of IA-1 within an automotive repair facility causes the potential for being influenced by automotive repair/exhaust within the service bays. Since benzene was not detected in three subslab samples (including the waiting room, SS3) within the tire shop building, it is not conclusive that benzene concentrations observed in IA-1 are the result of vapor intrusion. Furthermore, according to one study from the *World Health Organization (WHO) Guidelines for Indoor Air Quality*, the median indoor air concentration of benzene within the United States is between 2.6-5.8 µg/m³ (WHO, 2010). This further indicates that the detected benzene concentrations are likely ambient background concentrations and not the result of vapor intrusion.

Chloroform in IA-2

Chloroform was detected in the indoor air sample within the pizzeria storage room (IA-2) at 1.2 µg/m³. This exceeds the commercial ESL of 0.53 µg/m³. No chloroform was detected above laboratory detection limits in the subslab vapor sample or the other indoor/ambient air samples (IA-1 or AA-1). However, chloroform was observed as present in one of six vapor samples (SV-5 at 44 ug/m³) collected at 5 feet below ground surface (bgs) during a September 2022 assessment.

Since chloroform was not detected in any of the four subslab samples (including the pizzeria storage room, SS4) or within the tire shop building, it is not conclusive that the chloroform concentration observed in the Pizzeria storage room (IA-2) is the result of vapor intrusion.

Conclusions

The following conclusions are based upon review of prior environmental reports, interpretation of analytical data, and field measurements collected during the November 9 and 17, 2022, sampling events:

- Two indoor air and one outdoor/ambient air sample were successfully collected over an 8-hour period as part of this investigation. Each of the samples was analyzed by a State Certified laboratory for the presence of VOCs.
- While PCE was detected in subslab vapor samples, it was not detected in indoor air or ambient air samples at concentrations above laboratory detection limits.

- The indoor air sampling results show that benzene (IA-1, tire shop waiting room) and chloroform (IA-2, pizzeria storage room) were each detected at concentrations exceeding commercial ESLs, respectively.
- Neither benzene nor chloroform was detected above laboratory detection limits in any of the four subslab vapor sample locations, including those proximal to the indoor air sample locations (e.g., SS1 and SS4). Therefore, it is not conclusive that benzene or chloroform concentrations observed in IA-1 or IA-2, respectively, are the result of vapor intrusion from releases at the tire store property.
- Concentrations exceeding ESLs, do not necessarily represent an immediate threat to human health, but rather, that additional investigation may be warranted. However, since benzene and chloroform were not detected in subslab data proximal to the sample location, both benzene and chloroform concentrations may be from external ambient sources rather than subsurface impact.
- Based on the data collected, a current vapor intrusion concern does not appear to exist related to the current commercial use of the 3570 and 3596 Van Buren Boulevard structures. However, should the property be redeveloped, additional assessment or mitigation measures may be required to address future vapor concerns that were identified in shallow vapor in the September 2022 assessment.

Certification

To the best of our knowledge, all statements made in this report are true and correct. This report is based on data provided by the client and others, site conditions observed, samples collected and analytical data. No warranty whatsoever is made that this report all contamination on the site.

Respectfully submitted,

Peter K Cloven, EP, CEM
Project Manager

ANALYTICAL REPORT & CHAIN OF CUSTODY

15 November 2022

Peter Cloven
Pinnacle Environmental
739 Black Point Place
Clayton, CA 94517

H&P Project: PI111122-12
Client Project: 22-5709 / Riverside -Van Buren

Dear Peter Cloven:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 11-Nov-22 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Kristin Beckley for:
Lisa Eminhizer
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP and the National Environmental Laboratory Accreditation Conference (NELAC) for the fields of proficiency and analytes listed on those certificates. H&P is approved as an Environmental Testing Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs for the fields of proficiency and analytes included in the certification process and to the extent offered by the accreditation agency. Unless otherwise noted, accreditation certificate numbers, expiration of certificates, and scope of accreditation can be found at: www.handpmg.com/about/certifications. Fields of services and analytes contained in this report that are not listed on the certificates should be considered uncertified or unavailable for certification.

ANALYTICAL REPORT FOR SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
IA-1	E211025-01	Vapor	09-Nov-22	11-Nov-22
IA-2	E211025-02	Vapor	09-Nov-22	11-Nov-22
AA-1	E211025-03	Vapor	09-Nov-22	11-Nov-22

The percent recoveries of 2-Butanone and Styrene fell below the method criteria in the CCV. Any results for these analytes may be biased low.

The percent recovery of Hexachlorobutadiene fell above the method criteria in the CCV. Samples in the associated batch were Non-Detect (ND) for this analyte.
